

Contents

1	Maternal Exercise Throughout Gestation and Fetal Development.	1
	Background	2
	Fetal Activity State	2
	Fetal Breathing Movements	3
	Fetal Cardiovascular Development.	4
	Fetal Motor Activity	7
	Fetal Nervous System Development.	8
	Further Research	9
2	Effects of Maternal Exercise on Labor and Delivery	11
3	Fetal and Postnatal Growth and Development.	15
	Birth Weight.	16
	Other Morphometric Measures	17
	Postnatal Growth.	18
	Future Research	18
4	Effect on Postnatal Health and Beyond	19
	Cardiovascular System.	20
	Nervous System	20
	Intelligence.	21
	Neurobehavioral/Temperament	22
	Adiposity	22
	Breastfeeding	22
	Conclusion	23
	Future Research	23

5	What are the Barriers to and What is OK for an Exercise Study .	25
	Barriers to Exercise	26
	Current Guidelines Regarding Physical Activity During Pregnancy . . .	28
	Who can Exercise While Pregnant.	28
	When to Start Exercise During Pregnancy	28
	Aerobic Exercise for Pregnant Women	29
	Frequency and Duration	29
	Intensity of Aerobic Activity.	30
	Type of Aerobic	30
	Strength Training During Pregnancy	31
	Duration and Types of Strength Training	31
	Intensity and Frequency	32
	General Considerations During Pregnancy and Exercise.	33
6	Conclusions	35
	References	37

Physiology of Prenatal Exercise and Fetal Development

May, L.E.

2012, VIII, 44 p., Softcover

ISBN: 978-1-4614-3407-8
