

Contents

Preface	ix
1 Lagrangian and Hamiltonian Systems	
1.1 The formalism of classical mechanics	1
1.2 Tonelli systems	7
1.3 Action minimizers	11
2 The Morse Indices in Lagrangian Dynamics	
2.1 The Morse index and nullity	29
2.2 Bott's iteration theory	35
2.3 A symplectic excursion: the Maslov index	42
3 Functional Setting for the Lagrangian Action	
3.1 Hilbert manifold structures for path spaces	50
3.2 Topological properties of the free loop space	54
3.3 Convex quadratic-growth Lagrangians	59
3.4 Regularity of the action functional	63
3.5 Critical points of the action functional	70
3.6 The mean action functional in higher periods	77
4 Discretizations	
4.1 Uniqueness of the action minimizers	80
4.2 The broken Euler-Lagrange loop spaces	86
4.3 The discrete action functional	89
4.4 Critical points of the discrete action	91
4.5 Homotopic approximation of the action sublevels	99
4.6 Multiplicity of periodic orbits with prescribed period	103
4.7 Discretizations in higher period	106
5 Local Homology and Hilbert Subspaces	
5.1 The abstract result	110
5.2 The generalized Morse lemma revisited	112

5.3	Naturality of the Morse lemma	117
5.4	Local homology	119
5.5	Application to the action functional	123
6	Periodic Orbits of Tonelli Lagrangian Systems	
6.1	Convex quadratic modifications	128
6.2	Multiplicity of periodic orbits with prescribed period	133
6.3	Discrete Tonelli action	135
6.4	Homological vanishing by iteration	138
6.5	The Conley conjecture	151
	Appendix: An Overview of Morse Theory	157
A.1	Preliminaries	158
A.2	The generalized Morse Lemma	159
A.3	Deformation of sublevels	160
A.4	Passing a critical level	165
A.5	Local homology and Gromoll-Meyer pairs	168
A.6	Minimax	170
	Bibliography	173
	List of Symbols	179
	Index	185

Critical Point Theory for Lagrangian Systems

Mazucchelli, M.

2012, XII, 188 p., Hardcover

ISBN: 978-3-0348-0162-1

A product of Birkhäuser Basel
