

Contents

- 1 Introduction** 1
 - References 2
- 2 Pluripotent Cells** 5
 - 2.1 Different Pluripotent Cells 5
 - 2.2 Transcriptional Networks and Signaling Pathways of Pluripotency 6
 - 2.2.1 Transcriptional Network of Pluripotency 8
 - References 9
- 3 Induced Pluripotent Stem Cells (iPSCs)** 11
 - 3.1 Generation the First iPSCs 11
 - 3.2 Reprogramming. 12
 - 3.2.1 Factor Delivery into Target Cells 12
 - References 17
- 4 Molecular Mechanisms of Pluripotency.** 21
 - 4.1 Steps in Reprogramming 21
 - 4.1.1 Increase in the Cell Cycle Rate 21
 - 4.1.2 Morphological Changes 22
 - 4.1.3 Late Events Toward Pluripotency 22
 - 4.2 Mechanisms in Reprogramming 23
 - 4.2.1 Genetic Factors. 23
 - 4.2.2 Signaling Pathways 24
 - 4.3 Dynamics of Direct Reprogramming 25
 - 4.4 Epigenetic Modifications 26
 - 4.5 Similarities and Differences Between iPSCs and ESCs 27
 - References 29

5	Modeling Disease in a Dish.	33
5.1	Disease-Specific iPSCs.	34
5.2	Choosing Cell Sources.	34
5.3	Identification of iPSC Colonies.	40
5.4	Characterization of Genetic Mutation.	42
5.5	iPSCs Differentiation into Desired Cell Types	42
	References	44
6	Challenges to Therapeutic Potential of hiPSCs	51
6.1	Is Reprogramming Necessary for Regenerative Therapies?.	53
	References	55
7	New Approach to Understand the Biology of Stem Cells	57
7.1	Health Versus Disease	59
7.2	Changed Paradigm: Reprogramming as Rare But Robust Process	61
7.3	From Reductionism to Wholeness	62
7.4	More Future Considerations	66
	References	68
8	Conclusion.	69
	About the Author	71
