1	Introduction	1
	References	2
2	Fundamentals	5
2.1	NMR Methods	5
2.1.1	Notes on Quantum Mechanics	5
2.1.2	Nuclear Magnetic Resonance	7
2.1.3	Fourier Imaging	12
2.1.4	Contrast	22
2.1.5	Spectroscopy	23
2.1.6	Relaxometry	24
2.1.7	Diffusometry	27
2.1.8	Velocimetry	31
2.1.9	Relaxation for Flowing Liquids	41
2.2	Problems	46
2.3	Image Analysis	47
2.3.1	Thresholds, Porosity, Filters	48
2.3.2	Specific Surface	54
2.3.3	Segmentation and Frequency Distributions	59
2.3.4	Signal, Noise, and Variance	67
2.3.5	Phase Correction	71
	References	78
3	Hardware	83
3.1	Micro-Imaging System	83
3.2	Low-Field System	86
3.2.1	Properties of Magnet Materials	87
3.3	Design of Specific NMR Parts	88
3.3.1	Actively Screened Gradient Coils	88
3.3.2	Magnet Setup and Probes	91
3.4	Flow Loop	98
	References	100

4 Applications	103
4.1 Gas Filtration	103
4.1.1 Introduction	103
4.1.2 Results and Discussion	103
4.1.3 Conclusion	106
4.2 Solid-Liquid Separation	107
4.2.1 Introduction	107
4.2.2 Results and Discussion	108
4.2.3 Conclusion	110
4.3 Powder Mixing	111
4.3.1 Introduction	111
4.3.2 Results and Discussion	112
4.3.3 Conclusion	115
4.4 Rheometry	115
4.4.1 Introduction	115
4.4.2 Results and Discussion	116
4.4.3 Conclusion	122
4.5 Relaxometry for a Flowing Liquid	125
4.5.1 Introduction	125
4.5.2 Results and Discussion	125
4.5.3 Conclusion	128
4.6 Trickle-Bed Reactor	128
4.6.1 Introduction	128
4.6.2 Results and Discussion	129
4.6.3 Conclusion	134
4.7 Ceramic Sponges	135
4.7.1 Introduction	135
4.7.2 Results and Discussion	136
4.7.3 Conclusion	139
4.8 Biofilm	140
4.8.1 Introduction	140
4.8.2 Results and Discussion	140
4.8.3 Conclusion	143
4.9 Microwave Heating	144
4.9.1 Introduction	144
4.9.2 Results and Discussion	144
4.9.3 Conclusion	151
4.10 Emulsions	151
4.10.1 Introduction	151
4.10.2 Results and Discussion	152
4.10.3 Conclusion	156
4.11 Concluding Remarks	157
References	159

5 Solutions	165
5.1 Problems of Chapter 2	165
6 Source Code	169
6.1 specSurfOM	169
6.2 specSurfRec	172
6.3 Pore-Space Segmentation	173
6.4 Slice Selection	175
7 NMR Line Shape Parametrization	179
7.1 Assumptions	179
7.2 Lorentz Line Shape	179
7.3 Field Distribution	180
7.4 Convolution	181
7.5 Examples	182
7.6 Conclusion	183
8 Gradient Echoes	185
8.1 Echo Shifts	185
8.2 Rising Properties	189
8.3 Decay Properties	190
8.4 PGMC Sequence	191
8.4.1 Determination of the Effects	191
8.4.2 Compensation of the Effects	194
8.4.3 Simplified Model	195
8.4.4 Comparison of Both Models	196
8.5 Sequence with Storing Period	199
8.5.1 Determination of Permanent Gradients	201
8.5.2 Determination of Pulsed Gradients	201
Reference	202
9 Imaging with an Inhomogeneous Gradient	203
Reference	205
Index	207

NMR Methods for the Investigation of Structure and
Transport

Hardy, E.H.

2012, XVIII, 210 p., Hardcover

ISBN: 978-3-642-21627-5
