Preface	ix
Introduction	xi
1 Preliminaries	1
1.1 Functional analysis	2
1.1.1 Banach spaces	2
1.1.2 Interpolation of Banach spaces	6
1.1.3 Invertibility of linear operators	8
1.1.4 Fixed point theorems	8
1.2 Function spaces	9
1.2.1 Hölder spaces	9
1.2.2 Measure and integral	12
1.2.3 Lebesgue measure in \mathbb{R}^d . Lebesgue spaces	16
1.3 Compact sets in L^p spaces	20
1.3.1 Functions of bounded variation	20
1.3.2 L^p spaces of Banach space valued functions	23
1.4 Young measures	29
1.5 Sobolev spaces	32
1.6 Mollifiers and DiPerna & Lions lemma	35
1.7 Partial differential equations	39
1.7.1 Elliptic equations	39
1.7.2 Stokes problem	42
1.7.3 Parabolic equations	43
2 Physical background	45
2.1 Governing equations	45
2.1.1 Isentropic flows. Compressible Navier-Stokes equations	47
2.2 Boundary and initial conditions	48
2.3 Power and work of hydrodynamic forces	50
2.4 Navier-Stokes equations in a moving frame	51
2.5 Flow around a moving body	53

3	Problem formulation	57
3.1	Weak solutions	59
3.2	Renormalized solutions	60
3.3	Work functional. Optimization problem	61
4	Basic statements	63
4.1	Introduction	63
4.2	Bounded energy functions	63
4.3	Functions of bounded mass dissipation rate	68
4.4	Compactness properties	69
4.4.1	Two lemmas on compensated compactness	71
4.4.2	Proof of Theorem 4.4.2	76
4.5	Basic integral identity	78
4.6	Continuity of viscous flux	87
4.7	Viscous flux. Localization	95
5	Nonstationary case. Existence theory	99
5.1	Problem formulation. Results	99
5.2	Regularized equations	105
5.3	Passage to the limit. The first level	118
5.3.1	Step 1. Convergence of densities and momenta	121
5.3.2	Step 2. Weak convergence of the kinetic energy tensor	122
5.3.3	Step 3. Weak limits of $\varepsilon \nabla \varrho_n \otimes \mathbf{u}_n$	124
5.3.4	Step 4. Proof of estimates (5.3.8–5.3.9)	125
5.3.5	Step 5. Proof of Theorem 5.3.1	129
5.3.6	Proof of Theorem 5.3.2	130
5.3.7	Local pressure estimate	132
5.3.8	Normal derivative of the density	136
5.4	Passage to the limit. The second level	139
5.5	Passage to the limit. The third level	157
6	Pressure estimate	167
7	Kinetic theory. Fast density oscillations	175
7.1	Problem formulation. Main results	175
7.2	Proof of Theorem 7.1.9	185
7.3	Proof of Theorem 7.1.12	204
7.4	Adiabatic exponent $\gamma > 3/2$	223
8	Domain convergence	225
8.1	Hausdorff and Kuratowski-Mosco convergences	225
8.2	Capacity, quasicontinuity and fine topology	229
8.3	Applications to flow around an obstacle	235
8.4	\mathcal{S} -compact classes of admissible obstacles	244

9	Flow around an obstacle. Domain dependence	249
9.1	Preliminaries	249
9.2	Existence theory	250
9.3	Main stability theorem	255
10	Existence theory in nonsmooth domains	281
10.1	Existence theory in nonsmooth domains	281
10.2	Continuity of the work functional	282
10.3	Applications of the stability theorem to optimization problems . .	296
11	Sensitivity analysis. Shape gradient of the drag functional	299
11.1	Introduction	299
11.1.1	Change of variables in Navier-Stokes equations	300
11.1.2	Extended problem. Perturbation theory	304
11.2	Existence of solutions	308
11.2.1	Function spaces. Results	308
11.2.2	Step 1. Estimates of composite functions	312
11.2.3	Step 2. Stokes equations	314
11.2.4	Step 3. Transport equations	315
11.2.5	Step 4. Fixed point scheme. Estimates	319
11.2.6	Step 5. Proof of Theorem 11.2.6	328
11.3	Dependence of solutions on \mathbf{N}	330
11.3.1	Problem formulation. Basic equations. Transposed problem	330
11.3.2	Transposed problem	333
11.3.3	Special dual space	347
11.3.4	Very weak solutions	348
11.3.5	Uniqueness and existence. Main theorem	354
11.4	Shape derivative	355
11.4.1	Preliminaries. Results	355
11.4.2	Proof of Theorem 11.4.6	359
11.4.3	Conclusion. Material and shape derivatives	370
11.5	Shape derivative of the drag functional. Adjoint state	371
12	Transport equations	377
12.1	Introduction	377
12.2	Existence theory in Sobolev spaces	380
12.3	Proof of Theorem 12.2.3	382
12.3.1	Normal coordinates	383
12.3.2	Model equation	384
12.3.3	Local estimates	385
12.3.4	Estimates near the inlet	390
12.3.5	Partition of unity	392
12.3.6	Proofs of Lemmas 12.3.2 and 12.3.3	395
12.3.7	Proof of Lemma 12.3.4	398

13 Appendix	407
13.1 Proof of Lemma 2.4.1	407
13.2 Normal coordinates	411
13.3 Geometric results. Approximation of unity	413
13.4 Singular limits of normal derivatives	418
Bibliography	441
Notation	451
Index	453

Compressible Navier-Stokes Equations

Theory and Shape Optimization

Plotnikov, P.; Sokołowski, J.

2012, XVI, 464 p., Hardcover

ISBN: 978-3-0348-0366-3

A product of Birkhäuser Basel
