

CONTENTS

Preface	vii
Chapter 1	
Type 2 diabetes: rationale for pharmacological treatment	1
1. Introduction	1
2. Type 2 diabetes: a progressive disorder	5
3. Pathophysiology	7
4. Safety of intensive glucose-lowering strategies in high-risk patients	11
5. Therapeutic approaches	17
6. Guidelines and treatment algorithms	19
Chapter 2	
Established classes of glucose-lowering drugs	27
1. Introduction	27
2. Biguanides	28
3. Sulphonylureas	32
4. Meglitinides	36
5. Thiazolidinediones	38
6. Alpha-glucosidase inhibitors	47
7. Fixed dose combinations of orally active drugs	50
8. Principles of insulin therapy in type 2 diabetes	50
9. Weight-reducing drugs	59
Chapter 3	
Recently introduced and emerging classes of glucose-lowering drugs	63
1. Drugs acting on the incretin system	63
2. Pathophysiology of the incretin system in type 2 diabetes	63
3. Dipeptidyl peptidase 4 inhibitors	65
4. Glucagon-like peptide 1 agonists	71
5. Amylin analogues	78
6. Bromocriptine	79
7. Drugs in development	80
Chapter 4	
The place of newer drugs in treatment algorithms	83
1. Recommended management of type 2 diabetes	83
2. Current NICE guidance: oral glucose-lowering drugs	84
3. NICE guidance: injectable agents	88
4. National and international guidelines compared	89
Index	97
