Preface	vii
Acknowledgments	ix
1. INTRODUCTION	1
1.1 Driver Assistance Systems	2
1.2 Active Stability Control Systems	2
1.3 Ride Quality	4
1.4 Technologies for Addressing Traffic Congestion	5
1.4.1 Automated highway systems	6
1.4.2 “Traffic-friendly” adaptive cruise control	6
1.4.3 Narrow tilt-controlled commuter vehicles	7
1.5 Emissions and Fuel Economy	9
1.5.1 Hybrid electric vehicles	10
1.5.2 Fuel cell vehicles	11
References	11

2. LATERAL VEHICLE DYNAMICS	15
2.1 Lateral Systems Under Commercial Development	15
2.1.1 Lane departure warning	16
2.1.2 Lane keeping systems	17
2.1.3 Yaw stability control systems	18
2.2 Kinematic Model of Lateral Vehicle Motion	20
2.3 Bicycle Model of Lateral Vehicle Dynamics	27
2.4 Motion of Particle Relative to a Rotating Frame	31
2.5 Dynamic Model in Terms of Error with Respect to Road	34
2.6 Dynamic Model in Terms of Yaw Rate and Slip Angle	37
2.7 From Body Fixed to Global Coordinates	39
2.8 Road Model	41
2.9 Chapter Summary	43
Nomenclature	44
References	45
3. STEERING CONTROL FOR AUTOMATED LANE KEEPING	47
3.1 State Feedback	47
3.2 Steady State Error from Dynamic Equations	50
3.3 Understanding Steady State Cornering	54
3.3.1 Steering angle for steady state cornering	54
3.3.2 Can the yaw-angle error be zero?	58
3.3.3 Is non-zero yaw angle error a concern?	59

<i>Contents</i>	xiii
3.4 Consideration of Varying Longitudinal Velocity	60
3.5 Output Feedback	62
3.6 Unity Feedback Loop System	63
3.7 Loop Analysis with a Proportional Controller	65
3.8 Loop Analysis with a Lead Compensator	71
3.9 Simulation of Performance with Lead Compensator	75
3.10 Analysis of Closed-Loop Performance	76
3.10.1 Performance variation with vehicle speed	76
3.10.2 Performance variation with sensor location	78
3.11 Compensator Design with Look-Ahead Sensor Measurement	80
3.12 Chapter Summary	81
Nomenclature	82
References	84
4. LONGITUDINAL VEHICLE DYNAMICS	87
4.1 Longitudinal Vehicle Dynamics	87
4.1.1 Aerodynamic drag force	89
4.1.2 Longitudinal tire force	91
4.1.3 Why does longitudinal tire force depend on slip?	93
4.1.4 Rolling resistance	95
4.1.5 Calculation of normal tire forces	97
4.1.6 Calculation of effective tire radius	99
4.2 Driveline Dynamics	101

4.2.1 Torque converter	102
4.2.2 Transmission dynamics	104
4.2.3 Engine dynamics	106
4.2.4 Wheel dynamics	107
4.3 Chapter Summary	109
Nomenclature	109
References	111
5. INTRODUCTION TO LONGITUDINAL CONTROL	113
5.1 Introduction	113
5.1.1 Adaptive cruise control	114
5.1.2 Collision avoidance	115
5.1.3 Automated highway systems	115
5.2 Benefits of Longitudinal Automation	116
5.3 Cruise Control	118
5.4 Upper Level Controller for Cruise Control	119
5.5 Lower Level Controller for Cruise Control	122
5.5.1 Engine torque calculation for desired acceleration	123
5.5.2 Engine control	125
5.6 Anti-Lock Brake Systems	126
5.6.1 Motivation	126
5.6.2 ABS functions	129
5.6.3 Deceleration threshold based algorithms	130

<i>Contents</i>	xv
5.6.4 Other logic based ABS control systems	134
5.6.5 Recent research publications on ABS	135
5.7 Chapter Summary	136
Nomenclature	136
References	137
6. ADAPTIVE CRUISE CONTROL	141
6.1 Introduction	141
6.2 Vehicle Following Specifications	143
6.3 Control Architecture	144
6.4 String Stability	146
6.5 Autonomous Control with Constant Spacing	147
6.6 Autonomous Control with the Constant Time-Gap Policy	150
6.6.1 String stability of the CTG spacing policy	151
6.6.2 Typical delay values	153
6.7 Transitional Trajectories	156
6.7.1 The need for a transitional controller	156
6.7.2 Transitional controller design through $R - \dot{R}$ diagrams	158
6.8 Lower Level Controller	164
6.9 Chapter Summary	165
Nomenclature	166
References	167
Appendix 6.A	168

7. LONGITUDINAL CONTROL FOR VEHICLE PLATOONS	171
7.1 Automated Highway Systems	171
7.2 Vehicle Control on Automated Highway Systems	172
7.3 Longitudinal Control Architecture	173
7.4 Vehicle Following Specifications	175
7.5 Background on Norms of Signals and Systems	176
7.5.1 Norms of signals	176
7.5.2 System norms	177
7.5.3 Use of induced norms to study signal amplification	178
7.6 Design Approach for Ensuring String Stability	181
7.7 Constant Spacing with Autonomous Control	182
7.8 Constant Spacing with Wireless Communication	185
7.9 Experimental Results	188
7.10 Lower Level Controller	190
7.11 Adaptive Controller for Unknown Vehicle Parameters	191
7.11.1 Redefined notation	191
7.11.2 Adaptive controller	192
7.12 Chapter Summary	195
Nomenclature	196
References	197
Appendix 7.A	199

<i>Contents</i>	xvii
8. ELECTRONIC STABILITY CONTROL	201
8.1 Introduction	201
8.1.1 The functioning of a stability control system	201
8.1.2 Systems developed by automotive manufacturers	203
8.1.3 Types of stability control systems	203
8.2 Differential Braking Systems	204
8.2.1 Vehicle model	204
8.2.2 Control architecture	208
8.2.3 Desired yaw rate	209
8.2.4 Desired side-slip angle	210
8.2.5 Upper bounded values of target yaw rate and slip angle	211
8.2.6 Upper controller design	213
8.2.7 Lower Controller design	217
8.3 Steer-By-Wire Systems	218
8.3.1 Introduction	218
8.3.2 Choice of output for decoupling	219
8.3.3 Controller design	222
8.4 Independent All Wheel Drive Torque Distribution	224
8.4.1 Traditional four wheel drive systems	224
8.4.2 Torque transfer between left and right wheels using a differential	225
8.4.3 Active control of torque transfer to all wheels	226

8.5 Need for Slip Angle Control	228
8.6 Chapter Summary	235
Nomeclature	235
References	239
9. MEAN VALUE MODELING OF SI AND DIESEL ENGINES	241
9.1 SI Engine Model Using Parametric Equations	242
9.1.1 Engine rotational dynamics	243
9.1.2 Indicated combustion torque	243
9.1.3 Friction and pumping losses	244
9.1.4 Manifold pressure equation	245
9.1.5 Outflow rate \dot{m}_{ao} from intake manifold	246
9.1.6 Inflow rate \dot{m}_{ai} into intake manifold	246
9.2 SI Engine Model Using Look-Up Maps	248
9.2.1 Introduction to engine maps	248
9.2.2 Second order engine model using engine maps	252
9.2.3 First order engine model using engine maps	253
9.3 Introduction to Turbocharged Diesel Engines	255
9.4 Mean Value Modeling of Turbocharged Diesel Engines	256
9.4.1 Intake manifold dynamics	257
9.4.2 Exhaust manifold dynamics	257
9.4.3 Turbocharger dynamics	257
9.4.4 Engine crankshaft dynamics	258

<i>Contents</i>	xix
9.4.5 Control system objectives	259
9.5 Lower Level Controller with SI Engines	260
9.6 Chapter Summary	262
Nomenclature	262
References	264
10. DESIGN AND ANALYSIS OF PASSIVE AUTOMOTIVE SUSPENSIONS	267
10.1 Introduction to Automotive Suspensions	267
10.1.1 Full, half and quarter car suspension models	267
10.1.2 Suspension functions	270
10.1.3 Dependent and independent suspensions	271
10.2 Modal Decoupling	273
10.3 Performance Variables for a Quarter Car Suspension	274
10.4 Natural Frequencies and Mode Shapes for the Quarter Car	276
10.5 Approximate Transfer Functions Using Decoupling	278
10.6 Analysis of Vibrations in the Sprung Mass Mode	283
10.7 Analysis of Vibrations in the Unsprung Mass Mode	285
10.8 Verification Using the Complete Quarter Car Model	286
10.8.1 Verification of the influence of suspension stiffness	286
10.8.2 Verification of the influence of suspension damping	288
10.8.3 Verification of the influence of tire stiffness	290
10.9 Half-Car and Full-Car Suspension Models	292

10.10 Chapter Summary	298
Nomenclature	298
References	300
11. ACTIVE AUTOMOTIVE SUSPENSIONS	301
11.1 Introduction	301
11.2 Active Control: Trade-Offs and Limitations	304
11.2.1 Transfer functions of interest	304
11.2.2 Use of the LQR Formulation and its relation to H_2 -Optimal Control	304
11.2.3 LQR formulation for active suspension design	306
11.2.4 Performance studies of the LQR controller	307
11.3 Active System Asymptotes	313
11.4 Invariant Points and Their Influence on the Suspension Problem	315
11.5 Analysis of Trade-Offs Using Invariant Points	317
11.5.1 Ride quality/ road holding trade-offs	317
11.5.2 Ride quality/ rattle space trade-offs	319
11.6 Conclusions on Achievable Active System Performance	320
11.7 Performance of a Simple Velocity Feedback Controller	321
11.8 Hydraulic Actuators for Active Suspensions	323
11.9 Chapter Summary	325
Nomenclature	326
References	327

<i>Contents</i>	xxi
12. SEMI-ACTIVE SUSPENSIONS	329
12.1 Introduction	329
12.2 Semi-Active Suspension Model	331
12.3 Theoretical Results: Optimal Semi-Active Suspensions	333
12.3.1 Problem formulation	333
12.3.2 Problem definition	335
12.3.3 Optimal solution with no constraints on damping	336
12.3.4 Optimal solution in the presence of constraints	339
12.4 Interpretation of the Optimal Semi-Active Control Law	340
12.5 Simulation Results	342
12.6 Calculation of Transfer Function Plots with Semi-Active Systems	345
12.7 Performance of Semi-Active Systems	347
12.7.1 Moderately weighted ride quality	347
12.7.2 Sky hook damping	349
12.8 Chapter Summary	352
Nomenclature	352
References	353
13. LATERAL AND LONGITUDINAL TIRE FORCES	355
13.1 Tire Forces	355
13.2 Tire Structure	357
13.3 Longitudinal Tire Force at Small Slip Ratios	359

13.4 Lateral Tire Force at Small Slip Angles	362
13.5 Introduction to the Magic Formula Tire Model	365
13.6 Development of Lateral Tire Model for Uniform Normal Force Distribution	367
13.6.1 Lateral forces at small slip angles	368
13.6.2 Lateral forces at large slip angles	371
13.7 Development of Lateral Tire Model for Parabolic Normal Pressure Distribution	375
13.8 Combined Lateral and Longitudinal Tire Force Generation	381
13.9 The Magic Formula Tire Model	385
13.10 Dugoff's Tire Model	389
13.10.1 Introduction	389
13.10.2 Model equations	390
13.10.3 Friction circle interpretation of Dugoff's model	390
13.11 Dynamic Tire Model	392
13.12 Chapter Summary	393
Nomenclature	393
References	395
14. TIRE-ROAD FRICTION MEASUREMENT ON HIGHWAY VEHICLES	397
14.1 Introduction	397
14.1.1 Definition of tire-road friction coefficient	397
14.1.2 Benefits of tire-road friction estimation	398

14.1.3	Review of results on tire-road friction coefficient estimation	399
14.1.4	Review of results on slip-slope based approach to friction estimation	399
14.2	Longitudinal Vehicle Dynamics and Tire Model for Friction Estimation	401
14.2.1	Vehicle longitudinal dynamics	401
14.2.2	Determination of the normal force	402
14.2.3	Tire model	403
14.2.4	Friction coefficient estimation for both traction and braking	404
14.3	Summary of Longitudinal Friction identification Approach	408
14.4	Identification Algorithm Design	409
14.4.1	Recursive least-squares (RLS) identification	409
14.4.2	RLS with gain switching	410
14.4.3	Conditions for parameter updates	412
14.5	Estimation of Accelerometer Bias	412
14.6	Experimental Results	415
14.6.1	System hardware and software	415
14.6.2	Tests on dry concrete road surface	416
14.6.3	Tests on concrete surface with loose snow covering	418
14.6.4	Tests on surface consisting of two different friction levels	419
14.6.5	Hard braking test	421

14.7 Chapter Summary	422
Nomenclature	423
References	424
15. ROLL DYNAMICS AND ROLLOVER PREVENTION	427
15.1 Rollover Resistance Rating for Vehicles	427
15.2 One Degree of Freedom Roll Dynamics Model	433
15.3 Four Degrees of Freedom Roll Dynamics Model	440
15.4 Rollover Index	444
15.5 Rollover Prevention	448
15.6 Chapter Summary	453
Nomenclature	453
References	455
16. DYNAMICS AND CONTROL OF HYBRID GAS ELECTRIC VEHICLES	457
16.1 Types of Hybrid Powertrains	458
16.2 Powertrain Dynamic Model	461
16.2.1 Dynamic Model for Simulation of a Parallel Gas-Electric Hybrid Vehicle	461
16.2.2 Dynamic Model for Simulation of a Power-Split Hybrid Vehicle	464
16.3 Background on Control Design Techniques for Energy Management	469
16.3.1 Dynamic Programming Overview	469
16.3.2 Model Predictive Control Overview	473

<i>Contents</i>	xxv
16.3.3 Equivalent Consumption Minimization Strategy	478
16.4 Driving Cycles	480
16.5 Performance Index, Constraints and System Model Details for Control Design	482
16.6 Illustration of Control System Design for a Parallel Hybrid Vehicle	486
16.7 Chapter Summary	488
Nomenclature	488
References	490
Index	493
