

Contents

- 1 Introduction** 1
 - 1.1 History 1
 - 1.1.1 Applications 2
 - 1.1.2 Algorithms 6
 - 1.2 Contributions 9
 - 1.3 Notations and Models 10
 - 1.3.1 Objective Functions 10
 - 1.3.2 Constraint Sets 12
 - 1.3.3 Models and Organization 13
 - 1.4 Preliminary 14
 - 1.4.1 Tensor Operations 15
 - 1.4.2 Approximation Algorithms 17
 - 1.4.3 Randomized Algorithms 18
 - 1.4.4 Semidefinite Programming Relaxation and Randomization .. 19
- 2 Polynomial Optimization Over the Euclidean Ball** 23
 - 2.1 Multilinear Form 24
 - 2.1.1 Computational Complexity 25
 - 2.1.2 Cubic Case 26
 - 2.1.3 General Fixed Degree 29
 - 2.2 Homogeneous Form 30
 - 2.2.1 Link Between Multilinear Form and Homogeneous Form 31
 - 2.2.2 The Odd Degree Case 32
 - 2.2.3 The Even Degree Case 33
 - 2.3 Mixed Form 35
 - 2.3.1 Complexity and a Step-by-Step Adjustment 36
 - 2.3.2 Extended Link Between Multilinear Form and Mixed Form 39
 - 2.4 Inhomogeneous Polynomial 40
 - 2.4.1 Homogenization 43
 - 2.4.2 Multilinear Form Relaxation 44

2.4.3	Adjusting the Homogenizing Components	46
2.4.4	Feasible Solution Assembling.....	49
3	Extensions of the Constraint Sets	53
3.1	Hypercube and Binary Hypercube	53
3.1.1	Multilinear Form.....	55
3.1.2	Homogeneous Form	59
3.1.3	Mixed Form	62
3.1.4	Inhomogeneous Polynomial.....	64
3.1.5	Hypercube	70
3.2	The Euclidean Sphere.....	70
3.3	Intersection of Co-centered Ellipsoids	74
3.3.1	Multilinear Form.....	76
3.3.2	Homogeneous Form	81
3.3.3	Mixed Form	83
3.3.4	Inhomogeneous Polynomial.....	84
3.4	Convex Compact Set.....	87
3.5	Mixture of Binary Hypercube and the Euclidean Sphere	90
3.5.1	Multilinear Form.....	91
3.5.2	Homogeneous Form	94
3.5.3	Mixed Form	96
4	Applications	99
4.1	Homogeneous Polynomial Optimization Over the Euclidean Sphere.....	99
4.1.1	Singular Values of Trilinear Forms	99
4.1.2	Rank-One Approximation of Tensors.....	100
4.1.3	Eigenvalues and Approximation of Tensors	101
4.1.4	Density Approximation in Quantum Physics.....	103
4.2	Inhomogeneous Polynomial Optimization Over a General Set	104
4.2.1	Portfolio Selection with Higher Moments	104
4.2.2	Sensor Network Localization	105
4.3	Discrete Polynomial Optimization	106
4.3.1	The Cut-Norm of Tensors	106
4.3.2	Maximum Complete Satisfiability	107
4.3.3	Box-Constrained Diophantine Equation	108
4.4	Mixed Integer Programming.....	109
4.4.1	Matrix Combinatorial Problem	109
4.4.2	Vector-Valued Maximum Cut	110
5	Concluding Remarks	113
	References.....	119

Approximation Methods for Polynomial Optimization
Models, Algorithms, and Applications

Li, Z.; He, S.; Zhang, S.

2012, VIII, 124 p., Softcover

ISBN: 978-1-4614-3983-7
