Introduction	1
1 Levy processes	11
1.1 Main notions	11
1.2 Convolution type form of infinitesimal generator	13
1.3 Potential	19
1.4 Truncated generators and quasi-potentials	20
1.5 Probability of the Levy process remaining within the given domain	22
1.6 Non-negativity of the kernel $\Phi(x, y)$	25
1.7 Sectorial operators	26
1.8 Quasi-potential B , structure and properties	30
1.9 Long time behavior	32
1.10 Stable processes, main notions	39
1.11 Stable processes, quasi-potential	40
1.12 On sample functions behavior of stable processes	42
1.13 Wiener process	44
1.14 Iterated logarithm law, most visited sites and first hitting time . .	47
1.15 Two-sided estimation of the greatest eigenvalue of the operator B_α	51
2 The principle of imperceptibility of the boundary in the theory of stable processes	53
2.1 On a probabilistic inequality	53
2.2 A weakened principle of imperceptibility of the boundary	55
2.3 Cauchy process	58
2.4 Wiener process, case $\alpha = 2$	60
2.5 General case	61
3 Approximation of positive functions by linear positive polynomial operators	63
3.1 Introduction	63
3.2 The asymptotic formula for $C_n(\varphi, \alpha)$	64
3.3 Precise value of $C^*(\alpha)$	73

3.4	Korovkin's and Fejer's operators	74
4	Optimal prediction and matched filtering for generalized stationary processes	77
4.1	Introduction	77
4.2	Generalized stationary processes	79
4.3	Generalized processes, examples	80
4.4	Problem of optimal prediction	82
4.5	Generalized matched filters	83
5	Effective construction of a class of positive operators in Hilbert space, which do not admit triangular factorization	85
5.1	Introduction	85
5.2	A special class of operators and corresponding differential systems	86
5.3	Non-factorable positive definite operators, a sufficient condition . .	90
5.4	A class of non-factorable positive definite operators	92
5.5	Examples instead of existence theorems	96
5.6	White noise type process, a special case	97
6	Comparison of thermodynamic characteristics of quantum and classical approaches	101
6.1	Quasi-classical case	103
6.2	One-dimensional potential well	103
6.3	Harmonic oscillator	106
6.4	General case, statistical sum	107
6.5	General case, mean energy	111
6.6	Conclusion	112
7	Dual canonical systems and dual matrix string equations	113
7.1	Canonical differential system	116
7.2	On reduction of the canonical system to two dual differential systems	121
7.3	Spectral data and uniqueness theorems	127
7.4	Example	128
7.5	On a mean value theorem in the class of Nevanlinna functions and applications	129
7.6	Dual discrete canonical systems and dual orthogonal polynomials .	134
7.7	Classical discrete systems. Examples	140
8	Integrable operators and canonical differential systems	151
8.1	Integrable operators and Riemann–Hilbert problem	154
8.2	Limiting values of the multiplicative integral	157
8.3	Spectral theory	160
8.4	Canonical differential systems	161

8.5	Inverse problem, examples	163
9	The game between energy and entropy	169
9.1	Connection between energy and entropy (quantum case)	169
9.2	Connection between energy and entropy (classical case)	171
9.3	Third law of thermodynamics	173
9.4	Entropy and energy in non-extensive statistical mechanics	174
9.5	Algorithmic entropy, thermodynamics, and game interpretation . .	177
10	Inhomogeneous Boltzmann equations: distance, asymptotics and comparison of the classical and quantum cases	181
10.1	Introduction	181
10.2	Preliminaries: basic definitions and results	183
10.3	Extremal problem	185
10.4	Distance	186
10.5	Modified Boltzmann equations for Fermi and Bose particles	189
10.6	Modified extremal problem	190
10.7	Lyapunov functional	196
10.8	Conclusion	199
11	Operator Bezoutiant and roots of entire functions, concrete examples	201
11.1	Introduction	201
11.2	Main notions	204
11.3	Properties of the operator B	205
11.4	The explicit form of the Bezoutiant	208
11.5	Classes of entire functions without common zeroes	212
11.6	A generalization of the Schur–Cohn theorem, examples	218
	Comments	223
	Bibliography	227
	Glossary of important notations	241
	Index	243

Levy Processes, Integral Equations, Statistical Physics:
Connections and Interactions

Sakhnovich, L.

2012, X, 246 p., Hardcover

ISBN: 978-3-0348-0355-7

A product of Birkhäuser Basel
