Chapter 1

NANOELECTROCHEMISTRY: FUNDAMENTALS AND APPLICATIONS IN BIOLOGY AND MEDICINE

Pradyumna S. Singh, Edgar D. Goluch, Hendrik A. Heering, and
Serge G. Lemay

I. Introduction.....	1
II. The Classical Regime	4
1. Theory.....	5
2. Experimental Approaches to Nanoelectrochemistry.....	9
(i) Fabrication of Nanoelectrodes.....	9
(ii) Redox Cycling (Thin Layer Cells, IDEs and SECM).....	14
3. Challenges of Characterization	16
4. Experimental Results.....	20
III. The Mesoscopic Regime.....	22
1. Double-Layer Effects	23
2. Small Volumes	27
3. Quantization Effects	31
IV. Single-Molecule Limit.....	34
1. Immobilized Molecules.....	35
2. Electrochemistry of Freely-Diffusing Molecules.....	42
V. Applications in Biology and Medicine.....	45
1. Sensor Fabrication	47
(i) Nano Interdigitated Electrode Arrays (nIDEA)	47
(ii) Nanopillars and Nanoelectrode Ensembles.....	49
(iii) Other Techniques.....	50
2. Probing Cells	51
3. Lab-On-A-Chip	54

Acknowledgments.....	54
References.....	56

Chapter 2

INTERFACING BIOMOLECULES, CELLS AND TISSUES WITH NANOWIRE-BASED ELECTRICAL DEVICES

Moria Kwiat and Fernando Patolsky

I. Introduction.....	67
II. Nanowire Field-Effect Devices as Sensors.....	69
III. Nanowire Field Effect Devices for the Detection of Molecular Species.....	72
IV. Nanowire FET Arrays for the Electrical Monitoring of Single Neuron and Neural Circuits.....	78
V. Nanowire Based Electrical Devices as Tissue Monitoring Elements.....	83
VI. Nanowires-Based Transistor Flexible Arrays for the Electrical Recording of Cardiomyocytes.....	88
VII. Nanoscale 3D-Flexible FET Bioprobes.....	94
VIII. Conclusions.....	100
References.....	101

Chapter 3

SCANNING ELECTROCHEMICAL MICROSCOPY IMAGING OF DNA ARRAYS FOR HIGH THROUGHPUT ANALYSIS APPLICATIONS

Koji Nakano

I. Introduction.....	105
II. DNA Arrays for Genomic Analysis.....	107
1. Types and Manufacture Methods of DNA Arrays.....	108
2. Gene Expression Profiling.....	112

3. Sequencing by Hybridization	114
4. Microelectronics Array for an Electrochemistry Approach.....	116
III. SECM as a DNA Sensor and DNA Array Readout	118
1. Introduction and Principle of SECM	120
(i) Operation of SECM for Surface Imaging	120
(ii) Approach Curve at Various Substrate Surfaces	122
2. Examples of Negative Feedback Mode Imaging.....	126
3. Examples of Positive Feedback Mode Imaging	131
4. Examples of Enzymic-Reaction-Coupled Imaging	134
IV. Conclusions and Future Outlook.....	139
Acknowledgement	142
References	142

Chapter 4

ELECTROCHEMISTRY OF BIOMIMETIC MEMBRANES

Rolando Guidelli and Lucia Becucci

I. Introduction.....	147
II. The Biomimetic Membranes: Scope and Requirements.....	148
III. Electrochemical Impedance Spectroscopy	151
IV. Formation of Lipid Films in Biomimetic Membranes.....	163
1. Surface Plasmon Resonance.....	163
2. Vesicle Fusion	166
3. Langmuir-Blodgett and Langmuir Schaefer Transfer.....	173
4. Rapid Solvent Exchange.....	175
5. Fluidity in Biomimetic Membranes.....	175
V. The Various Types of Biomimetic Membranes.....	177
1. Mercury Supported Lipid Monolayers	177
2. Alkanethiol-Lipid Hybrid Bilayers.....	187
3. Bilayer Lipid Membranes (BLMs)	192
4. Solid Supported Bilayer Lipid Membranes (sBLMs).....	201
5. Tethered Bilayer Lipid Membranes (tBLMs).....	208

(i) Spacer-Based tBLMs.....	209
(ii) Thiolipid-based tBLMs	211
(iii) (Thiolipid-Spacer)-Based tBLMs.....	233
6. Polymer-Cushioned Bilayer Lipid Membranes (pBLMs)	240
7. S-Layer Stabilized Bilayer Lipid Membranes (ssBLMs)	244
8. Protein-Tethered Bilayer Lipid Membranes (ptBLMs)	249
VI. Conclusions	254
Acknowledgments.....	256
Acronyms	256
References	257

Chapter 5

ELECTROCHEMICAL ANALYSIS OF ION CHANNELS AND TRANSPORTERS IN PORE-SUSPENDING MEMBRANES

Eva K. Schmitt and Claudia Steinem

I. Introduction.....	267
II. Electrochemical Characterisation of Pore-Suspending Membranes.....	270
1. Nano-BLMs	270
(i) Formation and Impedance Analysis of Nano-BLMs.....	270
(ii) Long-Term Stability of Nano-BLMs	274
2. Pore-Suspending Membranes on CPEO3.....	276
(i) Impedance Analysis of Pore-Suspending Membranes on Porous Alumina with Fully Opened Pore Bottoms.....	276
(ii) Impedance Analysis of Pore-Suspending Membranes on Porous Alumina with Partially Opened Pore Bottoms.....	279
III. Reconstitution of Peptides in Nano-BLMs	285
1. Peptidic Carriers and Ion Channels	286
(i) Reconstitution of the Ion Carrier Valinomycin.....	286
(ii) Reconstitution of Channel Forming Peptides.....	289

2. Protein Channels.....	293
(i) Outer Membrane Protein F.....	293
(ii) Connexon 26.....	294
IV. Impedance Analyses on Pore-Spanning Membranes.....	295
1. Reconstitution of OmpF	297
2. Analysis of Gramicidin D Activity.....	300
(i) Channel Activity of Gramicidin D Reconstituted into Pore-Spanning Membranes	300
(ii) Mass Transport Phenomena	305
(iii) Gramidicin Transfer from Peptide-Doped Liposomes to Pore-Spanning Lipid Bilayers	307
V. Activity of the Proton Pump Bacteriorhodopsin.....	309
1. Theoretical Description of Light-Induced bR-Photocurrents	310
(i) Purple Membranes Attached to Nano-BLMs.....	310
(ii) bR Inserted in Pore-Spanning Membranes.....	314
2. Attachment of Purple Membranes to Nano-BLMs	316
(i) Functionality of bR in PM-fragments adsorbed on nano-BLMs.....	316
(ii) Influence of the Ionophore CCCP	320
3. Insertion of bR in Pore-Spanning Membranes	323
VI. Concluding Remarks.....	327
Acknowledgments.....	327
References	327
Index.....	335

Applications of Electrochemistry and Nanotechnology in
Biology and Medicine II

Eliaz, N. (Ed.)

2012, XX, 338 p. 86 illus., 20 illus. in color., Hardcover

ISBN: 978-1-4614-2136-8
