

Contents

Preface	vii
Notation	xi
1 Introduction	1
1.1 Nonsmooth optimization framework	1
1.2 Topological approach	3
1.3 Genericity and stability issues	8
1.4 Nonlinear programming: smooth case	9
2 Mathematical Programming Problems with Complementarity Constraints	15
2.1 Applications and examples	15
2.2 Stability and structure of the feasible set	18
2.2.1 Constraint qualifications MFC and SMFC	19
2.2.2 SMFC implies stability and Lipschitz manifold	30
2.3 Critical point theory	40
2.4 Parametric aspects	52
3 General Semi-infinite Programming Problems	63
3.1 Applications and examples	63
3.2 Structure of the feasible set	67
3.2.1 Closure of the feasible set and Sym-MFCQ	67
3.2.2 Feasible set as a Lipschitz manifold	84
3.3 Nonsmooth symmetric reduction ansatz	97
3.4 Critical point theory	115
4 Mathematical Programming Problems with Vanishing Constraints ..	125
4.1 Applications and examples	125
4.2 Critical point theory	127

5	Bilevel Optimization	141
5.1	Applications and examples	141
5.2	Five types in parametric optimization	146
5.3	Structure of the feasible set: $\dim(x) = 1$	156
5.4	Toward the case $\dim(x) \geq 2$	160
6	Impacts on Nonsmooth Analysis	167
6.1	Criticality for nonsmooth functions	167
6.2	Versions of Sard's Theorem	168
6.3	Regularity and implicit functions	172
A	Topology	175
A.1	Cell attachment and deformation	175
A.2	Whitney topology	176
B	Analysis	179
B.1	Manifolds and implicit functions	179
B.2	Transversality	181
	References	185
	Index	191

Topological Aspects of Nonsmooth Optimization

Shikhman, V.

2012, XII, 196 p., Hardcover

ISBN: 978-1-4614-1896-2
