

Contents

1	Quantum Chromodynamics and Chiral Symmetry	1
1.1	Some Remarks on $SU(3)$	1
1.2	Local Symmetries and the QCD Lagrangian	4
1.2.1	The QED Lagrangian	5
1.2.2	The QCD Lagrangian	6
1.3	Accidental, Global Symmetries of the QCD Lagrangian.	9
1.3.1	Light and Heavy Quarks	9
1.3.2	Left-Handed and Right-Handed Quark Fields	10
1.3.3	Noether Theorem	13
1.3.4	Global Symmetry Currents of the Light-Quark Sector	22
1.3.5	The Chiral Algebra	24
1.3.6	Chiral Symmetry Breaking by the Quark Masses	25
1.4	Green Functions and Ward Identities	28
1.4.1	Ward Identities Resulting from $U(1)$ Invariance: An Example	29
1.4.2	Chiral Green Functions	36
1.4.3	The Algebra of Currents	38
1.4.4	QCD in the Presence of External Fields and the Generating Functional	40
1.4.5	PCAC in the Presence of an External Electromagnetic Field	46
	References	47
2	Spontaneous Symmetry Breaking and the Goldstone Theorem.	49
2.1	Degenerate Ground States.	49
2.2	Spontaneous Breakdown of a Global, Continuous, Non-Abelian Symmetry	54
2.3	Goldstone Theorem	59
2.4	Explicit Symmetry Breaking: A First Look.	63
	References	64

3	Chiral Perturbation Theory for Mesons	65
3.1	Effective Field Theory	65
3.2	Spontaneous Symmetry Breaking in QCD	69
3.2.1	The Hadron Spectrum	69
3.2.2	The Scalar Singlet Quark Condensate	72
3.3	Transformation Properties of the Goldstone Bosons	76
3.3.1	General Considerations	76
3.3.2	Application to QCD	79
3.4	Effective Lagrangian and Power-Counting Scheme	82
3.4.1	The Lowest-Order Effective Lagrangian	82
3.4.2	Symmetry Breaking by the Quark Masses	86
3.4.3	Construction of the Effective Lagrangian	90
3.4.4	Application at Lowest Order: Pion Decay	96
3.4.5	Application at Lowest Order: Pion-Pion Scattering	100
3.4.6	Application at Lowest Order: Compton Scattering	104
3.4.7	Dimensional Regularization	105
3.4.8	The Generation of Counter Terms	115
3.4.9	Power-Counting Scheme	117
3.5	Beyond Leading Order	120
3.5.1	The $\mathcal{O}(q^4)$ Lagrangian of Gasser and Leutwyler	121
3.5.2	Masses of the Goldstone Bosons at $\mathcal{O}(q^4)$	123
3.5.3	The Effective Wess-Zumino-Witten Action	133
3.5.4	Chiral Perturbation Theory at $\mathcal{O}(q^6)$	138
	References	142
4	Chiral Perturbation Theory for Baryons	145
4.1	Transformation Properties of the Fields	146
4.2	Baryonic Effective Lagrangian at Lowest Order	149
4.3	Applications at Lowest Order	155
4.3.1	Goldberger-Treiman Relation and the Axial-Vector Current Matrix Element	155
4.3.2	Pion-Nucleon Scattering	160
4.4	The Next-to-Leading-Order Lagrangian	169
4.5	Loop Diagrams: Renormalization and Power Counting	171
4.5.1	Counter Terms of the Baryonic ChPT Lagrangian	172
4.5.2	Power Counting	173
4.5.3	One-Loop Correction to the Nucleon Mass	174
4.6	Renormalization Schemes	179
4.6.1	Heavy-Baryon Approach	180
4.6.2	Infrared Regularization	185
4.6.3	Extended On-Mass-Shell Scheme	192
4.6.4	Dimensional Counting Analysis	198

4.7	The Delta Resonance	200
4.7.1	The Free Lagrangian of a Spin-3/2 System	201
4.7.2	Isospin.	204
4.7.3	Leading-Order Lagrangian of the $\Delta(1232)$ Resonance	207
4.7.4	Consistent Interactions.	209
	References	213
5	Applications and Outlook	215
5.1	Nucleon Mass and Sigma Term.	215
5.1.1	Nucleon Mass to $\mathcal{O}(q^3)$ in the Heavy-Baryon Formalism	215
5.1.2	Nucleon Mass and Sigma Term at $\mathcal{O}(q^4)$	218
5.1.3	Nucleon Mass Including the Delta Resonance	224
5.1.4	Nucleon Mass to $\mathcal{O}(q^6)$	227
5.2	Nucleon Electromagnetic Form Factors to $\mathcal{O}(q^4)$	230
5.3	Advanced Applications and Outlook	239
5.3.1	Chiral Extrapolations.	239
5.3.2	Pion Photo- and Electroproduction	239
5.3.3	Compton Scattering and Polarizabilities.	240
5.3.4	Virtual Compton Scattering	241
5.3.5	Isospin-Symmetry Breaking	242
5.3.6	Three-Flavor Calculations	242
5.3.7	Chiral Unitary Approaches.	243
5.3.8	Complex-Mass Scheme	243
5.3.9	Chiral Effective Theory for Two- and Few-Nucleon Systems	244
