

Contents

1	Introduction	1
1.1	Principles for Confinement of Plasma by a Magnetic Field	1
1.2	Energy Balance in a Fusion Reactor	4
1.3	Magnetohydrodynamic Stability	7
1.4	Transport	8
1.5	Scaling Laws for Confinement of Plasma in Toroidal Systems	9
1.6	The Standpoint of Fusion Research Today	9
	References	10
2	Different Ways of Describing Plasma Dynamics	11
2.1	General Particle Description, Liouville and Klimontovich Equations	11
2.2	Kinetic Theory as Generally Used by Plasma Physicists	13
2.3	Gyrokinetic Theory	14
2.4	Fluid Theory as Obtained by Taking Moments of the Vlasov Equation	15
	2.4.1 The Maxwell Equations	16
	2.4.2 The Low Frequency Expansion	16
	2.4.3 The Energy Equation	18
2.5	Gyrofluid Theory as Obtained by Taking Moments of the Gyrokinetic Equation	20
2.6	One Fluid Equations	21
2.7	Finite Larmor Radius Effects in a Fluid Description	22
	2.7.1 Effects of Temperature Gradients	25
	References	26

3	Fluid Description for Low Frequency Perturbations in an Inhomogeneous Plasma	27
3.1	Introduction	27
3.2	Elementary Picture of Drift Waves	29
3.2.1	Effects of Finite Ion Inertia	32
3.2.2	Drift Instability	34
3.2.3	Excitation by Electron-Ion Collisions	35
3.3	MHD Type Modes	36
3.3.1	Alfvén Waves	37
3.3.2	Interchange Modes	37
3.3.3	The Convective Cell Mode	40
3.3.4	Electromagnetic Interchange Modes	40
3.3.5	Kink Modes	43
3.3.6	Stabilization of Electrostatic Interchange Modes by Parallel Electron Motion	45
3.3.7	FLR Stabilization of Interchange Modes	45
3.3.8	Kinetic Alfvén Waves	47
3.4	Quasilinear Diffusion	49
3.5	Confinement Time	52
3.6	Discussion	53
	References	55
4	Kinetic Description of Low Frequency Modes in Inhomogeneous Plasma	57
4.1	Integration Along Unperturbed Orbits	57
4.2	Universal Instability	63
4.3	Interchange Instability	65
4.4	Drift Alfvén Waves and β Limitation	67
4.5	Landau Damping	70
4.6	The Magnetic Drift Mode	71
4.7	The Drift Kinetic Equation	72
4.8	Dielectric Properties of Low Frequency Vortex Modes	73
4.9	Finite Larmor Radius Effects Obtained by Orbit Averaging	76
4.10	Discussion	80
4.11	Exercises	80
	References	81
5	Kinetic Descriptions of Low Frequency Modes Obtained by Gyroaveraging	83
5.1	The Drift Kinetic Equation	83
5.1.1	Moment Equations	87
5.1.2	The Magnetic Drift Mode	88
5.1.3	The Tearing Mode	89

5.2	The Linear Gyrokinetic Equation.....	90
5.2.1	Applications.....	94
5.3	The Nonlinear Gyrokinetic Equation.....	96
5.4	Gyro-Fluid Equations.....	99
	References.....	100
6	Low Frequency Modes in Inhomogeneous Magnetic Fields.....	101
6.1	Anomalous Transport in Systems with Inhomogeneous Magnetic Fields.....	101
6.2	Toroidal Mode Structure.....	103
6.3	Curvature Relations.....	107
6.4	The Influence of Magnetic Shear on Drift Waves.....	110
6.5	Interchange Perturbations Analysed by the Energy Principle Method.....	113
6.6	Eigenvalue Equations for MHD Type Modes.....	116
6.6.1	Stabilization of Interchange Modes by Magnetic Shear	116
6.6.2	Ballooning Modes	119
6.7	Trapped Particle Instabilities	128
6.8	Reactive Drift Modes.....	131
6.8.1	Ion Temperature Gradient Modes	132
6.8.2	Electron Temperature Gradient Mode	135
6.8.3	Trapped Electron Modes	136
6.9	Competition Between Inhomogeneities in Density and Temperature.....	139
6.10	Advanced Fluid Models	140
6.10.1	The Development of Research.....	141
6.10.2	Closure.....	144
6.10.3	Gyro-Landau Fluid Models.....	146
6.10.4	Nonlinear Kinetic Fluid Equations	147
6.10.5	Comparisons with Nonlinear Gyrokinetics.....	148
6.11	Reactive Fluid Model for Strong Curvature.....	150
6.11.1	The Toroidal η_i Mode	151
6.11.2	Electron Trapping.....	154
6.11.3	Transport.....	156
6.11.4	Normalization of Transport Coefficients	158
6.11.5	Finite Larmor Radius Stabilization.....	159
6.11.6	The Eigenvalue Problem for Toroidal Drift Waves	160
6.11.7	Early Tests of the Reactive Fluid Model.....	163
6.12	Electromagnetic Modes in Advanced Fluid Description.....	164
6.12.1	Equations for Free Electrons Including Kink Term	165
6.12.2	Kinetic Ballooning Modes.....	167

6.13	Resistive Edge Modes	168
6.13.1	Resistive Ballooning Modes.....	170
6.13.2	Transport in the Enhanced Confinement State	173
6.14	Discussion.....	175
	References.....	176
7	Transport, Overview and Recent Developments	181
7.1	Stability and Transport.....	181
7.2	Momentum Transport.....	181
7.2.1	Simulation of an Internal Barrier.....	183
7.2.2	Simulation of an Edge Barrier.....	184
7.3	Discussion.....	187
	References.....	187
8	Instabilities Associated with Fast Particles	
	in Toroidal Confinement Systems.....	191
8.1	General Considerations	191
8.2	The Development of Research.....	192
8.3	Dilution Due to Fast Particles	193
8.4	Fishbone Type Modes	194
8.5	Toroidal Alfvén Eigenmodes.....	195
8.6	Discussion.....	197
	References.....	198
9	Nonlinear Theory.....	199
9.1	The Ion Vortex Equation	199
9.2	The Nonlinear Dielectric	207
9.3	Diffusion	208
9.4	Fokker-Planck Transition Probability	212
9.5	Discussion.....	215
	References.....	215
	General References	219
	Answers to Exercises	221
	Index	225
