<b>1</b>	<b>1900–1962: From Planck to Bohr</b> . . . . .	<b>1</b>
<b>2</b>	<b>1913. “On the Constitution of Atoms and Molecules”: Quantum Jumps and Epistemological Leaps</b> . . . . .	<b>17</b>
<b>3</b>	<b>1925. “Atomic Theory and Mechanics”: From the Old Quantum Theory to Heisenberg’s Quantum Mechanics</b> . . . . .	<b>27</b>
	3.1 From Bohr to Heisenberg, and from Heisenberg to Bohr . . . . .	27
	3.2 Atomic Theory and Mechanics . . . . .	30
	3.3 Quantum Mechanics and the Correspondence Principle. . . . .	35
	3.4 Quantum Mechanics and the Relationships Between Mathematics and Physics . . . . .	37
<b>4</b>	<b>1927. “The Quantum Postulate and the Recent Development of Atomic Theory” (The Como Lecture): Complementarity Versus Causality</b> . . . . .	<b>41</b>
	4.1 From Quantum Mechanics to Complementarity . . . . .	41
	4.2 The Quantum Postulate: Discontinuity and Irrationality . . . . .	45
	4.3 Complementarity and the Problem of Causality . . . . .	51
<b>5</b>	<b>1929. “The Quantum of Action and the Description of Nature”: New Complementarities and a New Interpretation</b> . . . . .	<b>59</b>
	5.1 Beyond (and Against) the Como Argument. . . . .	59
	5.2 A Renunciation of the Causal Space–Time Mode of Description. . . . .	62
	5.3 Classical Concepts, the Uncertainty Relations, and Probability . . . . .	65

<b>6</b>	<b>1931. “The Space–Time Continuity and Atomic Physics” (the Bristol Lecture): Quantum Phenomena and the Double-Slit Experiment . . . . .</b>	<b>71</b>
6.1	Bohr’s Epistemology and the Double-Slit Experiment . . . . .	71
6.2	The Double-Slit Experiment: Physics and Epistemology . . . . .	73
6.3	The Uncertainty Relations, Complementarity, and Probability. . . . .	84
<b>7</b>	<b>1933. “On the Question of Measurability of Electromagnetic Field Quantities”: Complementarity and Quantum Field Theory . . . . .</b>	<b>89</b>
7.1	Quantum Field Theory in Bohr and Beyond . . . . .	89
7.2	Quantum Field Theory and Measurements. . . . .	94
7.3	How Many Particles? . . . . .	100
<b>8</b>	<b>1935. “Can Quantum-Mechanical Description of Physical Reality Be Considered Complete?”: The EPR Experiment and Complementarity . . . . .</b>	<b>107</b>
8.1	From BKS to EPR . . . . .	107
8.2	“Can Quantum-Mechanical Description of Physical Reality Be Considered Complete?”: EPR’s Argument . . . . .	114
8.3	“Can Quantum-Mechanical Description of Physical Reality Be Considered Complete?”: Bohr’s Argument. . . . .	116
8.4	Can Quantum-Mechanical Description of Physical Reality Be Considered Local?. . . . .	128
8.5	Postscript. 1927–1949. “Discussion with Einstein on Epistemological Problems in Atomic Physics” (A Post-EPR View) . . . . .	131
<b>9</b>	<b>1937–1938. “Complementarity and Causality” and “The Causality Problem in Atomic Physics” (The Warsaw Lecture): The Knowable and the Unthinkable . . . .</b>	<b>137</b>
9.1	New Concepts and New Epistemology . . . . .	137
9.2	Phenomena, Atomicity, and Quantum Objects . . . . .	138
9.3	Bohr’s Epistemology and Quantum Probability . . . . .	150
9.4	Einstein and Bohr on Locality and Probability in Quantum Mechanics . . . . .	153
9.5	Postscript on Complementarity and Bohr’s Epistemology Beyond Physics . . . . .	158

Contents	xix

Niels Bohr and Complementarity

An Introduction

Plotnitsky, A.

2012, XXI, 199 p. 2 illus., Softcover

ISBN: 978-1-4614-4516-6
