

Contents

1	Dynamics in Mechatronic Systems	1
1.1	Dynamical Processes in Electric Circuits	2
1.1.1	Constitutive Relations of Elements of Electric Circuits	2
1.1.2	Application of Hamilton's Principle and Lagrange's Equations to Electrical Systems	6
1.2	Dynamical Processes in Mechatronic Systems	13
1.2.1	Mechatronic Transducers	15
1.2.2	Magnetic Force in a Single Mechatronic System	26
1.3	Magnetic Levitation	32
1.3.1	The Analyzed System	33
1.3.2	Two Cases of Numerical Control	34
1.4	String-Type Generator	37
1.4.1	Analyzed System	38
1.4.2	Averaging Method	39
1.4.3	Numerical Analysis and Results	43
1.5	Rotor Supported by Magnetohydrodynamic Bearing	50
1.5.1	Mathematical Model	53
1.5.2	Soft Magnetic Materials	56
	References	85
2	Equations of Motion of a Rigid Spherical Body	87
2.1	Kinematics of Rigid-Body Motion	87
2.1.1	The Euler Angles	87
2.1.2	Cardan Angles	93
2.2	Kinetic Energy of a Rigid Body	97
2.2.1	Equations of Spherical Motion of a Rigid Body	98
2.2.2	The Euler Case and Geometric Interpretation of Motion of a Body by Poinot	103
2.2.3	Lagrange Case (Pseudoregular Precession)	110

2.2.4	The Kovalevskaya Case of Spherical Motion of a Rigid Body	114
2.2.5	Essence of Gyroscopic Effect	118
	References	123
3	Theory of Gyroscopes	125
3.1	Elements of Gyroscope Classification	125
3.2	Evolution of Gyroscope Concept	126
3.3	Fundamental Stages of Gyroscope Development	128
3.3.1	Directional Gyroscope	132
3.3.2	Gyroscopic Vertical	132
3.3.3	Stabilized Gyroscopic Platform	133
3.3.4	Laser Gyroscope	134
3.4	Fiber-Optic Gyroscope	135
3.5	Piezoelectric Gyroscope	136
3.6	Fork Gyroscope	139
3.7	Microgyroscope with a Spinning Disk	140
3.8	Microgyroscope with Vibrating Ring	140
3.9	Examples of Gyroscopic Pilotage Devices	142
3.10	Example of an Observation Instrument with a Built-in Gyroscope	145
3.11	New Challenges for a Gyroscope	146
	References	147
4	Dynamics and Control of a Gyroscope	149
4.1	Dynamics of a Gyroscope on a Movable Platform	149
4.1.1	Astatic Gyroscope on a Fixed Platform with Axis Stiff-Connected to Rotor	160
4.1.2	Simplified Equations (Technical) of Motion of a Gyroscope	164
4.1.3	Remarks on the Model of Gyroscopic Motion	165
4.2	Gyroscope Control	165
4.2.1	Motion Control of Gyroscope Axis in an Open System: The Inverse Problem in Gyroscope Dynamics	166
4.2.2	Numerical Example	172
4.2.3	Control with Constant Programmable Moments	174
4.2.4	Numerical Example	176
4.3	Motion Control of Gyroscope Axis in a Closed System	176
4.3.1	Gyroscopic System with PID Regulator	178
4.3.2	Program Control with Feedback	184
4.4	Selection of Optimal Parameters of a Gyroscopic System in Elastic Suspension	187
4.4.1	Selection of Optimal Parameters of a Gyroscope in Elastic Suspension	187
4.4.2	Optimal Control of a Gyroscope in an Elastic Suspension ..	191
4.4.3	Results of Digital Investigations	195

4.5	Selection of Optimal Parameters of a Gyroscopic System with an Axis Fixed to Rotor	199
4.5.1	Optimization of a Classic Controlled Gyroscope	199
	References	207
5	Gyroscopic Control in Self-Guidance Systems of Flying Objects	209
5.1	Gyroscope in an Unmanned Aerial Vehicle	209
5.1.1	Navigation Kinematics of a UAV	210
5.1.2	Control of an Axis of a Gyroscope on Board a Combat UAV	220
5.1.3	Control of UAV Motion	223
5.1.4	Final Remarks	224
5.2	Gyroscope in a Guided Aerial Bomb	224
5.2.1	Kinematics of a Bomb's Self-Guided Motion to a Ground Target	226
5.2.2	Equations of Motion of a Guided Bomb	232
5.2.3	A Gyroscopic System of Bomb Control	236
5.2.4	Control Law for Automatic Pilot of a Guided Bomb	239
5.2.5	Results and Final Conclusions	240
	References	250
