Part I Ion Beam Therapy in Perspective

1	From X-rays to Ion Beams: A Short History of Radiation Therapy	3
	James M. Slater	
1.1	Introduction	3
1.1.1	The Discovery Era	4
1.1.2	The Orthovoltage Era	6
1.1.3	Megavoltage Era	6
1.1.4	The Era of Ion Beams	8
1.2	Perspective	12
	References	14
2	The Place of Ion Beams in Clinical Applications	17
	Paul J. Kim and Helen A. Shih	
2.1	The Role of Proton Therapy	17
2.1.1	Ablative Intent with Single and Hypofractionated Therapy	17
2.1.2	Organ Preservation	19
2.1.3	Dose Escalation Around Critical Structures with Highly Fractionated Treatment	20
2.1.4	Reduction in Morbidity and Secondary Malignancies	23
2.1.5	Investigational	23
2.2	Carbon Ion Radiotherapy	26
2.3	Conclusion	26
	References	27
3	Socio-Economic Aspects of Ion Beam Therapy	31
	Andre Konski	
3.1	Introduction	31
3.2	Facility Development Cost	33

3.3	Cost-Effectiveness of IBT	35
3.4	Clinical Trials Prior to Adopting IBT	39
	References	40

Part II Physical and Biological Aspects

4	Physical and Biological Rationale for Using Ions in Therapy	45
	Ute Linz	
4.1	Introduction	45
4.2	Physical Properties	46
	4.2.1 Interaction of Photons and Ions with Matter	46
	4.2.2 Magnetic Deflection for Active Beam Shaping	48
4.3	Biophysical Properties	50
	4.3.1 Stopping Power and LET	50
4.4	Biological Properties	52
	4.4.1 Relative Biological Effectiveness	52
	4.4.2 Oxygen Enhancement Ratio	53
	4.4.3 Variation in Radiosensitivity with the Cell Cycle	54
	4.4.4 Sublethal Cell Damage	55
4.5	Comparison of Protons and Heavier Ions	55
	References	57
5	Early and Late Responses to Ion Irradiation	61
	Reinhard Schulte and Ted Ling	
5.1	Basic Concepts	61
	5.1.1 Definition of Early and Late Tissue Responses	61
	5.1.2 Cellular and Molecular Origin of Radiation Response	62
	5.1.3 Dose–Volume Effects	63
	5.1.4 Biological Dose Weighting	65
5.2	Early and Late Tissue Responses to Proton and Ion Irradiation	67
	5.2.1 Early Normal Tissue Responses	68
	5.2.2 Late Normal Tissue Responses	71
	References	76
6	The Impact of Radiation Quality on Cure Rate	81
	John Gueulette, Reinhard Gahbauer, Dan Jones, Jacobus Slabbert, and André Wambersie	
6.1	Physical Selectivity and Radiation Quality	81
6.2	From Absorbed Dose to Radiobiological Effects	83
6.3	RBE for the Different Radiation Qualities Used in Therapy	85
6.4	Criteria for Patient Selection for High-LET Radiation Therapy	88

6.5	Quality Assurance	89
6.6	Conclusions	92
	References	92

Part III Models and Preclinical Studies

7	Monte Carlo Methods for Dose Calculations	97
	Katia Parodi	
7.1	Introduction	97
7.2	MC Codes for IBT	98
7.3	The Roadmap for MC Dose Calculations in IBT.....	101
	7.3.1 Modeling of the Beam Delivery System	101
	7.3.2 Dose Calculations in Phantoms	104
	7.3.3 Dose Calculations in the Patient CT	106
7.4	Biological Dose Calculations.....	110
7.5	Conclusion	112
	References	113
8	Modeling Heavy Ion Radiation Effects.....	117
	Thilo Elsässer	
8.1	Introduction	117
8.2	Amorphous Track Models	118
8.3	Early Approaches by Katz and Coworkers	119
8.4	Microdosimetric Kinetic Model	120
8.5	Local Effect Model	122
	8.5.1 Original Local Effect Model	122
	8.5.2 LEM II.....	124
	8.5.3 LEM III.....	125
	8.5.4 Generalization of LEM (LEM IV)	125
	8.5.5 Comparison to Experimental In Vitro Cell Survival Data	126
8.6	Applying the Models to Complex Radiation Fields	127
8.7	Comparison of LEM, MKM, and Katz Approach.....	129
8.8	Application in Treatment Planning for Heavy Ions	129
8.9	Conclusions and Future Directions	131
	References	132
9	Preclinical Radiobiology and Predictive Assays	135
	Eleanor A. Blakely and Polly Y. Chang	
9.1	Introduction	135
9.2	Measurements of the Relative Biological Effectiveness	136
9.3	Spatial Mapping of RBE	137
9.4	RBE–LET Relation for Normal and Malignant Tissues	138

9.5	Additional Variables in Measuring RBE	139
9.5.1	Different Doses and Dose Fractionation Regimes	139
9.5.2	Differences in Biological Geometry Relative to the Beam Exposure.....	140
9.5.3	Differences in Cell Cycle Status	140
9.5.4	Differences in Individual Radiosensitivity	141
9.5.5	Differences Between Species.....	141
9.5.6	Differences in the Gender of the Organism.....	141
9.6	Conclusions	142
	References	143

Part IV Clinical Results and Indications

10	Ocular Proton Therapy Centers	149
	Andrzej Kacperek	
10.1	Introduction	149
10.2	Principal Constituents of a PT Facility	152
10.2.1	Proton Accelerators	152
10.2.2	Proton Beam Characteristics	154
10.2.3	Beam-modifying Devices	154
10.2.4	Patient Treatment Chair and Mask	159
10.2.5	Patient Positioning, X-Ray Verification Systems and Markers	162
10.3	Radiation Protection	164
10.4	Treatment Doses, Fractionation, and RBE.....	165
10.5	Ocular PT-planning Systems	167
10.6	Quality-assurance Methodology	170
10.6.1	In-Beam Dose Monitoring.....	170
10.6.2	Daily Beam and Dosimetry Checks for Treatment.....	170
10.6.3	Pretreatment Checks	171
10.6.4	Reference and Absolute Dosimetry Procedures	171
10.6.5	Characterization of the Treatment Beam	171
10.6.6	In Vivo Dosimetry	172
10.7	Discussion	172
10.8	Conclusion	174
	References	175
11	Clinical Indications for Carbon Ion Radiotherapy and Radiation Therapy with Other Heavier Ions	179
	Stephanie E. Combs	
11.1	Introduction	179
11.2	Skull Base Tumors	180
11.3	Brain Tumors.....	180
11.4	Hepatocellular Carcinoma	182

11.5	Prostate Cancer.....	184
11.6	Recurrent Rectal Cancer.....	184
11.7	Lung Cancer.....	185
11.8	Head and Neck Tumors.....	186
11.9	Soft-Tissue and Bone Sarcomas.....	186
11.10	Gynecological Malignancies.....	187
11.11	Conclusion.....	187
