1	Introduction	1
1.1	Introduction	1
1.2	Optimization Techniques	2
1.2.1	Conventional Techniques (Classic Methods).....	3
1.2.2	Evolutionary Techniques	7
1.3	Outline of the Book	20
	References.....	21
2	Mathematical Optimization Techniques	23
2.1	Introduction	23
2.2	Quadratic Forms	24
2.3	Some Static Optimization Techniques.....	26
2.3.1	Unconstrained Optimization	27
2.3.2	Constrained Optimization.....	30
2.4	Pontryagin's Maximum Principle.....	37
2.5	Functional Analytic Optimization Technique	42
2.5.1	Norms	42
2.5.2	Inner Product (Dot Product)	43
2.5.3	Transformations.....	45
2.5.4	The Minimum Norm Theorem.....	46
2.6	Simulated Annealing Algorithm (SAA)	48
2.6.1	Physical Concepts of Simulated Annealing	49
2.6.2	Combinatorial Optimization Problems	50
2.6.3	A General Simulated Annealing Algorithm	50
2.6.4	Cooling Schedules	51
2.6.5	Polynomial-Time Cooling Schedule.....	51
2.6.6	Kirk's Cooling Schedule.....	53
2.7	Tabu Search Algorithm	54
2.7.1	Tabu List Restrictions.....	54
2.7.2	Aspiration Criteria	55

2.7.3	Stopping Criteria.....	55
2.7.4	General Tabu Search Algorithm.....	56
2.8	The Genetic Algorithm (GA).....	57
2.8.1	Solution Coding.....	58
2.8.2	Fitness Function.....	58
2.8.3	Genetic Algorithms Operators.....	59
2.8.4	Constraint Handling (Repair Mechanism).....	59
2.8.5	A General Genetic Algorithm.....	60
2.9	Fuzzy Systems.....	60
2.9.1	Basic Terminology and Definition.....	64
2.9.2	Support of Fuzzy Set.....	65
2.9.3	Normality.....	66
2.9.4	Convexity and Concavity.....	66
2.9.5	Basic Operations.....	66
2.10	Particle Swarm Optimization (PSO) Algorithm.....	71
2.11	Basic Fundamentals of PSO Algorithm.....	74
2.11.1	General PSO Algorithm.....	76
	References.....	78
3	Economic Operation of Electric Power Systems.....	83
3.1	Introduction.....	83
3.2	A Hydrothermal–Nuclear Power System.....	84
3.2.1	Problem Formulation.....	84
3.2.2	The Optimization Procedure.....	87
3.2.3	The Optimal Solution Using Minimum Norm Technique.....	91
3.2.4	A Feasible Multilevel Approach.....	94
3.2.5	Conclusions and Comments.....	96
3.3	All-Thermal Power Systems.....	96
3.3.1	Conventional All-Thermal Power Systems; Problem Formulation.....	96
3.3.2	Fuzzy All-Thermal Power Systems; Problem Formulation.....	97
3.3.3	Solution Algorithm.....	105
3.3.4	Examples.....	105
3.3.5	Conclusion.....	111
3.4	All-Thermal Power Systems with Fuzzy Load and Cost Function Parameters.....	112
3.4.1	Problem Formulation.....	113
3.4.2	Fuzzy Interval Arithmetic Representation on Triangular Fuzzy Numbers.....	123
3.4.3	Fuzzy Arithmetic on Triangular L–R Representation of Fuzzy Numbers.....	128
3.4.4	Example.....	129

3.5	Fuzzy Economical Dispatch Including Losses	145
3.5.1	Problem Formulation	146
3.5.2	Solution Algorithm	164
3.5.3	Simulated Example	165
3.5.4	Conclusion	167
	References.....	183
4	Economic Dispatch (ED) and Unit Commitment Problems	
	(UCP): Formulation and Solution Algorithms	185
4.1	Introduction	185
4.2	Problem Statement.....	186
4.3	Rules for Generating Trial Solutions	186
4.4	The Economic Dispatch Problem.....	186
4.5	The Objective Function.....	187
4.5.1	The Production Cost	187
4.5.2	The Start-Up Cost.....	187
4.6	The Constraints	188
4.6.1	System Constraints.....	188
4.6.2	Unit Constraints.....	189
4.7	Rules for Generating Trial Solutions	191
4.8	Generating an Initial Solution	193
4.9	An Algorithm for the Economic Dispatch Problem.....	193
4.9.1	The Economic Dispatch Problem in a Linear Complementary Form.....	194
4.9.2	Tableau Size for the Economic Dispatch Problem	196
4.10	The Simulated Annealing Algorithm (SAA) for Solving UCP	196
4.10.1	Comparison with Other SAA in the Literature	197
4.10.2	Numerical Examples	198
4.11	Summary and Conclusions	207
4.12	Tabu Search (TS) Algorithm	208
4.12.1	Tabu List (TL) Restrictions	209
4.12.2	Aspiration Level Criteria	212
4.12.3	Stopping Criteria.....	213
4.12.4	General Tabu Search Algorithm	213
4.12.5	Tabu Search Algorithm for Unit Commitment	215
4.12.6	Tabu List Types for UCP.....	216
4.12.7	Tabu List Approach for UCP.....	216
4.12.8	Comparison Among the Different Tabu Lists Approaches	217
4.12.9	Tabu List Size for UCP.....	218
4.12.10	Numerical Results of the STSA.....	218

4.13	Advanced Tabu Search (ATS) Techniques	220
4.13.1	Intermediate-Term Memory	221
4.13.2	Long-Term Memory	222
4.13.3	Strategic Oscillation	222
4.13.4	ATSA for UCP	223
4.13.5	Intermediate-Term Memory Implementation	223
4.13.6	Long-Term Memory Implementation	225
4.13.7	Strategic Oscillation Implementation	226
4.13.8	Numerical Results of the ATSA.....	226
4.14	Conclusions	230
4.15	Genetic Algorithms for Unit Commitment.....	231
4.15.1	Solution Coding	232
4.15.2	Fitness Function	232
4.15.3	Genetic Algorithms Operators.....	233
4.15.4	Constraint Handling (Repair Mechanism)	233
4.15.5	A General Genetic Algorithm	234
4.15.6	Implementation of a Genetic Algorithm to the UCP	234
4.15.7	Solution Coding	235
4.15.8	Fitness Function	236
4.15.9	Selection of Chromosomes	237
4.15.10	Crossover	237
4.15.11	Mutation	237
4.15.12	Adaptive GA Operators	239
4.15.13	Numerical Examples	239
4.15.14	Summary	244
4.16	Hybrid Algorithms for Unit Commitment	246
4.17	Hybrid of Simulated Annealing and Tabu Search (ST).....	246
4.17.1	Tabu Search Part in the ST Algorithm	247
4.17.2	Simulated Annealing Part in the ST Algorithm.....	248
4.18	Numerical Results of the ST Algorithm.....	248
4.19	Hybrid of Genetic Algorithms and Tabu Search.....	251
4.19.1	The Proposed Genetic Tabu (GT) Algorithm	251
4.19.2	Genetic Algorithm as a Part of the GT Algorithm.....	251
4.19.3	Tabu Search as a Part of the GT Algorithm	253
4.20	Numerical Results of the GT Algorithm	255
4.21	Hybrid of Genetic Algorithms, Simulated Annealing, and Tabu Search	259
4.21.1	Genetic Algorithm as a Part of the GST Algorithm	261
4.21.2	Tabu Search Part of the GST Algorithm	261
4.21.3	Simulated Annealing as a Part of the GST Algorithm	263
4.22	Numerical Results of the GST Algorithm.....	263
4.23	Summary	268

4.24	Comparisons of the Algorithms for the Unit Commitment Problem	269
4.24.1	Results of Example 1	269
4.24.2	Results of Example 2	271
4.24.3	Results of Example 3	272
4.24.4	Summary	274
	References.....	274
5	Optimal Power Flow.....	281
5.1	Introduction	281
5.2	Power Flow Equations	287
5.2.1	Load Buses.....	288
5.2.2	Voltage Controlled Buses	288
5.2.3	Slack Bus	288
5.3	General OPF Problem Formulations.....	291
5.3.1	The Objective Functions.....	292
5.3.2	The Constraints	295
5.3.3	Optimization Algorithms for OPF.....	297
5.4	Optimal Power Flow Algorithms for Single Objective Cases	299
5.4.1	Particle Swarm Optimization (PSO) Algorithm for the OPF Problem.....	300
5.4.2	The IEEE-30 Bus Power System.....	301
5.4.3	Active Power Loss Minimization	301
5.4.4	Minimization of Generation Fuel Cost.....	307
5.4.5	Reactive Power Reserve Maximization	309
5.4.6	Reactive Power Loss Minimization	310
5.4.7	Emission Index Minimization	312
5.4.8	Security Margin Maximization	317
5.5	Comparisons of Different Single Objective Functions.....	319
5.6	Multiobjective OPF Algorithm	327
5.7	Basic Concept of Multiobjective Analysis	327
5.8	The Proposed Multiobjective OPF Algorithm.....	329
5.8.1	Multiobjective OPF Formulation.....	329
5.8.2	General Steps for Solving Multi-Objective OPF Problem	330
5.9	Generating Nondominated Set.....	330
5.9.1	Generating techniques	330
5.9.2	Weighting method	332
5.10	Hierarchical Cluster Technique	333
5.11	Conclusions	338
	Appendix	339
	References.....	342
