<b>Foreword</b>	<b>v</b>
<b>1 The De Giorgi Method for Nonlocal Fluid Dynamics</b>	<b>1</b>
<i>Luis A. Caffarelli and Alexis Vasseur</i>	
Introduction . . . . .	1
1.1 The De Giorgi theorem . . . . .	2
1.1.1 Sobolev and energy inequalities . . . . .	3
1.1.2 Proof of the De Giorgi theorem . . . . .	4
1.2 Integral diffusion and the quasi-geostrophic equation . . . . .	11
1.2.1 Quasi-geostrophic flow equation . . . . .	11
1.2.2 Riesz transforms and the dependence of $v$ on $\theta$ . . . . .	12
1.2.3 BMO spaces . . . . .	12
1.2.4 The fractional Laplacian and harmonic extensions . . . . .	13
1.2.5 Regularity . . . . .	15
1.2.6 A geometric description of the argument . . . . .	22
1.2.7 First part . . . . .	23
1.2.8 Second part . . . . .	30
1.2.9 Oscillation lemma . . . . .	34
1.2.10 Proof of Theorem 11 . . . . .	34
Bibliography . . . . .	37
<b>2 Recent Results on the Periodic Lorentz Gas</b>	<b>39</b>
<i>François Golse</i>	
Introduction: from particle dynamics to kinetic models . . . . .	39
2.1 The Lorentz kinetic theory for electrons . . . . .	41
2.2 The Lorentz gas in the Boltzmann–Grad limit with a Poisson distribution of obstacles . . . . .	44
2.3 Santaló’s formula for the geometric mean free path . . . . .	51
2.4 Estimates for the distribution of free-path lengths . . . . .	57
2.5 A negative result for the Boltzmann–Grad limit of the periodic Lorentz gas . . . . .	66

2.6	Coding particle trajectories with continued fractions . . . . .	71
2.7	An ergodic theorem for collision patterns . . . . .	79
2.8	Explicit computation of the transition probability $P(s, h h')$ . . . .	84
2.9	A kinetic theory in extended phase-space for the Boltzmann–Grad limit of the periodic Lorentz gas . . . . .	90
	Conclusion . . . . .	95
	Bibliography . . . . .	96
<b>3</b>	<b>The Boltzmann Equation in Bounded Domains</b>	<b>101</b>
	<i>Yan Guo</i>	
3.1	Introduction . . . . .	101
3.2	Domain and characteristics . . . . .	103
3.3	Boundary condition and conservation laws . . . . .	104
3.4	Main results . . . . .	105
3.5	Velocity lemma and analyticity . . . . .	107
3.6	$L^2$ decay theory . . . . .	107
3.7	$L^\infty$ decay theory . . . . .	108
	Bibliography . . . . .	112
<b>4</b>	<b>The Concentration-Compactness Rigidity Method for Critical Dispersive and Wave Equations</b>	<b>117</b>
	<i>Carlos E. Kenig</i>	
4.1	Introduction . . . . .	117
4.2	The Schrödinger equation . . . . .	121
4.3	The wave equation . . . . .	129
	Bibliography . . . . .	146
