

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	What Is It All About?	1
1.2	Principles and Assumptions	5
1.3	Layout	7
1.4	A Model Problem	9
1.4.1	A Path-Independent Integral	13
1.4.2	Orthogonality of the “Primal” and “Dual” Eigenfunctions	14
1.4.3	Particular Solutions	15
1.4.4	Curved Boundaries Intersecting at the Singular Point	17
1.5	The Heat Conduction Problem: Notation	17
1.6	The Linear Elasticity Problem: Notation	20
<b>2</b>	<b>An Introduction to the p- and hp-Versions of the Finite Element Method</b>	<b>27</b>
2.1	The Weak Formulation	27
2.2	Discretization	29
2.2.1	Blending Functions, the Element Stiffness Matrix and Element Load Vector	31
2.2.2	The Finite Element Space	32
2.2.3	Mesh Design for an Optimal Convergence Rate	36
2.3	Convergence Rates of FEMs and Their Connection to the Regularity of the Exact Solution	36
2.3.1	Algebraic and Exponential Rates of Convergence	38
<b>3</b>	<b>Eigenpair Computation for Two-Dimensional Heat Conduction Singularities</b>	<b>47</b>
3.1	Overview of Methods for Computing Eigenpairs	47
3.2	Formulation of the Modified Steklov Eigenproblem	49
3.2.1	Homogeneous Dirichlet Boundary Conditions	53

3.2.2	The Modified Steklov Eigen-problem for the Laplace Equation with Homogeneous Neumann BCs .....	54
3.3	Numerical Solution of the Modified Steklov Weak Eigenproblem by p-FEMs .....	54
3.4	Examples on the Performance of the Modified Steklov Method .....	58
3.4.1	A Detailed Simple Example .....	58
3.4.2	A Crack with Homogeneous Newton BCs (Laplace Equation) .....	63
3.4.3	A V-Notch in an Anisotropic Material with Homogeneous Neumann BCs. ....	65
3.4.4	An Internal Singular Point at the Interface of Two Materials .....	66
3.4.5	An Anisotropic Flux-Free Bimaterial Interface .....	70
<b>4</b>	<b>GFIFs Computation for Two-Dimensional Heat Conduction Problems .....</b>	<b>73</b>
4.1	Computing GFIFs Using the Dual Singular Function Method .....	73
4.2	Computing GFIFs Using the Complementary Weak Form .....	76
4.2.1	Derivation of the Complementary Weak Form .....	76
4.2.2	Using the Complementary Weak Formulation to Extract GFIFs .....	79
4.2.3	Extracting GFIFs Using the Complementary Weak Formulation and Approximated Eigenpairs .....	84
4.3	Numerical Examples: Extracting GFIFs Using the Complementary Weak Form .....	86
4.3.1	Laplace equation with Newton BCs .....	87
4.3.2	Laplace Equation with Homogeneous Neumann BCs: Approximate eigenpairs .....	89
4.3.3	Anisotropic Heat Conduction Equation with Newton BCs .....	92
4.3.4	An Internal point at the Interface of Two Materials .....	93
<b>5</b>	<b>Eigenpairs for Two-Dimensional Elasticity .....</b>	<b>97</b>
5.1	Asymptotic Solution in the Vicinity of a Reentrant Corner in an Isotropic Material .....	98
5.2	The Particular Case of TF/TF BCs .....	106
5.2.1	A TF/TF Reentrant Corner (V-Notch) .....	107
5.2.2	A TF/TF Crack .....	111
5.2.3	A TF/TF Crack at a Bimaterial Interface .....	115
5.3	Power-Logarithmic or Logarithmic Singularities with Homogeneous BCs .....	121
5.4	Modified Steklov Eigenproblem for Elasticity .....	122
5.4.1	Numerical Solution by p-FEMs .....	126

5.4.2	Numerical Investigation: Two Bonded Orthotropic Materials.....	129
5.4.3	Numerical Investigation: Power-Logarithmic Singularity .....	131
<b>6</b>	<b>Computing Generalized Stress Intensity Factors (GSIFs) .....</b>	<b>133</b>
6.1	The Contour Integral Method, Also Known as the Dual-Singular Function Method or the Reciprocal Work Contour Method .....	133
6.1.1	A Path-Independent Contour Integral .....	133
6.1.2	Orthogonality of the Primal and Dual Eigenfunctions ....	135
6.1.3	Extracting GSIFs ( $A_I$ 's) Using the CIM.....	137
6.2	Extracting GSIFs by the Complementary Energy Method (CEM) .....	142
6.3	Numerical Examples: Extracting GSIFs by CIM and CEM.....	147
6.3.1	A Crack in an Isotropic Material: Extracting SIFs by the CIM and CEM .....	147
6.3.2	Crack at a Bimaterial Interface: Extracting SIFs by the CEM .....	149
6.3.3	Nearly Incompressible L-Shaped Domain: Extracting SIFs by the CEM .....	152
<b>7</b>	<b>Thermal Generalized Stress Intensity Factors in 2-D Domains .....</b>	<b>157</b>
7.1	Classical (Strong) and Weak Formulations of the Linear Thermoelastic Problem .....	158
7.1.1	The Linear Thermoelastic Problem .....	158
7.1.2	The Complementary Energy Formulation of the Thermoelastic Problem.....	161
7.1.3	The Extraction Post-solution Scheme .....	162
7.1.4	The Compliance Matrix, Load Vector and Extraction of TGSIFs.....	163
7.1.5	Discretization and the Numerical Algorithm .....	165
7.2	Numerical Examples .....	166
7.2.1	Central Crack in a Rectangular Plate .....	166
7.2.2	A Slanted Crack in a Rectangular Plate .....	171
7.2.3	A Rectangular Plate with Cracks at an Internal Hole ....	172
7.2.4	Singular Points Associated with Multimaterial Interfaces .....	178
<b>8</b>	<b>Failure Criteria for Brittle Elastic Materials .....</b>	<b>185</b>
8.1	On Failure Criteria Under Mode I Loading .....	188
8.1.1	Novozhilov-Seweryn Criterion .....	188
8.1.2	Leguillon's Criterion .....	190
8.1.3	Dunn et al. Criterion .....	191
8.1.4	The Strain Energy Density (SED) Criterion.....	191

8.2	Materials and Experimental Procedures .....	196
8.2.1	Experiments with Alumina-7%Zirconia .....	196
8.2.2	Experiments with PMMA .....	200
8.3	Verification and Validation of the Failure Criteria .....	203
8.3.1	Analysis of the Alumina-7%Zirconia Test Results .....	205
8.3.2	Analysis of the PMMA Tests .....	207
8.4	Determining Fracture Toughness of Brittle Materials	
	Using Rounded V-Notched Specimens .....	210
8.4.1	The Failure Criterion for a Rounded V-Notch Tip .....	211
8.4.2	Estimating the Fracture Toughness From	
	Rounded V-Notched Specimens .....	212
8.4.3	Experiments on Rounded V-Notched	
	Specimens in the Literature .....	214
8.4.4	Estimating the Fracture Toughness .....	216
<b>9</b>	<b>A Thermoelastic Failure Criterion at the Micron Scale</b>	
	<b>in Electronic Devices</b> .....	221
9.1	The SED Criterion for a Thermoelastic Problem .....	224
9.2	Material Properties .....	227
9.2.1	Material Properties of Passivation Layers .....	228
9.2.2	Aluminum Lines and Dielectric Layers .....	230
9.3	Experimental Validation of the Failure Criterion .....	230
9.3.1	Computing SEDs by p-Version FEMs .....	231
<b>10</b>	<b>Singular Solutions of the Heat Conduction (Scalar)</b>	
	<b>Equation in Polyhedral Domains</b> .....	237
10.1	Asymptotic Solution to the Laplace Equation	
	in a Neighborhood of an Edge .....	240
10.2	A Systematic Mathematical Algorithm for the Edge	
	Asymptotic Solution for a General Scalar Elliptic Equation .....	246
10.2.1	The Eigenpairs and Computation of Shadow	
	Functions .....	247
10.2.2	Eigenfunctions, their Shadow Functions and	
	Duals for Cases 1-4 (Dirichlet BCs) .....	249
10.2.3	The Primal and Dual Eigenfunctions and	
	Shadows for Case 5 (Dirichlet BCs) .....	254
10.3	Eigenfunctions, Shadows and Duals for Cases 1-5 with	
	Homogeneous Neumann Boundary Conditions .....	257
<b>11</b>	<b>Extracting Edge-Flux-Intensity Functions (EFIFs)</b>	
	<b>Associated with Polyhedral Domains</b> .....	265
11.1	Extracting Pointwise Values of the EFIFs by the $L^2$	
	Projection Method .....	265
11.1.1	Numerical Implementation .....	268
11.1.2	An Example Problem and Numerical Experimentation ..	270
11.2	The Energy Projection Method .....	273

11.3	A Quasidual Function Method (QDFM) for Extracting EFIFs ....	275
11.3.1	Jacobi Polynomial Representation of the Extraction Function.....	277
11.3.2	Jacobi Extraction Polynomials of Order 2.....	279
11.3.3	Analytical Solutions for Verifying the QDFM .....	279
11.3.4	Numerical Results for (BC <sub>4</sub> ) Using $K_2^{(\alpha_1)}$ .....	280
11.3.5	A Nonpolynomial EFIF .....	282
11.3.6	A Domain with Edge and Vertex Singularities .....	285
<b>12</b>	<b>Vertex Singularities for the 3-D Laplace Equation .....</b>	<b>291</b>
12.1	Analytical Solutions for Conical Vertices .....	292
12.1.1	Homogeneous Dirichlet BCs.....	294
12.1.2	Homogeneous Neumann BCs.....	295
12.2	The Modified Steklov Weak Form and Finite Element Discretization .....	297
12.2.1	Application of p/Spectral Finite Element Methods .....	301
12.3	Numerical Examples .....	303
12.3.1	Conical Vertex, $\omega/2 = 3\pi/4$ , Homogeneous Neumann BCs .....	303
12.3.2	Conical Vertex, $\omega/2 = 3\pi/4$ , Homogeneous Dirichlet BCs .....	304
12.3.3	Vertex at the Intersection of a Crack Front with a Flat Face, Homogeneous Neumann BCs.....	306
12.3.4	Vertex at the Intersection of a V-Notch Front with a Conical Reentrant Corner, Homogeneous Neumann BCs.....	307
12.4	Other Methods for the Computation of the Vertex eigenpairs, and Extensions to the Elasticity System .....	307
12.4.1	Extension of the Method to the Elasticity System .....	311
<b>13</b>	<b>Edge EigenPairs and ESIFs of 3-D Elastic Problems.....</b>	<b>315</b>
13.1	The Elastic Solution for an Isotropic Material in the Vicinity of an Edge .....	317
13.1.1	Differential Equations for 3-D Eigenpairs.....	317
13.1.2	Boundary Conditions for the Primal, Dual and Shadow Functions .....	321
13.1.3	Primal and Dual Eigenfunctions and Shadow Functions for a Traction-Free Crack .....	322
13.1.4	Primal and Dual Eigenfunctions and Shadow Functions for a Clamped $3\pi/2$ V-notch .....	329
13.2	Extracting ESIFs by the $J[R]$ -Integral .....	333
13.2.1	Jacobi Extraction Polynomials of Order 4.....	335
13.2.2	Numerical Example: A Cracked Domain ( $\omega = 2\pi$ ) with Traction-Free Boundary Conditions.....	337

13.2.3	Numerical Example: A Clamped V-notched Domain ( $\omega = \frac{3\pi}{2}$ ) .....	339
13.2.4	Numerical Example of Engineering Importance: Compact Tension Specimen.....	340
13.3	Eigenpairs and ESIFs for Anisotropic and Multimaterial Interfaces .....	346
13.3.1	Computing Eigenpairs.....	352
13.3.2	Computing Complex Primal and Dual Shadow Functions.....	357
13.3.3	Difficulties in Computing Shadows and Remedies for Several Pathological Cases .....	360
13.3.4	Extracting Complex ESIFs by the QDFM.....	364
13.3.5	Numerical Example: A Crack at the Interface of Two Isotropic Materials .....	366
13.3.6	Numerical Example: CTS, Crack at the Interface of Two Anisotropic Materials .....	371
<b>14</b>	<b>Remarks on Circular Edges and Open Questions</b> .....	<b>377</b>
14.1	Circular Singular Edges in 3-D Domains: The Laplace Equation .....	377
14.1.1	Axisymmetric Case, $\partial_{\theta\theta}\tau \equiv 0$ .....	379
14.1.2	General Case .....	385
14.2	Circular Singular Edges in 3-D Domains: The Elasticity System .....	390
14.3	Further Theoretical and Practical Applications .....	392
<b>A</b>	<b>Definition of Sobolev, Energy, and Statically Admissible Spaces and Associated Norms</b> .....	<b>395</b>
<b>B</b>	<b>Analytic Solution to 2-D Scalar Elliptic Problems in Anisotropic Domains</b> .....	<b>401</b>
B.1	Analytic Solution to a 2-D Scalar Elliptic Problem in an Anisotropic Bimaterial Domain .....	404
B.1.1	Treatment of the Boundary Conditions .....	406
B.1.2	An Example .....	407
<b>C</b>	<b>Asymptotic Solution at the Intersection of Circular Edges in a 2-D Domain</b> .....	<b>411</b>
<b>D</b>	<b>Proof that Eigenvalues of the Scalar Anisotropic Elliptic BVP with Constant Coefficients Are Real</b> .....	<b>417</b>
<b>E</b>	<b>A Path-Independent Integral and Orthogonality of Eigenfunctions for General Scalar Elliptic Equations in 2-D Domains</b> .....	<b>421</b>

<b>F</b>	<b>Energy Release Rate (ERR) Method, its Connection to the J-integral and Extraction of SIFs.....</b>	<b>427</b>
F.1	Derivation of the ERR .....	427
F.1.1	The Energy Argument [94].....	427
F.1.2	The Potential Energy Argument [94] .....	428
F.2	Griffith's Energy Criterion [70, 71] .....	430
F.3	Relations Between the ERR and the SIFs .....	436
F.3.1	Symmetric (Mode I) Loading .....	436
F.3.2	Antisymmetric (Mode II) Loading.....	437
F.3.3	Combined (Mode I and Mode II) Loading .....	438
F.3.4	Computation of $\mathcal{G}$ by the Stiffness Derivative Method ...	438
F.3.5	The Stiffness Derivative Method for 3-D Domains .....	442
F.4	The $J$ -Integral and its Relation to ERR .....	442
	<b>References.....</b>	<b>447</b>
	<b>Index.....</b>	<b>457</b>

Singularities in Elliptic Boundary Value Problems and  
Elasticity and Their Connection with Failure Initiation  
Yosibash, Z.

2012, XXII, 462 p., Hardcover
