

Contents

1	A First Tour Through R by Example	1
1.1	Getting Started	1
1.2	The Experiment of Hecht, Shlaer and Pirenne	2
1.2.1	Accessing the Data Set	2
1.2.2	Viewing the Data Set	5
1.2.3	One More Plot Before Modeling	7
1.3	Modeling the Data	8
1.3.1	Modeling a Subset of the Data	10
1.3.2	Estimating Thresholds and jnd's	15
1.3.3	Modeling All of the Data	16
1.3.4	Odds and Ends	19
1.4	Exercises	20
2	Modeling in R	21
2.1	Introduction	21
2.2	The Linear Model	21
2.2.1	Development of First- and Second-Order Motion	26
2.3	Linear Mixed-Effects Models	32
2.3.1	The ModelFest Data Set	33
2.4	Nonlinear Models	44
2.4.1	Chromatic Sensitivity Across the Life Span	45
2.5	Additive Models	49
2.5.1	Chromatic Sensitivity, Again	50
2.6	Generalized Linear Models	53
2.6.1	Chromatic Sensitivity, Yet Again	54
2.7	Which Model to Choose?	56
2.8	Exercises	57
3	Signal Detection Theory	61
3.1	Introduction	61
3.2	Sensory and Decision Spaces	61
3.2.1	Optimal Detection	63

3.3	Case 1: Equal-Variance Gaussian SDT	64
3.3.1	The Decision Rule for Equal-Variance Gaussian SDT	66
3.3.2	Simulating and Fitting Equal-Variance Gaussian SDT	66
3.3.3	Maximum Likelihood Estimation of Equal-Variance Gaussian SDT Parameters	68
3.3.4	Fisher's Tea Test	69
3.3.5	Fitting Equal-Variance SDT as a GLM	72
3.3.6	Fitting with Multiple Conditions	74
3.3.7	Complete Separation	77
3.3.8	The Receiver Operating Characteristic	79
3.4	Case 2: Unequal-Variance Gaussian SDT	81
3.4.1	The Decision Rule for Unequal-Variance Gaussian SDT	81
3.4.2	Simulating Unequal-Variance Gaussian SDT	82
3.4.3	Fitting Unequal-Variance Gaussian SDT by Direct Optimization	85
3.5	Case 3: Exponential SDT	88
3.6	m-Alternative Forced-Choice and Other Paradigms	89
3.6.1	Letter Identification: 4AFC	90
3.6.2	d' for Other Paradigms	91
3.7	Rating Scales	91
3.7.1	Ordinal Regression Models on Cumulative Probabilities ...	94
3.7.2	Sensitivity to Family Resemblance	99
4	The Psychometric Function: Introduction	107
4.1	Brief Historical Review	107
4.2	Fitting Psychometric Functions to Data	113
4.2.1	Direct Maximization of Likelihood	114
4.3	A Model Psychophysical Observer	120
4.4	Fitting Psychometric Functions with <code>glm</code>	121
4.4.1	Alignment Judgments of Drifting Grating Pairs	123
4.4.2	Selecting Models and Analysis of Deviance	126
4.5	Diagnostic Plots	129
4.6	Complete Separation	135
4.7	The Fitted Model	136
4.8	Summary	138
5	The Psychometric Function: Continuation	141
5.1	Fitting Multiple-Alternative Forced Choice Data Sets	141
5.1.1	Using an Offset to Set the Lower Asymptote	142
5.1.2	Using Specialized Link Functions to Set the Lower Asymptote	145
5.1.3	Estimating Upper and Lower Asymptotes	147
5.2	Staircase Methods	151
5.3	Extracting Fitted Parameters	153
5.4	Methods for Standard Errors and Confidence Intervals	155

5.5	Bootstrap Standard Error Estimates	157
5.6	Nonparametric Approaches	163
6	Classification Images	167
6.1	Ahumada's Experiment	167
6.1.1	Simulating a Classification Image Experiment	169
6.1.2	The Information Used in Offset Detection	172
6.2	Some History	174
6.3	The Classification Image as a Linear Model	175
6.3.1	Detection of a Gabor Temporal Modulation	175
6.3.2	Estimation by a Linear Model	177
6.3.3	Estimation with <code>lm</code>	177
6.3.4	Model Evaluation	178
6.4	Classification Image Estimation with <code>glm</code>	179
6.5	Fitting a Smooth Model	183
6.5.1	Higher-Order Classification Images	187
6.6	Comparing Methods	188
7	Maximum Likelihood Difference Scaling	195
7.1	Introduction	195
7.1.1	Choosing the Quadruples	199
7.1.2	Data Format	200
7.1.3	Fitting the Model: Direct Maximization	201
7.1.4	GLM Method	203
7.1.5	Representation as a Ratio Scale	205
7.2	Perception of Correlation in Scatterplots	205
7.2.1	Estimating a Difference Scale	207
7.2.2	Fitting a Parametric Difference Scale	209
7.2.3	Visualizing the Decision Space for Difference Judgments ..	211
7.3	The Method of Triads	214
7.4	The Effect of Number of Trials	215
7.5	Bootstrap Standard Errors	217
7.6	Robustness and Diagnostic Tests	219
7.6.1	Goodness of Fit	219
7.6.2	Diagnostic Test of the Measurement Model	223
8	Maximum Likelihood Conjoint Measurement	229
8.1	Introduction	229
8.2	The Model	233
8.3	The Nonparametric Model	236
8.3.1	Fitting the Nonparametric Model Directly by Maximum Likelihood	240
8.3.2	Fitting the Nonparametric Model with <code>glm</code>	241
8.4	Fitting Parametric Models	249

8.5	Resampling Methods	252
8.5.1	The Choice of Stimuli	252
8.6	The Axiomatic Model	254
9	Mixed-Effects Models	257
9.1	Simple Detection	259
9.1.1	Random Criterion Effects	259
9.1.2	Random Sensitivity Effects	263
9.2	Rating Scale Data	264
9.3	Psychometric Functions: Random Intercepts and Slopes.....	267
9.3.1	Context Effects on Detection	276
9.3.2	Multiple-Alternative Forced-Choice Data	286
9.4	MLDS	287
9.4.1	Regression on the Decision Variable: Fixed Functional Form	287
9.4.2	Regression on the Decision Variable: Rescaling to a Common Scale	290
9.4.3	Regression on the Estimated Coefficients	295
9.5	Whither from Here	301
A	Some Basics of R	303
A.1	Installing R	303
A.2	Basic Data Types	304
A.2.1	Vectors	304
A.2.2	Factors	309
A.2.3	Lists	310
A.2.4	Data Frames.....	311
A.2.5	Other Types of Objects	313
A.3	Simple Programming Constructs	313
A.4	Interacting with the Operating System	313
A.5	Getting Data into and Out of R	314
A.5.1	Writing and Reading Text Files	315
A.5.2	<code>write.table</code>	315
A.5.3	<code>read.table</code>	315
A.5.4	<code>scan</code>	317
A.5.5	<code>save</code> and <code>load</code>	317
A.5.6	Interacting with Matlab	318
A.5.7	Interacting with Excel Files	318
A.5.8	Reading in Other Formats	318
B	Statistical Background	321
B.1	Introduction	321
B.2	Random Variables and Monte Carlo Methods	323
B.2.1	Finite, Discrete Random Variables	323
B.2.2	Bernoulli Random Variables	324

B.2.3	Continuous Random Variables	324
B.2.4	Discrete vs Continuous Random Variables	325
B.2.5	Normal (Gaussian) Random Variables	326
B.2.6	Location-Scale Families	327
B.3	Independence and Samples	328
B.3.1	Expectation and Moments	329
B.3.2	Bernoulli and Binomial Random Variables	331
B.3.3	Uniform Random Variables	331
B.3.4	Exponential and Gamma Random Variables	333
B.3.5	The Exponential Family	333
B.3.6	Monte Carlo Methods	335
B.4	Estimation	335
B.4.1	What Makes an Estimate “Good”?	336
B.4.2	Maximum Likelihood Estimation	337
B.4.3	Why Likelihood? Some Properties	340
B.4.4	Bayesian Estimation	342
B.5	Nested Hypothesis Testing	347
B.5.1	Reparameterization: Nested Hypothesis Tests	349
B.5.2	The Akaike Information Criterion	349
