<b>Prologue</b> .....	xvii
-----------------------	------

## **Part I Simple Single Species Models**

<b>1 Continuous Population Models</b> .....	3
1.1 Exponential Growth .....	3
1.2 The Logistic Population Model .....	8
1.3 The Logistic Equation in Epidemiology .....	13
1.4 Qualitative Analysis .....	17
1.5 Harvesting in Population Models .....	26
1.5.1 Constant-Yield Harvesting .....	26
1.5.2 Constant-Effort Harvesting .....	28
1.6 Eutrophication of a Lake: A Case Study .....	31
1.7 Appendix: Parameters in Biological Systems .....	38
1.8 Project: The Spruce Budworm .....	42
1.9 Project: Estimating the Population of the United States .....	45
<b>2 Discrete Population Models</b> .....	49
2.1 Introduction: Linear Models .....	49
2.2 Graphical Solution of Difference Equations .....	53
2.3 Equilibrium Analysis .....	56
2.4 Period-Doubling and Chaotic Behavior .....	61
2.5 Discrete-Time Metered Models .....	67
2.6 A Two-Age Group Model and Delayed Recruitment .....	70
2.7 Systems of Two Difference Equations .....	76
2.8 Oscillation in Flour Beetle Populations: A Case Study .....	80
2.9 Project: A Discrete <i>SIS</i> Epidemic Model .....	86
2.10 Project: A Discrete-Time Two-Sex Pair-Formation Model .....	88

**3 Continuous Single-Species Population**

<b>Models with Delays</b> .....	91
3.1 Introduction .....	91
3.2 Models with Delay in Per Capita Growth Rates .....	93
3.3 Delayed-Recruitment Models .....	98
3.4 Models with Distributed Delay .....	104
3.5 Harvesting in Delayed Recruitment Models .....	108
3.5.1 Constant-Effort Harvesting .....	108
3.5.2 Constant-Yield Harvesting .....	109
3.6 Nicholson's Blowflies: A Case Study .....	112
3.7 Project: A Model for Blood Cell Populations .....	116
3.8 Project: Some Epidemic Models .....	119
3.9 Project: A Neuron Interaction Model .....	119

**Part II Models for Interacting Species**

<b>4 Introduction and Mathematical Preliminaries</b> .....	123
4.1 The Lotka–Volterra Equations .....	123
4.2 The Chemostat .....	126
4.3 Equilibria and Linearization .....	128
4.4 Qualitative Behavior of Solutions of Linear Systems .....	135
4.5 Periodic Solutions and Limit Cycles .....	148
4.6 Appendix: Canonical Forms of $2 \times 2$ Matrices .....	156
4.7 Project: A Model for Giving Up Smoking .....	158
4.8 Project: A Model for Retraining of Workers by their Peers .....	159
4.9 Project: A Continuous Two-Sex Population Model .....	160
<b>5 Continuous Models for Two Interacting Populations</b> .....	165
5.1 Species in Competition .....	165
5.2 Predator–Prey Systems .....	173
5.3 Laboratory Populations: Two Case Studies .....	185
5.4 Kolmogorov Models .....	190
5.5 Mutualism .....	191
5.6 The Spruce Budworm: A Case Study .....	199
5.7 The Community Matrix .....	206
5.8 The Nature of Interactions Between Species .....	209
5.9 Invading Species and Coexistence .....	212
5.10 Example: A Predator and Two Competing Prey .....	214
5.11 Example: Two Predators Competing for Prey .....	217
5.12 Project: A Simple Neuron Model .....	218
5.13 Project: A Plant–Herbivore Model .....	221

<b>6</b>	<b>Harvesting in Two-species Models</b>	223
6.1	Harvesting of Species in Competition	223
6.2	Harvesting of Predator–Prey Systems	229
6.3	Intermittent Harvesting of Predator–Prey Systems	237
6.4	Some Economic Aspects of Harvesting	242
6.5	Optimization of Harvesting Returns	247
6.6	Justification of the Optimization Result	251
6.7	A Nonlinear Optimization Problem	254
6.8	Economic Interpretation of the Maximum Principle	260
6.9	Project: A Harvesting Model	263
6.10	Project: Harvesting of Two Species	264

### Part III Structured Population Models

<b>7</b>	<b>Models for Populations with Age Structure</b>	267
7.1	Linear Discrete Models	267
7.2	Linear Continuous Models	273
7.3	The Method of Characteristics	275
7.4	Nonlinear Continuous Models	281
7.5	Models with Discrete Age Groups	288
7.6	Project: Ordinary Differential Equations with Age Structure	290
7.7	Project: Nonlinear Age Structured Population Growth	290
7.8	Project: A Size Structured Population Model	291
<b>8</b>	<b>Models for Populations with Spatial Structure</b>	293
8.1	Introduction	293
8.2	Some Simple Examples of Metapopulation Models	294
8.3	A General Metapopulation Model	297
8.4	A Metapopulation Model with Residence and Travel	299
8.5	The Diffusion Equation	301
8.6	Solution by Separation of Variables	304
8.7	Solutions in Unbounded Regions	314
8.8	Linear Reaction–Diffusion Equations	321
8.9	Nonlinear Reaction–Diffusion Equations	323
8.9.1	Two-Species Interactions	326
8.10	Diffusion in Two Dimensions	330
8.11	Project: Cats and Birds in Space	332
8.12	Project: The Cable Equation	333
8.13	Project: Some Equations of Diffusion Type	335

## Part IV Disease Transmission Models

<b>9</b>	<b>Epidemic Models</b>	345
9.1	Introduction to Epidemic Models	345
9.2	The Simple Kermack–McKendrick Epidemic Model	350
9.3	A Branching-Process Disease-Outbreak Model	361
9.3.1	Transmissibility	367
9.4	Network and Compartmental Epidemic Models	369
9.5	More Complicated Epidemic Models	373
9.5.1	Exposed Periods	373
9.5.2	Treatment Models	375
9.5.3	An Influenza Model	376
9.5.4	A Quarantine-Isolation Model	377
9.6	An SIR Model with a General Infectious Period Distribution	382
9.7	The Age of Infection Epidemic Model	384
9.8	Models with Disease Deaths	388
9.9	A Vaccination Model	391
9.10	The Next Generation Matrix	393
9.10.1	A Global Asymptotic Stability Result	403
9.11	Directions for Generalization	404
9.12	Some Warnings	404
9.13	Project: Discrete Epidemic Models	405
9.14	Project: Fitting Data for an Influenza Model	407
9.15	Project: Social Interactions	407
<b>10</b>	<b>Models for Endemic Diseases</b>	411
10.1	A Model for Diseases with No Immunity	411
10.2	The SIR Model with Births and Deaths	414
10.3	Some Applications	420
10.3.1	Herd Immunity	420
10.3.2	Age at Infection	421
10.3.3	The Interepidemic Period	422
10.3.4	“Epidemic” Approach to Endemic Equilibrium	424
10.3.5	The SIS Model with Births and Deaths	425
10.4	Temporary Immunity	427
10.5	Diseases as Population Control	431
10.6	Parameter Estimation: Ordinary Least Squares	434
10.6.1	Connecting Models to Data	434
10.6.2	Ordinary Least Squares (OLS) Estimation	436
10.7	Possible Extensions	441
10.8	Project: Pulse Vaccination	443
10.9	Project: A Model with Competing Disease Strains	445

10.10 Project: An Epidemic Model in Two Patches ..... 447

10.11 Project: Population Growth and Epidemics ..... 448

10.12 Project: Estimating Parameters for Leishmaniasis ..... 453

10.13 Project: Invasive Pneumococcal Disease Surveillance Data ..... 457

**Epilogue** ..... 465

**References** ..... 483

**Index** ..... 501

Mathematical Models in Population Biology and  
Epidemiology

Brauer, F.; Castillo-Chavez, C.

2012, XXIV, 508 p., Hardcover
