

Contents

Preface	v
1 Introduction	1
1.1 Open Sesame	1
1.2 Design Techniques for Approximation Algorithms	8
1.3 Heuristics Versus Approximation	13
1.4 Notions in Computational Complexity	14
1.5 NP -Complete Problems	17
1.6 Performance Ratios	23
Exercises	28
Historical Notes	33
2 Greedy Strategy	35
2.1 Independent Systems	35
2.2 Matroids	40
2.3 Quadrilateral Condition on Cost Functions	43
2.4 Submodular Potential Functions	49
2.5 Applications	59
2.6 Nonsubmodular Potential Functions	66
Exercises	75
Historical Notes	80
3 Restriction	81
3.1 Steiner Trees and Spanning Trees	82
3.2 k -Restricted Steiner Trees	86
3.3 Greedy k -Restricted Steiner Trees	89

3.4	The Power of Minimum Spanning Trees	102
3.5	Phylogenetic Tree Alignment	110
	Exercises	115
	Historical Notes	121
4	Partition	123
4.1	Partition and Shifting	123
4.2	Boundary Area	129
4.3	Multilayer Partition	136
4.4	Double Partition	142
4.4.1	A Weighted Covering Problem	142
4.4.2	A 2-Approximation for WDS-UDG on a Small Cell	146
4.4.3	A 6-Approximation for WDS-UDG on a Large Cell	151
4.4.4	A $(6 + \varepsilon)$ -Approximation for WDS-UDG	155
4.5	Tree Partition	157
	Exercises	160
	Historical Notes	164
5	Guillotine Cut	165
5.1	Rectangular Partition	165
5.2	1-Guillotine Cut	170
5.3	m -Guillotine Cut	175
5.4	Portals	184
5.5	Quadtree Partition and Patching	191
5.6	Two-Stage Portals	201
	Exercises	205
	Historical Notes	208
6	Relaxation	211
6.1	Directed Hamiltonian Cycles and Superstrings	211
6.2	Two-Stage Greedy Approximations	219
6.3	Connected Dominating Sets in Unit Disk Graphs	223
6.4	Strongly Connected Dominating Sets in Digraphs	228
6.5	Multicast Routing in Optical Networks	235
6.6	A Remark on Relaxation Versus Restriction	238
	Exercises	240
	Historical Notes	243
7	Linear Programming	245
7.1	Basic Properties of Linear Programming	245
7.2	Simplex Method	252
7.3	Combinatorial Rounding	259
7.4	Pipage Rounding	267
7.5	Iterated Rounding	272
7.6	Random Rounding	280

<i>Contents</i>	xi
Exercises	289
Historical Notes	295
8 Primal-Dual Schema and Local Ratio	297
8.1 Duality Theory and Primal-Dual Schema	297
8.2 General Cover	303
8.3 Network Design	310
8.4 Local Ratio	315
8.5 More on Equivalence	325
Exercises	332
Historical Notes	336
9 Semidefinite Programming	339
9.1 Spectrahedra	339
9.2 Semidefinite Programming	341
9.3 Hyperplane Rounding	345
9.4 Rotation of Vectors	352
9.5 Multivariate Normal Rounding	358
Exercises	363
Historical Notes	369
10 Inapproximability	371
10.1 Many-One Reductions with Gap	371
10.2 Gap Amplification and Preservation	376
10.3 APX-Completeness	380
10.4 PCP Theorem	388
10.5 $(\rho \ln n)$ -Inapproximability	391
10.6 n^c -Inapproximability	396
Exercises	399
Historical Notes	405
Bibliography	407
Index	425

Design and Analysis of Approximation Algorithms

Du, D.-Z.; Ko, K.-I.; Hu, X.

2012, XII, 440 p., Hardcover

ISBN: 978-1-4614-1700-2
