1	Introduction and Zeroth Law	1
1.1	Some Definitions	1
1.1.1	A Thermodynamic System	1
1.1.2	Adiabatic Enclosure	2
1.1.3	Adiabatically Isolated System	2
1.1.4	Adiabatically Enclosed System	2
1.1.5	Conducting Walls	2
1.1.6	Diathermal Walls	2
1.1.7	Isobaric Process	3
1.1.8	Isochoric Process	3
1.1.9	Thermal Equilibrium	3
1.1.10	Quasi-Static Process	3
1.1.11	Reversible and Irreversible Processes	4
1.2	Thermodynamics: Large Numbers	4
1.2.1	Remark: Most Probable State	4
1.3	Zeroth Law of Thermodynamics	4
1.3.1	Empirical Temperature	5
1.3.2	Taking Stock	7
1.3.3	Isothermal Process	8
1.3.4	Equation of State	8
1.3.5	Remark	8
1.4	Useful, Simple Mathematical Procedures	8
1.5	Exact Differential	9
1.5.1	Exercise I-a	9
1.5.2	Notation	11
1.5.3	Exercise I-b	13
1.5.4	Inexact Differential	13
1.5.5	State Function and State Variables	14
1.5.6	Cyclic Identity	14
1.5.7	Exercise II-a	16

1.6	Jacobians: A Simple Technique	16
1.6.1	Exercise II-b	17
1.6.2	Jacobian Employed	18
1.7	Useful Identities.....	19
1.7.1	Cyclic Identity: Re-Derived.....	19
1.7.2	Simple Identity	20
1.7.3	Mixed Identity	20
2	Perfect Gas	23
2.1	Model of a Perfect Gas	23
2.1.1	Pressure	24
2.2	Temperature: A Statistical Approach	26
2.2.1	Boltzmann–Maxwell–Gibbs Distribution: Perfect Gas with Classical Statistics.....	26
2.2.2	Energy in the Perfect Gas	28
2.3	Equation of State.....	30
2.4	Intensive and Extensive Properties	30
2.4.1	Extensive	30
2.4.2	Intensive	31
2.5	Temperature: Thermodynamic Approach.....	31
2.5.1	Attainment of Thermodynamic Equilibrium by a Perfect Gas	33
2.6	Diatoms.....	34
2.6.1	Monatomic and Diatomic Perfect Gases	34
2.7	Mixture of Perfect Gases: Temperature and Pressure	35
2.7.1	Dalton’s Law of Partial Pressures.....	36
2.8	Perfect Gas Atmosphere	38
2.8.1	The Barometric Equation for Isothermal Atmosphere	38
2.8.2	A Related Calculation	40
2.8.3	Height Below Which a Specified Percentage of Molecules are Found	41
2.8.4	Energy of Isothermal Atmosphere	42
2.8.5	Barometric Equation for Atmosphere with Height Dependent Temperature	44
2.9	Perfect Gas of Extremely Relativistic Particles	46
2.10	Examples I–VII	47
2.10.1	I: Partial Pressure of Mixtures	47
2.10.2	II: Dissociating Tri-Atomic Ozone	48
2.10.3	III: Energy Change in Leaky Container	49
2.10.4	IV: Mixture of Carbon and Oxygen	50
2.10.5	V : Carbon on Burning	51
2.10.6	VI : Pressure, Volume and Temperature	52
2.10.7	VII: Addition to Example VI	53

2.11	Exercises	55
2.11.1	I: Where 90% Molecules Are Found in Atmosphere with Decreasing Temperature.....	55
2.11.2	II: Total Energy of a Column in Atmosphere with Decreasing Temperature.....	55
3	The First Law	57
3.1	Heat Energy, Work and Internal Energy	58
3.1.1	Caloric Theory of Heat.....	58
3.1.2	Later Ideas	58
3.1.3	Perpetual Machines of the First Kind.....	62
3.2	Specific Heat Energy	63
3.3	Notation	63
3.4	Some Applications	64
3.4.1	t and v Independent	65
3.5	Examples	68
3.5.1	I: Heat Energy Needed for Raising Temperature	68
3.5.2	II: Work Done and Increase in Internal Energy Due to Changes in Pressure, Volume, and Temperature	69
3.5.3	III: Work Done by Expanding Van der Waals Gas	71
3.5.4	IV: Metal Versus Gas: Work Done and Volume Change	72
3.5.5	V: Equation of State: Given Pressure and Temperature Change.....	73
3.5.6	VI: Spreading Gas: among Three Compartments.....	74
3.6	t and p Independent	77
3.7	p and v Independent	80
3.8	Enthalpy	81
3.8.1	Enthalpy: State Function	82
3.8.2	Enthalpy and the First Law	83
3.9	Examples	85
3.9.1	VII: Prove $c_p - c_v = -\Delta_p \left(\frac{\partial p}{\partial t} \right)_v$ $= \Delta_v \left(\frac{\partial v}{\partial t} \right)_p$	85
3.9.2	VIII: Internal Energy from Latent Heat Energy of Vaporization.....	86
3.10	Hess' Rules for Chemo-Thermal Reactions	88
3.11	Examples	89
3.11.1	IX-Oxidation of CO to CO ₂	89
3.11.2	X: Latent Heat of Vaporization of Water	90
3.12	Adiabatics for the Ideal Gas	91
3.12.1	XI: Work Done in Adiabatic Expansion and Isothermal Compression of Ideal Gas	93

3.12.2	XII: Non-Quasi-Static free Adiabatic Expansion of Ideal Gas.....	95
3.12.3	XIII: Quasi-Static Adiabatic Compression of Ideal Gas	96
3.12.4	XIV: Isobaric, Isothermal, or Adiabatic Expansion of Diatomic Ideal Gas.....	96
3.12.5	XV: Conducting and Non-Conducting Cylinders in Contact.....	98
3.13	Ideal Gas Polytropics	99
3.14	Examples XVI–XXI: Some Inter-Relationships	101
3.14.1	XVI: Alternate Proof of $c_v \left(\frac{\partial t}{\partial v} \right)_u = - \left(\frac{\partial u}{\partial v} \right)_t$	101
3.14.2	XVII: Show that $c_v \left(\frac{\partial t}{\partial p} \right)_v = \left(\frac{\partial u}{\partial p} \right)_v$	101
3.14.3	XVIII: Show that $c_p \left(\frac{\partial t}{\partial v} \right)_p = \left(\frac{\partial h}{\partial v} \right)_p$	102
3.14.4	XIX: Show that $c_p = \left(\frac{\partial u}{\partial t} \right)_p + pv\alpha_p$	102
3.14.5	XX: Show that $\left(\frac{\partial h}{\partial t} \right)_v = c_v + v \left(\frac{\alpha_p}{\chi_t} \right)$	102
3.14.6	XXI: Show that $\left(\frac{\gamma}{v\chi_t} \right) = \left(\frac{\partial h}{\partial v} \right)_p \left(\frac{\partial p}{\partial u} \right)_v$	103
3.15	Construction of Equation of State from the Bulk and Elastic Moduli: Examples XXII–XXXI.....	103
3.15.1	XXII: χ_t and α_p and Equation of State.....	104
3.15.2	XXIII: Alternate Solution for Example XXII	106
3.15.3	XXIV.....	108
3.15.4	XXV.....	109
3.15.5	XXVI: Alternate Solution of XXV	111
3.15.6	XXVII.....	112
3.15.7	XXVIII.....	114
3.15.8	XXIX : Alternate Solution of XXVIII.....	116
3.15.9	XXX.....	117
3.15.10	XXXI: Equation of State for Constant χ and α	119
3.16	Newton’s Law of Cooling	120
3.16.1	XXXII: Related to Newton’s Law of Cooling	121
3.17	Internal Energy in Non-Interacting Monatomic Gases is $= \frac{3}{2} P V$	122
3.17.1	XXXIII: The Volume Dependence of Single Particle Energy Levels.....	122
4	The Second Law	125
4.1	Heat Engines: Introductory Remarks	126
4.1.1	Non-Existence of Perpetual Machines of the Second Kind	126
4.2	A Perfect Carnot Engine.....	128
4.2.1	Ideal Gas Carnot Engine	128

4.3	Kelvin's Description of the Absolute Temperature Scale	131
4.3.1	Efficiency of a Perfect Carnot Engine	132
4.3.2	Ideal Gas Carnot Engine: Revisited	133
4.4	Carnot Version of the Second Law	135
4.4.1	Exercise I: Work Along the Two Adiabatic Legs	135
4.5	Entropy	136
4.5.1	Infinitesimal Carnot Cycles	136
4.5.2	Even If the Entropy Change Occurs Via Irreversible Processes, One Can Use Reversible Paths For Its Computation	138
4.5.3	Perfect Carnot Engine with Arbitrary Working Substance	139
4.6	Statements of the Second Law	141
4.6.1	The Carnot Statement	141
4.6.2	The Clausius Statement	142
4.6.3	Second Law: Carnot Version Leads to the Clausius Version	142
4.7	Entropy Increase in Spontaneous Processes	142
4.8	Kelvin–Planck: The Second Law	145
4.8.1	Kelvin–Planck: Entropy Always Increases in Irreversible-Adiabatic Processes	146
4.9	Non-Carnot Heat Cycle Clausius Inequality: The Integral Form	148
4.9.1	Clausius Inequality: The Differential Form	150
4.9.2	Heat Transfer Always Increases Total Entropy	151
4.9.3	First-Second Law: The Clausius Version	152
4.10	Entropy Change and Thermal Contact: Examples I–III	153
4.10.1	I: An Object and a Reservoir	153
4.10.2	II: Two Finite Masses: Entropy Change	155
4.10.3	III: Reservoir and Mass with Temperature- Dependent Specific Heat	157
4.11	Carnot Cycles: Entropy and Work. Examples IV–XVI	159
4.11.1	IV: Changes Along Carnot Paths	159
4.11.2	V: An Object and a Reservoir	161
4.11.3	VI: Alternate Solution for V	163
4.11.4	VII: Maximum Work Done and Change in Entropy	167
4.11.5	VIII: Between Two Finite Masses	168
4.11.6	IX: Alternate Solution for VIII	169
4.11.7	X: Between Three Finite Masses	171
4.11.8	XI: Alternate Solution for X	172
4.11.9	Exercise II: Re-Do XI for n Objects	174
4.11.10	XII: Carnot Engine and Three Reservoirs	174
4.11.11	XIII: Alternate Solution for XII	176
4.11.12	XIV: Two Masses and Reservoir	178

4.11.13	XV: Alternate Solution for XIV	179
4.11.14	XVI: Carnot Engine Operating Between Two Finite Sources with Temperature Dependent Specific Heat	183
4.12	Carnot Refrigerators and Air-Conditioners	185
4.12.1	XVII: Work Needed For Cooling an Object with Constant Specific Heat	187
4.12.2	XVIII: Cooling with Temperature Dependent Specific Heat: Entropy Change and Work Input	188
4.13	Carnot Heat Energy Pump	190
4.13.1	Exercise III	192
4.13.2	XIX: Entropy Increase on Removing Temperature Gradient	192
4.13.3	XX: Maximum Work Available in XIX	195
4.13.4	Exercise IV	197
4.14	Ideal Gas Stirling Cycle	197
4.15	Idealized Version of Some Realistic Engines	199
4.16	The Diesel Cycle	199
4.16.1	XXI: Diesel Engine	201
4.17	Ideal Gas Otto Cycle	202
4.18	Ideal Gas Joule Cycle	206
4.18.1	XXII: Joule Engine	208
4.19	Negative Temperature: Cursory Remark	209
5	First and Second Laws Combined	211
5.1	First and Second Laws	212
5.1.1	The Clausius Version: Differential Form	212
5.2	t and v Independent	213
5.2.1	Proof of Relationship: $\left(\frac{\partial u}{\partial v}\right)_t = t \left(\frac{\partial p}{\partial t}\right)_v - p$	214
5.3	First $T.dS$ Equation	215
5.3.1	Dependence of C_v on v	217
5.3.2	Alternate Proof: $\left(\frac{\partial u}{\partial v}\right)_t = t \left(\frac{\partial p}{\partial t}\right)_v - p$	218
5.4	Mixing of Ideal Gas: Examples I–IV	219
5.4.1	I: Isothermal, Different Pressures, Same Number of Atoms	219
5.4.2	II: Isothermal, Different Pressures, Different Number of Atoms	222
5.4.3	III: Different Pressure, Different Temperature, and Different Number of Atoms	225
5.4.4	IV: If $\left(\frac{p}{t}\right) = \left(\frac{\alpha_p}{\chi_t}\right)$ then $\left(\frac{\partial C_v}{\partial v}\right)_t = 0$	228
5.5	t and p Independent	230
5.5.1	Prove Equation: $\left(\frac{\partial h}{\partial p}\right)_t - v = -t \left(\frac{\partial v}{\partial t}\right)_p$	230

5.6	Second $T.dS$ Equation	231
5.6.1	Dependence of C_p on p	232
5.6.2	Alternate Proof: $\left(\frac{\partial h}{\partial p}\right)_t - v = -t \left(\frac{\partial v}{\partial t}\right)_p$	233
5.7	First and Second $T.dS$ Together	234
5.8	p and v Independent	235
5.9	Third $T.dS$ Equation	236
5.9.1	Isentropic Processes	236
5.10	Velocity of Sound: Newton's Treatment	237
5.11	Examples	238
5.11.1	V: Gas in Contact with Reservoir: Change in u and s	238
5.12	Examples VI–XV	239
5.12.1	VI: $\Delta W, \Delta U, \Delta S$ for $P = (a/2b)T^2 + (1/bV)$	239
5.12.2	VII: $\Delta W, \Delta U, \Delta S$ for $p v = R t (1 + b_2/v + b_3/v^2$ $+ \dots + b_n/v^{n+1})$	240
5.12.3	VIII: Show $\left(\frac{\chi_t}{\chi_s}\right) = 1 - \left(\frac{\alpha_p}{\alpha_s}\right)$	241
5.12.4	IX: Show $C_p \left(\frac{\partial t}{\partial s}\right)_h = t - \alpha_p t^2$	242
5.12.5	X: Show $\left(\frac{v}{C_p}\right) = \left(\frac{\partial t}{\partial p}\right)_s - \left(\frac{\partial t}{\partial p}\right)_h$	243
5.12.6	XI: Isothermally Stretched Ideal Rubber	244

10.4.7	Specific Helmholtz Free Energy is Equal for Different Phases	383

10.5	Gibb's Free Energy	384
10.5.1	Maximum Available Work: Isothermal– Isobaric Change of State	385
10.5.2	Decrease in Gibbs Free Energy at Constant Mole-Numbers and Constant \mathcal{X}	386
10.5.3	Extremum Principle for Gibbs Free Energy	387
10.5.4	Relative Size of Phases and Gibbs Potential Minimum	387
10.5.5	Equality of Specific Gibbs Free Energy of Different Phases	388
10.6	The Enthalpy: Remarks	389
10.6.1	Heat of Transformation	390
10.7	Thermodynamic Potentials: s , f , g and h	391
10.7.1	Characteristic Equations	392
10.7.2	Helmholtz Potential Helps Determine Internal Energy	392
10.7.3	Gibbs Potential Helps Determine Enthalpy	393
10.8	The Maxwell Relations	393
10.8.1	Exercises	395
10.9	Meta-Stable Equilibrium	395
10.10	The Clausius–Clapeyron Differential Equation	396
10.10.1	Solving Clausius–Clapeyron Differential Equation...	399
10.10.2	Triple and the Ice-Points of Water: Why the Separation?	400
10.11	Gibbs Phase Rule	402
10.11.1	Multi-Phase Multi-Constituent Systems	402
10.11.2	Phase Equilibrium Relationships	403
10.11.3	The Phase Rule	405
10.11.4	The Variance	405
10.11.5	Phase Rule for Systems with Chemical Reactions....	406
11	Statistical Thermodynamics: Third Law	409
11.1	Partition Function: Classical Systems in δ -Dimensions	410
11.1.1	The Canonical Ensemble	410
11.2	Non-Interacting Classical Systems: Monatomic Perfect Gas in Three-Dimensions	413
11.2.1	The Partition Function	413
11.2.2	Monatomic Perfect Gas: Thermodynamic Potentials	415
11.3	Monatomic Perfect Gases: Changes Due to Mixing	416
11.3.1	Example I: Isothermal Mixing of Ideal Gas: Different Pressures but Same Gas and Same Number of Atoms	416
11.3.2	Exercise I	417

11.3.3	II: Isothermal Mixing of Monatomic Ideal Gas: Different Pressures and Different Number of Atoms	417
11.3.4	Exercise II	419
11.3.5	III: Mixing of Ideal Gas with Different Temperature, Pressure, and Number of Atoms.....	419
11.3.6	Exercise III.....	420
11.4	Different Monatomic Ideal Gases Mixed	421
11.4.1	Thermodynamic Potentials.....	422
11.4.2	Gibbs Paradox	422
11.4.3	Exercise IV	423
11.5	Perfect Gas of Classical Diatoms	423
11.5.1	Free Interatomic Bond	423
11.5.2	Non-Interacting Atoms in Free Diatoms	424
11.5.3	Thermodynamics of N_d Free-Diatoms	424
11.5.4	Experimental Observation	425
11.5.5	Motion of and About Center of Mass	426
11.5.6	Translational Motion of Center of Mass.....	428
11.5.7	Motion About Center of Mass	429
11.5.8	Single Classical Diatom with Stiff Bond: Rotational Kinetic Energy	432
11.5.9	Statistical Thermodynamics of N_d Classical Diatoms with Stiff Bonds	434
11.5.10	Free Bonds	434
11.5.11	Remark	434
11.5.12	Characteristic Temperatures for Rotation and Vibration of Diatoms	436
11.5.13	Classical Diatoms: High Temperature	436
11.5.14	End of Stiffness: Bond Length Vibration.....	437

A.5.2	Normalized Moments of the Gaussian Distribution Function	581
A.5.3	Normalized Moments of the Exact Distribution Function for General Occupancy	582
A.5.4	Exact, Second Normalized Moment	583
A.5.5	Exact, Third \rightarrow Sixth Normalized Moments	584
A.5.6	Exercise: III	585
A.5.7	The Fourth Moment	585
A.5.8	Calculation of the Fifth and the Sixth Normalized Moments	586
A.5.9	Concluding Remark	588
A.5.10	Summary	589
B	Perfect Gas Revisited	591
B.1	Monatomic Perfect Gas	591
B.1.1	Pressure	591
B.1.2	Classical Statistics: Boltzmann–Maxwell– Gibbs Distribution	595
B.1.3	Energy in a Monatomic Perfect Gas	597
C	Second Law: Carnot Version Leads to Clausius Version	601
C.1	A Carnot and an Ordinary Engine in Tandem	601
D	Positivity of the Entropy Increase: (4.73)	605
D.1	Analysis	605
E	Mixture of Van der Waals Gases	609
E.1	Analysis	609

F	Positive-Definite Homogeneous Quadratic Form	615
F.1	Analysis	615
F.2	Positive Definiteness of 3×3 Quadratic Form	616
F.2.1	A Helpful Surprise	617
G	Thermodynamic Stability: Three Variables	619
G.1	Energy Minimum Procedure: Intrinsic Stability	620
G.1.1	Third Requirement for Intrinsic Stability	622
G.2	Examples	623
G.2.1	Example I	623
G.2.2	Example II	625
H	Massieu Transforms: The Entropy Representation	627
H.1	Massieu Potential: $M\{v, u\}$	627
H.1.1	Massieu Potential: $M\left\{v, \frac{1}{T}\right\}$	628
H.1.2	Remark	629
H.1.3	Massieu Potential: $M\left\{\frac{p}{T}, u\right\}$	629
H.1.4	Massieu Potential: $M\left\{\frac{p}{T}, \frac{1}{T}\right\}$	629
I	Integral (11.83)	631
I.0.5	Average Force Between a Pair	636
J	Indistinguishable, Non-Interacting Quantum Particles	637
J.1	Quantum Statistics: Grand Canonical Partition Function	638
K	Landau Diamagnetism	641
K.1	Analysis	641
K.1.1	Multiplicity Factor	642
L	Specific Heat for the BE Gas	647
L.1	Analysis	647
Index	649

General and Statistical Thermodynamics
