

Contents

1	Stochastic Approach to Global Optimization at a Glance	1
1.1	Random Search.....	1
1.2	Adaptive Search	4
1.3	Markovian Algorithms	5
1.4	Population Algorithms	6
2	Unconstrained Local Optimization	7
2.1	The Curve of Steepest Descent	7
2.2	Numerical Analysis	16
3	Unconstrained Global Optimization	21
3.1	A Randomized Curve of Steepest Descent	21
3.2	Concepts of Numerical Analysis	34
3.3	A Semi-implicit Euler Method	36
3.4	An Euler Method with Gradient Approximations	52
4	Application: Optimal Decoding in Communications Engineering	57
4.1	Channel Coding	57
4.2	Decoding	59
5	Constrained Global Optimization	75
5.1	Introduction	75
5.2	A Penalty Approach.....	82
5.3	Equality Constraints	87
5.4	General Case	98
6	Vector Optimization	105
6.1	Introduction	105
6.2	The Curve of Dominated Points	106
6.3	A Randomized Curve of Dominated Points	110
6.4	An Euler Method	112
6.5	Constraints	116

Appendix A: A Short Course in Probability Theory	119
Appendix B: Pseudorandom Numbers	127
Appendix C: White Noise Disturbances	133
References	141
Index	145

Global Optimization

A Stochastic Approach

Schäffler, S.

2012, XVI, 148 p., Hardcover

ISBN: 978-1-4614-3926-4
