

TABLE OF CONTENTS

Preface	v
Notation and Terminology	ix
Chapter I. Preliminaries	1
1. Symplectic groups and symmetric domains	1
2. Some algebraic and arithmetic preliminaries	4
3. Modular forms of integral weight	13
Chapter II. Theta Functions and Factors of Automorphy	15
4. Classical theta functions	15
5. Modular forms of half-integral weight	24
6. Holomorphic and nonholomorphic modular forms on $\mathfrak{H}_1$	30
Chapter III. The Rationality and Eisenstein Series	39
7. The rationality of modular forms	39
8. Dirichlet series and Eisenstein series	51
9. Eisenstein series as automorphic eigenforms	66
Chapter IV. The Correspondence between Forms of Integral and Half-integral Weight	89
10. Theta series of indefinite quadratic forms	89
11. Theta integrals	96
12. Main theorems on the correspondence	102
13. Hecke operators	116
Chapter V. The Arithmeticity of Critical Values of Dirichlet Series	129
14. The theory on $SL_2(\mathbf{Q})$ for integral weight	129
15. The eigenspaces of R_p	133
16. Main theorems on arithmeticity	136

17. Hilbert modular forms	148
Appendix	151
A1. Proof of various facts	151
A2. Whittaker functions	157
A3. Eisenstein series of half-integral weight	160
References	171
Index	175
