

# Contents

## Part I Motivating Phenomena

|          |  |    |
|----------|--|----|
| <b>1</b> | <b>Illustrative Graphs</b> .....       | 3  |
| 1.1      | The Graph That Started It All .....    | 3  |
| 1.2      | A Sample of Distinctive Graphs .....   | 4  |
| 1.3      | Co-spectral Graphs .....               | 7  |
| <b>2</b> | <b>Intriguing Properties</b> .....     | 9  |
| 2.1      | Preliminaries and Notation .....       | 9  |
| 2.2      | Fractal-like Structure of Graphs ..... | 11 |
| 2.3      | Invariants of Graphs .....             | 16 |

## Part II Probabilistic Approaches

|          |   |    |
|----------|---|----|
| <b>3</b> | <b>Markov Chains</b> .....                                  | 23 |
| 3.1      | Introduction .....  | 23 |
| 3.2      | Markov Chains and Perturbations .....                       | 23 |
| 3.3      | Hitting Times and the Fundamental Matrix .....              | 30 |
| 3.4      | Hamiltonian Cycles as Hitting Time Variance Minimisers .... | 36 |
| <b>4</b> | <b>Markov Decision Processes</b> .....                      | 49 |
| 4.1      | Introduction .....  | 49 |
| 4.2      | Markov Decision Processes .....                             | 49 |
| 4.3      | Occupational Measures .....                                 | 56 |
| 4.4      | Extreme Points and 1-randomised Policies .....              | 58 |
| 4.5      | A Parameter-Free Model .....                                | 61 |

## Part III Optimisation

|          |                                  |    |
|----------|----------------------------------|----|
| <b>5</b> | <b>Determinants</b>              | 69 |
| 5.1      | Introduction                     | 69 |
| 5.2      | Optimality at Hamiltonian Cycles | 70 |
| 5.2.1    | Unperturbed Case                 | 73 |
| 5.2.2    | Perturbed Case                   | 81 |
| <b>6</b> | <b>Traces</b>                    | 91 |
| 6.1      | Introduction                     | 91 |
| 6.2      | Optimality at Hamiltonian Cycles | 91 |
| 6.2.1    | Unperturbed Case                 | 92 |
| 6.2.2    | Perturbed Case                   | 97 |

## Part IV Algorithms

|          |  |     |
|----------|--|-----|
| <b>7</b> | <b>Linear Programming Based Algorithms</b>             | 113 |
| 7.1      | Introduction   | 113 |
| 7.2      | Branch and Fix Method                                  | 115 |
| 7.3      | An Algorithm that Implements the Branch and Fix Method | 122 |
| 7.4      | Wedge Constraints                                      | 130 |
| 7.5      | The Wedged-MIP heuristic                               | 134 |
| <b>8</b> | <b>Interior Point and Cross-Entropy Algorithms</b>     | 143 |
| 8.1      | Introduction   | 143 |
| 8.2      | Interior Point Method Algorithm                        | 144 |
| 8.3      | Cross-Entropy Algorithm                                | 150 |
| 8.4      | Open Algorithmic Problems                              | 156 |

## Part V Geometric Approaches

|           |   |     |
|-----------|---|-----|
| <b>9</b>  | <b>Self-similar Structure and Hamiltonicity</b> | 163 |
| 9.1       | Introduction                                    | 163 |
| 9.2       | Preliminaries                                   | 164 |
| 9.3       | Self-similar Multifilar Structure               | 165 |
| 9.4       | Self-similarity and Hamiltonicity               | 174 |
| <b>10</b> | <b>Graph Enumeration</b>                        | 179 |
| 10.1      | Introduction                                    | 179 |
| 10.2      | Subdivision-equivalent Edges                    | 180 |
| 10.3      | Enumerating Cubic Bridge Graphs                 | 185 |
|           | References                                      | 193 |

|              |     |
