

# Contents

- 1 Introduction: The Twin Mysteries of Mass . . . . . 1**
  - The Quality of Inertia . . . . . 1
    - Straight-Line Motion . . . . . 2
    - Forces in Combination . . . . . 3
    - The Independence of the Effects of Perpendicular Forces on Straight-Line Motion . . . . . 4
    - Inertial Frames of Reference and Relative Motion . . . . . 5
  - The Attraction of Masses . . . . . 7
    - The Force of Gravity: Falling . . . . . 7
    - The Attractive Force of Gravity . . . . . 8
    - Gravity and Distance . . . . . 9
    - Newton’s Universal Law of Gravitation . . . . . 9
    - Gravitational Acceleration . . . . . 10
    - Gravitation and the Laws of Motion . . . . . 11
  - Gravity, Inertia, and Curvilinear Motion in Space . . . . . 13
  - Reference . . . . . 15
- 2 Galileo’s Great Discovery: How Things Fall . . . . . 17**
  - The Distance a Thing Falls . . . . . 17
  - The Meaning of Constant Acceleration . . . . . 20
    - Graphing Velocity and Time in Uniformly Accelerated Motion . . . . . 23
    - If Galileo Only Knew Calculus: A Quick Look at Instantaneous Velocity . . . . . 27
    - Using Limits to Find the Acceleration of a Freely-Falling Body . . . . . 31
  - A Summary of Galilean Equations . . . . . 33
    - Notes on Using the Law of Conservation of Mechanical Energy to Derive the Galilean Distance Equation . . . . . 33
  - Reference . . . . . 36
