

Contents

1	Introduction	1
1.1	Control Systems	2
1.1.1	MIMO Dynamic Systems	2
1.1.2	System Discretization	7
1.2	Communication Systems	18
1.2.1	Channel Models	18
1.2.2	Channel Discretization	22
1.3	Organization of the Book	25
2	Signals and Systems	31
2.1	Signals and Spectral Densities	31
2.1.1	Scalar Signals	32
2.1.2	Vector Signals	37
2.2	Linear Systems	40
2.2.1	Transfer Functions and Matrices	40
2.2.2	System Models	45
2.2.3	Time-Varying Systems	53
2.3	Noise Processes and BER Analysis	55
3	Linear System Theory	67
3.1	Realizations	68
3.1.1	Observability	70
3.1.2	Reachability	75
3.1.3	Minimal Realization	78
3.1.4	Sampling Effects	81
3.2	Stability	85
3.2.1	Lyapunov Criterion	85
3.2.2	Linear Stabilization	90
3.2.3	All Stabilizing Controllers	94
3.3	Time-Varying Systems	99
3.3.1	Realizations	100
3.3.2	Stability	110

4	Model Reduction	125
4.1	Performance Measures	126
4.2	Balanced Truncation	133
4.2.1	Balanced Realization	133
4.2.2	Inverse Balanced Realization	139
4.3	Optimal Hankel-Norm Approximation	146
4.3.1	Optimal Model Reduction	147
4.3.2	Error Bound in \mathcal{H}_∞ Norm	160
4.3.3	Extension Theorem	164
5	Optimal Estimation and Control	175
5.1	Minimum Variance Estimation	176
5.1.1	Preliminaries	176
5.1.2	Kalman Filters	183
5.1.3	Stability	189
5.1.4	Output Estimators	195
5.2	Minimum Variance Control	200
5.2.1	Linear Quadratic Regulators	201
5.2.2	Stability	207
5.2.3	Full Information Control	214
5.3	LTI Systems and Stationary Processes	217
5.3.1	Spectral Factorizations	218
5.3.2	Normalized Coprime Factorizations	222
6	Design of Feedback Control Systems	235
6.1	Output Feedback Control	236
6.1.1	Optimal Controllers	240
6.1.2	Controller Reduction	248
6.2	Control System Design	257
6.2.1	Loop Shaping via Frequency Weighting	258
6.2.2	LQR Design via Root Locus	263
6.2.3	Loop Transfer Recovery	268
6.3	Design Examples	280
6.3.1	Design of Flight Control System	280
6.3.2	Design of Inverted Pendulum Control System	283
7	Design of Wireless Transceivers	293
7.1	MIMO Wireless Communication Systems	294
7.1.1	Multirate Transmultiplexer	294
7.1.2	Direct Sequence CDMA Systems	300
7.1.3	OFDM Model	303
7.2	Linear Receivers	306
7.2.1	Zero-Forcing Equalizers	306
7.2.2	Zero-Forcing Precoders	311
7.2.3	Linear MMSE Transceivers	317

7.3	Decision Feedback Receivers	321
7.3.1	Vector Symbol Detection	322
7.3.2	Decision Feedback Equalization	325
8	System Identification	343
8.1	Least-Squares-Based Identification	344
8.1.1	LS and RLS Algorithms	344
8.1.2	MMSE Algorithm	351
8.2	Subspace-Based Identification	354
8.2.1	TLS Estimation Algorithm	354
8.2.2	Subspace Method	359
8.2.3	Graph Space Method	363
A	Linear Algebra	377
A.1	Vectors and Matrices	377
A.2	Projections and Generalized Inverses	380
A.3	Decompositions of Matrices	383
A.3.1	Eigenvalues and Eigenvectors	383
A.3.2	QR Factorizations	384
A.3.3	Schur Decompositions	385
A.3.4	Singular Value Decompositions	386
A.4	Hermitian Matrices	388
A.5	Algebraic Riccati Equations	391
B	Random Variables and Processes	401
B.1	Probability	401
B.2	Random Variables and Vectors	403
B.3	Expectations	406
B.3.1	Moments and Central Moments	406
B.3.2	Correlation and Covariance	407
B.3.3	Characteristic Functions	408
B.4	Sequences of Random Variables	409
B.5	Random Processes	411
B.6	Cramér–Rao Lower Bound	413
C	Transfer Function Matrices	419
C.1	Polynomial Matrices	419
C.2	Rational Matrices	424
C.2.1	Matrix Fractional Descriptions	424
C.2.2	Row- and Column-Reduced Matrices	426
C.2.3	Smith–McMillan Form	428
C.3	Spectral Factorizations	430
	References	441
	Index	447

Discrete-Time Linear Systems
Theory and Design with Applications

Gu, G.

2012, XVI, 452 p., Hardcover

ISBN: 978-1-4614-2280-8
