

1	Some Background and Basics	1
	Why Spectroscopy?	1
	What Is a Transmission Grating?.....	2
	How Does a Grating Work? (The Short Version!).....	3
	Dispersion	4
	Resolution	4
	Diffraction Gratings	5
	Grating Resolution.....	7
	Is a Grating Good for Visual Observing?	7
	Which Telescope to Use?.....	8
	Can I Use Any Camera?.....	9
	Camera Resolution and Pixel Size.....	10
	What Else Do You Need to Get Started?	10
	Image Capture Software	11
	Seeing Conditions and Their Effects	11
	Summary	12
2	Imaging a Spectrum with the Grating	13
	How Do We Use the Grating?.....	13
	Using the Grating in a Converging Beam	14
	Imaging Your First Spectrum	16
	Signal-to-Noise Ratio (SNR).....	20
	Image Size on the CCD Chip	20
	Drift Enlarging.....	21
	Summing Up.....	22

Objective Gratings on the Front of Your Camera Lens	22
Objective Gratings with DSLR Cameras.....	27
CCD-Type Cameras	29
Webcams and Video.....	29
Quick Bit of Theory: Dispersion/Plate Scale and Resolution.....	29
Dispersion.....	29
Plate Scale	30
Resolution.....	30
Summary	30
3 My First Spectrum: What Else Can I Record?.....	33
A Brief Introduction to Star Classification	35
Stellar Temperatures: Great Balls of Fire!	38
Star Stuff	39
Emission Stars (Be and Shell Stars).....	40
Wolf-Rayet Stars (WR).....	42
Variable Stars/Nova and Supernovae	42
Nebulae	45
Redshift/Quasars	47
Planetary Spectroscopy	48
Meteor Spectra	48
What About the Sun?	51
4 Processing Spectra	53
Software Overview.....	53
Preparing the Raw Image File for Processing	54
Using IRIS to Pre-process	56
The Pixel Profile Graph Using an Image Profile and Spreadsheet.....	57
Spectral Processing Software Options	60
Visual Spec (VSpec).....	61
Standard Stellar Spectra	61
Standard Element Lines.....	61
Obtaining a Pixel Profile Graph Using <i>VSpec</i>	68
Wavelength Calibration.....	69
Wavelength Calibration Using the Zero Order Image.....	69
Wavelength Calibration Using Two Lines.....	72
Wavelength Calibration Using One Line and a Known Dispersion	72
Instrument/Camera Response	73
Correcting Spectra Using the Instrument/Camera Response Curve	75
Identification of Lines and Features	75
Resolution.....	76
Normalized Spectrum.....	77
Continuum Removal.....	77
Creating Additional Stellar Reference Profiles	77
Signal to Noise Ratio (SNR)	77

5 Improving Your Grating Spectroscope	79
Adding a Slit for Solar Spectrum/Reference Lamps.....	79
The Slit Tube	80
Alternative Solar Slit: The Reflective Needle	80
Solar Spectrum.....	81
Astronomical Filters.....	84
Adding a Slit for Deep Sky Objects.....	85
Using the Grating Behind an Eyepiece (Point and Shoot Camera?).....	88
Other Types of Transmission Gratings	89
Making a CCD Adaptor for a Camera Lens	92
Other Grating Spectroscopes	93
Weight and Length	94
The Size of the Collimator Lens.....	94
The Size of the Grating	95
Camera Lens.....	95
Summary Points	96
Adding a Slit	97
Measuring the Slit Gap	98
Living Without a Zero Order Image	99
Watkis Transmission Spectroscope.....	100
Other Transmission Spectroscope Designs.....	101
Guiding Slit Spectroscopes	102
 6 Some Technical (Nice to Know) Stuff.....	105
Star Magnitudes and Star Brightness.....	105
Harry Nyquist, Claude Shannon and Bryce Bayer	108
Pixel Size	109
CCD Chip Size	110
Quantum Efficiency (QE)	110
Instrument and Camera Response Versus Recorded Spectra.....	113
Signal to Noise Ratio (SNR).....	114
Grating Theory (The Heavy Bits!).....	115
Dispersion, Plate Scale and Resolution (The Long Answer).....	116
Reducing Aberration: Adding a Grism	120
Field Curvature	121
Spectral Coma	121
Non Linearity of the Spectrum	124
 7 Spectral Analysis: A Bit of Theory	127
Kirchhoff's Laws	127
Blackbody Radiation.....	128
Quantum Theory	129
Forbidden Lines: Ionization.....	131
Doppler/Redshifts	133

Stellar Classification: What You Need to Know	134
HD Classifications	134
The MKK Spectral Sequence.....	135
Luminosity Classes.....	136
Suffixes and Prefixes Used in Spectral Classifications.....	136
The H-R Diagram	137
Standard Spectral Lines and Reference Spectra	138
Reference Spectra.....	138
Standard Spectral Lines.....	139
Other Useful Spectral Reference Lines.....	141
Fraunhofer Lines	141
Nebula Emission Lines.....	142
O ₂ and H ₂ O Atmospheric Telluric Lines	142
Common Light Pollution Lines.....	142
Conclusion	143
 Appendices.....	 145
Appendix A: The Greek Alphabet	145
Appendix B: The Brightest Stars.....	146
Appendix C: The Brightest Be Stars	147
Appendix D: The Brightest Wolf-Rayet (WR) Stars	148
Appendix E: The Brightest Red and Carbon Stars	149
Appendix F: Suppliers of Spectroscope Gratings and Accessories	150
Appendix G: Spectroscopy Forums.....	152
For Further Information	153
 Glossary	 157
Index.....	165
