Contents

1 Introduction 1
1.1 Wireless Ad Hoc Sensor Networks 2
1.2 Contributions 4
1.3 Organization 5
References 6

2 Stastical Techniques and Location Discovery 9
2.1 Statistical Techniques. 9
2.2 Location Discovery 10
2.2.1 Definition. 11
2.2.2 Classification 11
2.2.3 Ranging Technology 12
2.2.4 Ranged-Based Location Discovery 14
2.2.5 Range-Free Location Discovery 17
2.2.6 Performance, Topology Control, Coverage and Connectivity. 21
2.3 Location Discovery Computational Complexity. 22
2.4 Measurements, Error Sources and Modeling 24
2.4.1 Error Sources 25
2.4.2 Theoretical Error Models 26
2.4.3 Real Data Error Models. 28
2.5 Distance Measurements and Experimental Platform 34
2.5.1 ILP-Based Instance Generation/Selection 36
References 37

3 Location Discovery in Presence of Insufficient Number of Measurements 41
3.1 Motivation and Overview 42
3.2 Kernel Density Estimation-Based Offline Error Modeling 46
3.2.1 Model Construction. 46

3.2.2 The Objective Function (OF) 51
3.3 Equation-Based Online Error Modeling With Simultaneous Localization 54
3.3.1 Parameter Fitting 54
3.3.2 Monolithic Approximation 55
3.3.3 Iterative Approximation 55
3.3.4 Iterative Shape and Space Approximation 56
3.3.5 Model Evaluation and Analysis 56
3.4 Localized Location Discovery 57
3.5 Experimental Results 58
References 64

4 Lack of the Golden Standard and Missing Measurements 65
4.1 Motivation and Global Flow 65
4.2 Pairwise Consistency-Based Offline Error Modeling 68
4.2.1 Regression 70
4.2.2 Density Estimation 75
4.3 Pairwise Consistency-Based Online Location Discovery 80
4.4 Localized Location Discovery 83
4.5 Experimental Results 85
4.6 Global Ranking and Pairwise Consistency 90
References 95

5 Beacon Positioning and Operations 97
5.1 Motivation and Global Flow 97
5.1.1 Motivational Example and Organization 98
5.2 Nonlinear and Linear Programming 100
5.2.1 Nonlinear Programming-Based Formulation 100
5.2.2 Linear Programming-Based Formulation 100
5.3 Modeling 101
5.3.1 Measurement Error Models 101
5.3.2 Terrain Models 102
5.3.3 Localization Error Models 104
5.4 NLP-Based Beacon Positioning 113
5.4.1 Proof of NP-Completeness 113
5.4.2 Selection of Representative Set of Nodes 114
5.4.3 NLP-Based Beacon Placement Formulation 115
5.4.4 Lower Bound: Uniform Field 116
5.5 Beacon Assignment and Scheduling 117
5.5.1 Beacon Assignment 119
5.5.2 Beacon Scheduling 119
5.6 Experimental Results 122
5.6.1 Location Discovery Accuracy 122
5.6.2 Beacon Assignment and Broadcast 126
References 128

6 Techniques for Enabling Efficient Location Discovery 129
6.1 Motivation and Global Flow 130
6.1.1 Organization and Overview 131
6.2 Modeling 134
6.2.1 Distance Measurement Error Models 134
6.2.2 Location Error Models 135
6.2.3 Distance Calculation Error Model 137
6.2.4 Instrumented Environment Models 138
6.2.5 Mobility Models 138
6.3 Enabling Location Discovery 139
6.3.1 Atomic Multilateration 139
6.3.2 NLP Location Discovery 141
6.3.3 LD Partitioning and Iterative Fine-Tuning 142
6.4 Node Addition 142
6.4.1 Adding a Single Node 143
6.4.2 Adding Multiple Nodes Simultaneously 147
6.5 LD Infrastructure Engineeing Change 152
6.6 Techniques for LD Physical Security 154
6.6.1 Trust Management and Data Authentication Using Constraint Manipulation 154
6.6.2 Privacy 157
6.6.3 LDI Security: Assignment and Scheduling 159
References 160

7 Localization Attacks and Countermeasures 161
7.1 Preliminaries 164
7.1.1 Localization Algorithm 164
7.1.2 Error Models 164
7.1.3 Attacker's Objectives 165
7.2 Defense Algorithms for Atomic Multilateration 166
7.2.1 Defense Algorithm Organization 167
7.2.2 Defense Algorithm Objectives 168
7.2.3 Defense Algorithms Based on Linear Models 169
7.2.4 Perfect Attack Algorithm Results 171
7.2.5 Inefficiency of Outlier Detection Based on Linear Regression 175
7.2.6 Combined Minimum–Maximum Algorithm 176
7.3 Attack Algorithms for Atomic Multilateration 182
7.3.1 Structure of Attack Algorithm 183
7.3.2 Lowest Resistance Path Algorithm 185
7.3.3 Experimental Results 186
References 187

8 Future Research Directions 189

Localization in Wireless Networks
Foundations and Applications
Sanford, J.F.; Potkonjak, M.; Slijepcevic, S.
2012, XVI, 200 p., Hardcover
ISBN: 978-1-4614-1838-2
