Preface	ix
Preface to the Second Edition	xiii
Preface to the Third Edition	xv
1 Translation Groups	1
1.1 Real inner product spaces	1
1.2 Examples	2
1.3 Isomorphic, non-isomorphic spaces	3
1.4 Inequality of Cauchy–Schwarz	4
1.5 Orthogonal mappings	5
1.6 A characterization of orthogonal mappings	7
1.7 Translation groups, axis, kernel	10
1.8 Separable translation groups	14
1.9 Geometry of a group of permutations	16
1.10 Euclidean, hyperbolic geometry	20
1.11 A common characterization	21
1.12 Other directions, a counterexample	34
2 Euclidean and Hyperbolic Geometry	37
2.1 Metric spaces	37
2.2 The lines of L.M. Blumenthal	38
2.3 The lines of Karl Menger	43
2.4 Another definition of lines	45
2.5 Balls, hyperplanes, subspaces	46
2.6 A special quasi-hyperplane	50
2.7 Orthogonality, equidistant surfaces	51
2.8 A parametric representation	54
2.9 Ends, parallelity, measures of angles	56
2.10 Angles of parallelism, horocycles	61
2.11 Geometrical subspaces	63

2.12	The Cayley–Klein model	66
2.13	Hyperplanes under translations	70
2.14	Lines under translations	72
2.15	Hyperbolic coordinates	74
2.16	All isometries of (X, eucl) , (X, hyp)	75
2.17	Isometries preserving a direction	77
2.18	A characterization of translations	78
2.19	Different representations of isometries	79
2.20	A characterization of isometries	80
2.21	A counterexample	85
2.22	An extension problem	86
2.23	A mapping which cannot be extended	91
3	Sphere Geometries of Möbius and Lie	93
3.1	Möbius balls, inversions	93
3.2	An application to integral equations	96
3.3	A fundamental theorem	98
3.4	Involutions	102
3.5	Orthogonality	107
3.6	Möbius circles, M_N - and M^N -spheres	111
3.7	Stereographic projection	120
3.8	Poincaré’s model of hyperbolic geometry	123
3.9	Spears, Laguerre cycles, contact	133
3.10	Separation, cyclographic projection	139
3.11	Pencils and bundles	144
3.12	Lie cycles, groups $\text{Lie}(X)$, $\text{Lag}(X)$	150
3.13	Lie cycle coordinates, Lie quadric	154
3.14	Lorentz boosts	159
3.15	$\mathbb{M}(X)$ as part of $\text{Lie}(X)$	167
3.16	A characterization of $\text{Lag}(X)$	170
3.17	Characterization of the Lorentz group	172
3.18	Another fundamental theorem	173
4	Lorentz Transformations	175
4.1	Two characterization theorems	175
4.2	Causal automorphisms	177
4.3	Relativistic addition	181
4.4	Lightlike, timelike, spacelike lines	184
4.5	Light cones, lightlike hyperplanes	186
4.6	Characterization of some classes of hyperplanes	191
4.7	$\mathbb{L}(Z)$ as subgroup of $\text{Lie}(X)$	193
4.8	A characterization of LM-distances	194
4.9	Einstein’s cylindrical world	197
4.10	Lines, null-lines, subspaces	200

4.11	2-point invariants of $(C(Z), MC(Z))$	202
4.12	De Sitter's world	205
4.13	2-point invariants of $(\Sigma(Z), M\Sigma(Z))$	205
4.14	Elliptic and spherical distances	208
4.15	Points	210
4.16	Isometries	212
4.17	Distance functions of X_0	215
4.18	Subspaces, balls	217
4.19	Periodic lines	218
4.20	Hyperbolic geometry revisited	222
5	δ-Projective Mappings, Isomorphism Theorems	231
5.1	δ -linearity	231
5.2	All δ -affine mappings of (X, δ)	233
5.3	δ -projective hyperplanes	235
5.4	Extensions of δ -affine mappings	236
5.5	All δ -projective mappings	239
5.6	δ -dualities	240
5.7	The δ -projective Cayley-Klein model	242
5.8	M -transformations from X' onto V'	247
5.9	Isomorphic Möbius sphere geometries	249
5.10	Isomorphic Euclidean geometries	252
5.11	Isomorphic hyperbolic geometries	256
5.12	A mixed case	261
6	Planes of Leibniz, Lines of Weierstrass, Varia	265
6.1	L -hyperplanes of metric spaces	265
6.2	Hyperbolic hyperplanes as L -hyperplanes	267
6.3	Elliptic and spherical hyperplanes	270
6.4	Hyperplanes of Lorentz-Minkowski geometry	272
6.5	De Sitter's world as substructure of $(Z, \mathbb{L}(Z))$	273
6.6	Hyperplanes of de Sitter's world	275
6.7	Hyperbolic lines as defined by K. Weierstrass	279
6.8	Orthogonal lines in metric spaces	282
6.9	Lines orthogonal to hyperplanes	286
6.10	A fundamental representation of motions	286
6.11	Dimension-free hyperbolic geometry under mild hypotheses	289
6.12	All 2-point invariants of (P, G)	293
A	Notation and symbols	297
B	Bibliography	299
	Index	305

Classical Geometries in Modern Contexts

Geometry of Real Inner Product Spaces Third Edition

Benz, W.

2012, XVIII, 310 p., Hardcover

ISBN: 978-3-0348-0419-6

A product of Birkhäuser Basel
