

Contents

1	Fermion Fields and Their Properties	1
1.1	Lorentz Group and $SL(2, \mathbb{C})$	1
1.1.1	Lorentz Transformations	2
1.1.2	The Relation Between L^\uparrow_+ and the Special Linear Group in Two Complex Dimensions	9
1.2	Spinor Representations and Spinor Fields, “Dotted” and “Undotted” Spinors	14
1.3	Dirac Equation for Free Particles	21
1.4	Plane Wave Solutions of the Dirac Equation	27
1.5	A Few More Properties of Dirac Spinors	30
1.6	Quantization of Majorana Fields	33
1.7	Quantization of Dirac Field	36
1.8	Lagrange Density of Dirac Field, Charge, Energy, Momentum and Spin of Dirac Particles	40
1.8.1	Charge of Particles and Antiparticles	41
1.8.2	Energy and Momentum	43
1.8.3	Spin Properties of Dirac Particles	45
1.8.4	Dirac and Majorana Mass Terms	55
1.8.5	Neutrino Masses: The Seesaw Mechanism	60
1.9	Charged Fermion Fields in Interaction with Electromagnetic Fields	61
1.9.1	External Field Case	61
1.9.2	Interaction with the Quantized Maxwell Field	63
1.9.3	Some Remarks on These Results	67
1.10	Global Symmetries and Fermion Fields	69
1.10.1	Fermions in Representations of Non-Abelian Groups	70
1.10.2	*Charge Conjugation for Fermionic Multiplets	73
	References	75
	Exercises	76

2	Electromagnetic Processes and Interactions	79
2.1	Electron Scattering from a Composite Target: Qualitative Considerations	79
2.2	Elastic Scattering from a Spin Zero Target, Born Approximation	84
2.3	A Few Properties of Form Factor and Cross Section	88
2.4	Elastic Scattering from Nucleons	91
2.4.1	Current Matrix Elements and Form Factors	91
2.4.2	Derivation of Cross Section	95
2.4.3	Properties of Form Factors	99
2.4.4	Isospin Analysis of Nucleon Form Factors	101
2.5	*Elastic and Inelastic Electron Scattering from Nuclei	104
2.5.1	Multipole Fields	106
2.5.2	Theory of Electron Scattering	110
2.5.3	Born Approximation	112
2.5.4	The Problem of Coulomb Distortion	118
2.5.5	Partial Wave Analysis for Elastic Scattering	121
2.5.6	Practical Analysis of Scattering Data and Information Content of Partial Waves	127
2.5.7	Miscellaneous Comments	132
2.6	Muonic Atoms – Introduction	135
2.6.1	Properties of Free Muons	135
2.6.2	Muonic Atoms, Qualitative Discussion	137
2.6.3	Dirac Bound States in a Central Field	144
2.7	Muonic Atoms and Quantum Electrodynamics	154
2.7.1	Observable Part of Vacuum Polarization to Order $O(\alpha)$	156
2.7.2	Illustration and Interpretation of Vacuum Polarization of Order $\alpha Z\alpha$	160
2.7.3	Radiative Corrections in Muonic Atoms	163
2.8	Deep Inelastic Scattering	166
2.8.1	Inclusive Electron Scattering	166
2.8.2	Covariant Decomposition of $W^{\mu\nu}$ and Cross Section	170
2.8.3	An Example: Elastic Scattering from the Proton	172
2.8.4	Counting Quark Generations	175
2.8.5	Deep Inelastic Scattering and Parton Structure of Nucleons	175
	References	179
	Exercises	180
3	Weak Interactions and the Standard Model of Strong and Electroweak Interactions	183
3.1	Phenomenological Aspects of Weak Interactions	184
3.1.1	Basic Properties of Leptons and Quarks	185
3.1.2	Empirical Information on Weak Interactions	190

3.2	*Vector and Axial-Vector Covariants: Effective Lagrangians with V and A Couplings	202
3.2.1	Vectors and Axial Vectors	203
3.2.2	Effective Vector (V) and Axial-Vector (A) Interactions	207
3.2.3	Charged Current and Neutral Current V and A Interactions Due to Exchange of Heavy Vector Bosons	210
3.2.4	Difficulties of the Effective Current-Current Theory	214
3.3	Elements of Local Gauge Theories Based on Non-Abelian Groups	217
3.3.1	Groups of Local Gauge Transformations	218
3.3.2	Vector Potentials and Their Transformation Properties	222
3.3.3	Covariant Derivatives	226
3.3.4	Field Tensor for Vector Potentials	227
3.3.5	How to Construct Locally Gauge Invariant Theories	229
3.4	Glashow–Salam–Weinberg Model for Leptons and Quarks	232
3.4.1	GSW Lagrangian for One Lepton Family	233
3.4.2	GSW Lagrangian for the Quark Families	237
3.4.3	Spontaneous Symmetry Breaking	242
3.4.4	Summary of CC and NC Interactions in the GSW Theory	250
3.4.5	The Higgs Sector of the GSW Model	252
3.4.6	Note on Quark Masses and CKM Mixing	255
3.4.7	A Comment About Fermion Multiplets in a Unified Gauge Theory of Electroweak Interactions	257
3.5	Quantum Chromodynamics	259
3.5.1	Construction of the Lagrangian	259
3.5.2	Discussion of QCD Lagrangian	263
3.6	Simple Applications of the GSW Model at Energies Below the Vector Boson Masses	266
3.6.1	Scattering of Longitudinally Polarized Electrons from a Nucleus with Spin Zero	266
3.6.2	Neutrino and Antineutrino Scattering on Electrons	270
3.6.3	Angular Asymmetry in $e^+e^- \rightarrow \mu^+\mu^-$ and $e^+e^- \rightarrow \tau^+\tau^-$	275
3.7	Electroweak Physics at the Z Pole	280
3.7.1	Cross Sections Near the Z^0 Resonance	280
3.7.2	Forward-Backward Asymmetries and Polarizations	284
3.7.3	Precision Tests of Electroweak Interactions	287
	References	290
	Exercises	291

4	Beyond the Minimal Standard Model	293
4.1	Leptonic Charged and Neutral Current Interactions	293
4.1.1	Effective SPVAT Interactions	294
4.1.2	Precision Tests in Muon Decay	305
4.1.3	Neutral Currents in Muonic Atoms	320
4.2	Hadronic Charged Current Interactions	324
4.2.1	Semileptonic Interactions, Structure of Hadronic Charged Current	324
4.2.2	Pion Beta Decay and Conserved Vector Current (CVC)	326
4.2.3	The Strangeness-Conserving Axial Current	330
4.2.4	CVC and PCAC as Applied to Nucleonic Currents	334
4.2.5	Another Example: Pion Radiative Decay	338
4.3	New Perspectives and Open Problems	348
4.3.1	“Heavy” Neutrinos	350
4.3.2	Neutrino Oscillations	357
4.3.3	Processes Which Change Lepton Family Numbers	369
	References	374
	Exercises	374
A	Lorentz Invariant Distributions	377
B	S-Matrix, Cross Sections, Decay Probabilities	379
C1	Some Feynman Rules for Quantum Electrodynamics of Spin-1/2 Particles f^\pm	383
C2	Traces	385
D	The Group SU(3)	387
E	Dirac Equation with Central Fields	391
	Books, Monographs and General Reviews of Data	395
	Exercises: Further Hints and Selected Solutions	397
	Index	415
	About the Author	421

Electroweak and Strong Interactions
Phenomenology, Concepts, Models

Scheck, F.

2012, XX, 424 p., Hardcover

ISBN: 978-3-642-20240-7
