## Part I Data examples and some mathematical background

---

<b>1</b>	<b>Data examples .....</b>	<b>3</b>
<b>2</b>	<b>An informal introduction to hazard-based analyses .....</b>	<b>9</b>
2.1	Why survival analysis is hazard-based. ....	10
2.1.1	Survival multistate model, hazard, and survival probability .....	10
2.1.2	Estimation: The hazard remains ‘undisturbed’ by censoring. ....	13
2.2	Consequences of survival analysis being based on hazards .....	17
2.2.1	Counting processes and martingales .....	17
2.2.2	Left-truncation and right-censoring .....	20
2.2.3	Competing risks .....	23
2.2.4	Time-inhomogeneous Markov multistate models .....	26
2.3	Approximate inference in practice based on large sample results	34
2.4	Exercises .....	36

---

## Part II Competing risks

---

<b>3</b>	<b>Multistate modelling of competing risks .....</b>	<b>41</b>
3.1	The competing risks multistate model .....	42
3.2	Simulating competing risks data .....	45
3.3	The latent failure time model .....	50
3.4	Exercises .....	53

<b>4</b>	<b>Nonparametric estimation</b>	55
4.1	The Nelson-Aalen and Aalen-Johansen estimators	55
4.2	Analysis of simulated competing risks data	62
4.3	Analysis of hospital data	76
4.3.1	Latent failure time approach	80
4.4	Analysis of pregnancy outcome data	82
4.5	A special case: No effect on the competing cause-specific hazard	85
4.6	Exercises	87
<b>5</b>	<b>Proportional hazards models</b>	89
5.1	Introduction	90
5.2	Proportional cause-specific hazards models	93
5.2.1	Estimation	93
5.2.2	Examples	98
5.3	Proportional subdistribution hazards model	122
5.3.1	The subdistribution process	123
5.3.2	Estimation	126
5.3.3	Examples	133
5.3.4	Proportional subdistribution hazards analysis of all cumulative incidence functions	139
5.3.5	Left-truncation	140
5.3.6	Simulating proportional subdistribution hazards data	141
5.4	The least false parameter	144
5.5	Goodness-of-fit methods	146
5.6	Beyond proportional hazards	150
5.7	Exercises	152
<b>6</b>	<b>Nonparametric hypothesis testing</b>	155
6.1	Exercises	158
<b>7</b>	<b>Further topics in competing risks</b>	159
7.1	More than two competing risks	159
7.2	Frequently asked questions	160
7.3	Discrete time methods for competing risks	164

---

## Part III Multistate models

---

<b>8</b>	<b>Multistate models and their connection to competing risks</b>	169
8.1	Time-inhomogeneous Markov processes with finite state space	170
8.2	Nested series of competing risks experiments	172
8.3	Exercises	175

<b>9</b>	<b>Nonparametric estimation</b>	177
9.1	The Nelson-Aalen and Aalen-Johansen estimators	177
9.2	Examples	182
9.2.1	Impact of hospital-acquired pneumonia on length of stay and mortality in intensive care units	182
9.2.2	Impact of ventilation on length of intensive care unit stay	192
9.3	Exercises	193
<b>10</b>	<b>Proportional transition hazards models</b>	197
10.1	Model formulation and practical implementation	197
10.2	Examples	202
10.2.1	Hospital-acquired pneumonia	202
10.2.2	Ventilation in intensive care unit	206
10.3	Exercises	208
<b>11</b>	<b>Time-dependent covariates and multistate models</b>	211
11.1	A simple joint model for time-dependent covariates and time-to-event endpoints	212
11.1.1	Transient states and time-dependent covariates	212
11.1.2	A proportional hazards model with time-dependent covariates	215
11.1.3	Example	216
11.2	Time-dependent covariates and competing risks	217
11.2.1	Cause-specific hazards	218
11.2.2	Subdistribution hazard	219
11.2.3	Example	220
11.3	Further topics in the analysis of time-dependent covariates	222
11.4	Exercises	225
<b>12</b>	<b>Further topics in multistate modelling</b>	227
<b>A</b>	<b>A nonparametric bootstrap for multistate models</b>	231
	<b>References</b>	233
	<b>Index</b>	241
