

Contents

1	Introduction	1
1.1	A Unifying Framework	3
1.2	Modeling to Reveal Problem Structure	6
1.3	The Role of Duality	8
1.4	Advantages of Integrated Methods	10
1.5	Some Applications	12
1.6	Software	13
1.7	Plan of the Book	15
1.8	Bibliographic Notes	16
2	Examples	19
2.1	Basic Definitions	20
2.2	The Solution Process	21
2.3	Freight Transfer	22
2.3.1	Formulating the Problem	23
2.3.2	Inference: Bounds Propagation	23
2.3.3	Inference: Valid Inequalities	24
2.3.4	Relaxation: Linear Programming	25
2.3.5	Branching Search	26
	Exercises	29
2.4	Production Planning	29
2.4.1	Formulating the Problem	30
2.4.2	Relaxation	30
2.4.3	Branching Search	32
2.4.4	Inference	32
	Exercises	34
2.5	Employee Scheduling	34

2.5.1	Formulating the Problem	35
2.5.2	Inference: Domain Filtering	38
2.5.3	Inference for Variable Indices	39
	Exercises	41
2.6	Continuous Global Optimization	42
2.6.1	Inference: Bounds Propagation	44
2.6.2	Relaxation: Factored Functions	44
2.6.3	Branching Search	45
	Exercises	47
2.7	Product Configuration	47
2.7.1	Formulating the Problem	48
2.7.2	Inference: Indexed Linear Constraint	50
2.7.3	Relaxation: Indexed Linear Constraint	51
2.7.4	Branching Search	53
	Exercises	53
2.8	Planning and Scheduling	53
2.8.1	Formulating the Problem	54
2.8.2	Relaxation: The Master Problem	56
2.8.3	Inference: Benders Cuts	58
	Exercises	60
2.9	Routing and Frequency Assignment	61
2.10	Bibliographic Notes	64
3	Optimization Basics	65
3.1	Linear Programming	65
3.1.1	Optimality Conditions	66
3.1.2	Simplex Method	69
3.1.3	Sensitivity Analysis	73
3.1.4	Feasibility Conditions	74
	Exercises	75
3.2	Network Flows	77
3.2.1	Basis Tree Theorem	79
3.2.2	Optimality Conditions	81
3.2.3	Network Simplex Method	83
3.2.4	Maximum Flow	85
3.2.5	Bipartite Matching	90
3.2.6	Exercises	92
3.3	Nonlinear Programming	93
3.3.1	Local Optimality Conditions	94
3.3.2	Global Optimality Conditions	97

Exercises	100
3.4 Dynamic Programming	100
3.4.1 State Variables	101
3.4.2 Recursive Solution	104
3.4.3 Complexity	106
Exercises	106
3.5 Bibliographic Notes	107
4 Duality	109
4.1 Inference Duality	110
4.1.1 Weak and Strong Duality	111
4.1.2 Certificates and Problem Complexity	112
4.1.3 Sensitivity Analysis	113
4.1.4 Constraint-Directed Search	114
Exercises	115
4.2 Relaxation Duality	116
Exercises	118
4.3 Linear Programming Duality	118
4.3.1 Inference Dual	118
4.3.2 Dual Simplex Method	121
4.3.3 Sensitivity Analysis	123
4.3.4 Relaxation Dual	125
Exercises	126
4.4 Surrogate Duality	127
4.4.1 Inference Dual	128
4.4.2 Sensitivity Analysis	129
4.4.3 Relaxation Dual	130
Exercises	130
4.5 Lagrangean Duality	130
4.5.1 Inference Dual	131
4.5.2 Sensitivity Analysis	133
4.5.3 Relaxation Dual	134
4.5.4 Lagrangean Relaxation for LP	136
4.5.5 Example: Generalized Assignment Problem	138
4.5.6 Solving the Lagrangean Dual	139
Exercises	140
4.6 Subadditive Duality	141
4.6.1 Inference Dual	142
4.6.2 Subadditive Dual	144
4.6.3 Sensitivity Analysis	146

4.6.4	Relaxation Dual	147
	Exercises	148
4.7	Branching Duality	148
4.7.1	Inference Dual	149
4.7.2	A Value-Bounding Function	151
4.7.3	General Sensitivity Analysis	154
4.7.4	Relaxation Dual	157
	Exercises	158
4.8	Bibliographic Notes	159
5	Search	161
5.1	Branching Search	162
5.1.1	Branch-Infer-and-Relax Methods	163
5.1.2	Node Selection	165
5.1.3	Variable and Branch Point Selection	168
5.1.4	Cost-Based Branching	170
5.1.5	Primal Heuristics	172
5.1.6	Branch and Price	174
5.1.7	Example: Airline Crew Scheduling	175
	Exercises	182
5.2	Constraint-Directed Search	183
5.2.1	The Search Algorithm	184
5.2.2	Logic-Based Benders Decomposition	187
5.2.3	Constraint-Directed Branching	189
5.2.4	Example: Propositional Satisfiability	193
5.2.5	Implication Graph	197
5.2.6	Partial-Order Dynamic Backtracking	200
5.2.7	Example: Propositional Satisfiability	202
	Exercises	203
5.3	Local Search	205
5.3.1	Some Popular Metaheuristics	206
5.3.2	Local Search Conceived as Branching	208
5.3.3	Relaxation	211
5.3.4	Example: Single-Vehicle Routing	212
5.3.5	Constraint-Directed Local Search	216
5.3.6	Example: Single-Vehicle Routing	217
	Exercises	218
5.4	Bibliographic Notes	220

6	Inference	223
6.1	Completeness and Consistency	224
6.1.1	Basic Definitions	224
6.1.2	Domain Consistency	225
6.1.3	Bounds Consistency	227
6.1.4	k -Completeness	228
6.1.5	k -Consistency	230
6.1.6	Backtracking and Width	230
	Exercises	232
6.2	Linear Inequalities	233
6.2.1	Domain and Bounds Consistency	233
6.2.2	k -Completeness	234
6.2.3	Domain Reduction with Dual Multipliers	236
6.2.4	Classical Benders Cuts	238
	Exercises	240
6.3	General Inequality Constraints	241
6.4	Propositional Logic	243
6.4.1	Logical Clauses	244
6.4.2	A Complete Inference Method	245
6.4.3	Unit Resolution and Horn Clauses	247
6.4.4	Domain Consistency and k -Completeness	247
6.4.5	Strong k -Consistency	249
6.4.6	Parallel Resolution	250
	Exercises	252
6.5	0-1 Linear Inequalities	254
6.5.1	Implication between Inequalities	254
6.5.2	Implication of Logical Clauses	257
6.5.3	Implication of Cardinality Clauses	259
6.5.4	0-1 Resolution	261
6.5.5	Domain Consistency and k -Completeness	263
6.5.6	Strong k -Consistency	265
	Exercises	266
6.6	Integer Linear Inequalities	267
6.6.1	Benders Cuts from the Subadditive Dual	267
6.6.2	Benders Cuts from the Branching Dual	268
6.6.3	Constraint-Directed Branching	272
	Exercises	275
6.7	The Element Constraint	276
6.7.1	Domain Consistency	277
6.7.2	Bounds Consistency	279

Exercises	281
6.8 The All-Different Constraint	281
6.8.1 Bipartite Matching Formulation	282
6.8.2 Domain Consistency	283
6.8.3 Bounds Consistency	286
Exercises	289
6.9 The Cardinality and Nvalues Constraints	289
6.9.1 The Cardinality Constraint	289
6.9.2 Network Flow Model for Cardinality	290
6.9.3 Domain Consistency	291
6.9.4 The Nvalues Constraint	292
Exercises	293
6.10 The Among and Sequence Constraints	294
6.10.1 The Among Constraint	294
6.10.2 The Sequence Constraint	295
6.10.3 Filtering Based on Cumulative Sums	296
6.10.4 Flow-Based Filtering	300
Exercises	303
6.11 The Stretch Constraint	304
6.11.1 Dynamic Programming Model	305
6.11.2 Domain Consistency	306
Exercises	311
6.12 The Regular Constraint	311
6.12.1 Deterministic Finite Automata	312
6.12.2 Domain Filtering	314
6.12.3 Filtering by Decomposition	315
6.12.4 Nondeterministic Finite Automata	318
6.12.5 Cyclic Regular Constraint	319
6.12.6 A Dynamic Programming Constraint	320
Exercises	321
6.13 The Circuit Constraint	321
6.13.1 Modeling with Circuit	322
6.13.2 Elementary Filtering Methods	324
6.13.3 Filtering Based on Separators	325
6.13.4 Network Flow Model	328
Exercises	329
6.14 Disjunctive Scheduling	330
6.14.1 Edge Finding	331
6.14.2 Not-First/Not-Last Rules	335
6.14.3 Benders Cuts	340

Exercises	347
6.15 Cumulative Scheduling	349
6.15.1 Edge Finding	350
6.15.2 Extended Edge Finding	356
6.15.3 Not-First/Not-Last Rules	358
6.15.4 Energetic Reasoning	359
6.15.5 Benders Cuts	361
Exercises	364
6.16 Bibliographic Notes	365
7 Relaxation	371
7.1 Piecewise Linear Functions	373
Exercises	375
7.2 0-1 Linear Inequalities	376
7.2.1 Chvátal–Gomory Cuts	378
7.2.2 0-1 Knapsack Cuts	381
7.2.3 Sequential Lifting	382
7.2.4 Sequence-Independent Lifting	385
7.2.5 Set-Packing Inequalities	387
Exercises	389
7.3 Integer Linear Inequalities	391
7.3.1 Chvátal–Gomory Cuts	392
7.3.2 Gomory Cuts	394
7.3.3 Mixed-Integer Rounding Cuts	399
7.3.4 Separating Mixed-Integer Rounding Cuts	401
7.3.5 Integral Polyhedra	403
Exercises	406
7.4 Disjunctions of Linear Systems	408
7.4.1 Convex Hull Relaxation	408
7.4.2 Big- M Relaxation	411
7.4.3 Disjunctions of Linear Inequalities	413
7.4.4 Disjunctions of Linear Equations	416
7.4.5 Separating Disjunctive Cuts	417
Exercises	421
7.5 Disjunctions of Nonlinear Systems	423
7.5.1 Convex Hull Relaxation	424
7.5.2 Big- M Relaxation	428
Exercises	428
7.6 Mixed-Integer Modeling	429
7.6.1 Mixed-Integer Representability	430

7.6.2	Example: Fixed-Charge Function	434
7.6.3	Disjunctive Models	438
7.6.4	Knapsack Models	444
	Exercises	447
7.7	Propositional Logic	450
7.7.1	Common Logical Formulas	450
7.7.2	Resolution as a Tightening Technique	455
7.7.3	Refutation by Linear Relaxation	458
7.7.4	Input Resolution and Rank 1 Cuts	459
7.7.5	Separating Resolvents	464
	Exercises	466
7.8	The Element Constraint	468
7.8.1	Convex Hull Relaxations	469
7.8.2	Big- M Relaxations	473
7.8.3	Vector-Valued Element	474
	Exercises	477
7.9	The All-Different Constraint	478
7.9.1	Convex Hull Relaxation	479
7.9.2	Convex Hull Mixed-Integer Formulation	484
7.9.3	Relaxing the Objective Function	486
7.9.4	Alldiff Systems	487
	Exercises	491
7.10	The Cardinality Constraint	492
7.10.1	Convex Hull Relaxation	492
7.10.2	Convex Hull Mixed-Integer Formulation	494
	Exercises	495
7.11	The Circuit Constraint	496
7.11.1	0-1 Programming Model	497
7.11.2	Continuous Relaxations	497
7.11.3	Comb Inequalities	499
	Exercises	502
7.12	Disjunctive Scheduling	503
7.12.1	Disjunctive Relaxations	504
7.12.2	Mixed-Integer Relaxations	506
7.12.3	A Class of Valid Inequalities	508
	Exercises	511
7.13	Cumulative Scheduling	512
7.13.1	Mixed-Integer Models	512
7.13.2	A Class of Valid Inequalities	517
7.13.3	Relaxation of Benders Subproblems	520

Exercises	530
7.14 Bibliographic Notes	531
8 Dictionary of Constraints	535
0-1 Linear	536
All-different	537
Among	538
Bin Packing	539
Cardinality	540
Cardinality Clause	541
Cardinality conditional	542
