1	Introduction	1
1.1	Motivation	1
1.2	Structure of the Book	4
	References	8
2	Microstructure Foundations	9
2.1	The Institutional Framework of Trading	9
2.1.1	Types of Traders and Forms of Trading	9
2.1.2	Types of Orders	10
2.1.3	Market Structures	12
2.1.4	Order Precedence and Pricing Rules	14
2.1.5	Trading Forms at Selected International Exchanges	16
2.2	A Review of Market Microstructure Theory	19
2.2.1	Asymmetric Information Based Models	19
2.2.2	Inventory Models	21
2.2.3	Major Implications for Trading Variables	22
2.2.4	Models for Limit Order Book Markets	23
	References	24
3	Empirical Properties of High-Frequency Data	27
3.1	Handling High-Frequency Data	27
3.1.1	Databases and Trading Variables	27
3.1.2	Matching Trades and Quotes	30
3.1.3	Data Cleaning	32
3.1.4	Split-Transactions	34
3.1.5	Identification of Buyer- and Seller-Initiated Trades	34
3.2	Aggregation by Trading Events: Financial Durations	35
3.2.1	Trade and Order Arrival Durations	35
3.2.2	Price and Volume Durations	36
3.3	Properties of Financial Durations	37
3.4	Properties of Trading Characteristics	44
3.5	Properties of Time Aggregated Data	52

3.6	Summary of Major Empirical Findings	60
	References	67
4	Financial Point Processes	69
4.1	Basic Concepts of Point Processes	69
4.1.1	Fundamental Definitions	69
4.1.2	Compensators and Intensities	71
4.1.3	The Homogeneous Poisson Process	74
4.1.4	Generalizations of Poisson Processes	76
4.1.5	A Random Time Change Argument	77
4.1.6	Intensity-Based Inference	79
4.1.7	Simulation and Diagnostics	81
4.2	Four Ways to Model Point Processes	83
4.2.1	Intensity Models	83
4.2.2	Hazard Models	85
4.2.3	Duration Models	90
4.2.4	Count Data Models	90
4.3	Censoring and Time-Varying Covariates	91
4.3.1	Censoring	91
4.3.2	Time-Varying Covariates	92
4.4	An Outlook on Dynamic Extensions	94
	References	97
5	Univariate Multiplicative Error Models	99
5.1	ARMA Models for Log Variables	100
5.2	A MEM for Durations: The ACD Model	102
5.3	Estimation of the ACD Model	104
5.3.1	QML Estimation	104
5.3.2	ML Estimation	109
5.4	Seasonalities and Explanatory Variables	113
5.5	The Log-ACD Model	115
5.6	Testing the ACD Model	117
5.6.1	Portmanteau Tests	118
5.6.2	Independence Tests	120
5.6.3	Distribution Tests	123
5.6.4	Lagrange Multiplier Tests	127
5.6.5	Conditional Moment Tests	130
5.6.6	Monte Carlo Evidence	136
	References	139
6	Generalized Multiplicative Error Models	143
6.1	A Class of Augmented ACD Models	143
6.1.1	Special Cases	144
6.1.2	Theoretical Properties	148
6.1.3	Empirical Illustrations	149

6.2	Regime-Switching ACD Models	156
6.2.1	Threshold ACD Models	156
6.2.2	Smooth Transition ACD Models	158
6.2.3	Markov Switching ACD Models	161
6.3	Long Memory ACD Models	162
6.4	Mixture and Component Multiplicative Error Models	166
6.4.1	The Stochastic Conditional Duration Model	166
6.4.2	Stochastic Multiplicative Error Models	167
6.4.3	Component Multiplicative Error Models	169
6.5	Further Generalizations of Multiplicative Error Models	170
6.5.1	Competing Risks ACD Models	170
6.5.2	Semiparametric ACD Models	171
6.5.3	Stochastic Volatility Duration Models	172
	References	173
7	Vector Multiplicative Error Models	177
7.1	VMEM Processes	177
7.1.1	The Basic VMEM Specification	177
7.1.2	Statistical Inference	180
7.1.3	Applications	181
7.2	Stochastic Vector Multiplicative Error Models	184
7.2.1	Stochastic VMEM Processes	184
7.2.2	Simulation-Based Inference	186
7.2.3	Modelling Trading Processes	188
	References	193
8	Modelling High-Frequency Volatility	195
8.1	Intraday Quadratic Variation Measures	195
8.1.1	Maximum Likelihood Estimation	198
8.1.2	The Realized Kernel Estimator	199
8.1.3	The Pre-averaging Estimator	200
8.1.4	Empirical Evidence	202
8.1.5	Modelling and Forecasting Intraday Variances	205
8.2	Spot Variances and Jumps	210
8.3	Trade-Based Volatility Measures	213
8.4	Volatility Measurement Using Price Durations	216
8.5	Modelling Quote Volatility	220
	References	223
9	Estimating Market Liquidity	225
9.1	Simple Spread and Price Impact Measures	226
9.1.1	Spread Measures	226
9.1.2	Price Impact Measures	226
9.2	Volume Based Measures	228
9.2.1	The VNET Measure	228
9.2.2	Excess Volume Measures	230

9.3	Modelling Order Book Depth.....	235
9.3.1	A Cointegrated VAR Model for Quotes and Depth	236
9.3.2	A Dynamic Nelson–Siegel Type Order Book Model	237
9.3.3	A Semiparametric Dynamic Factor Model	239
	References	243
10	Semiparametric Dynamic Proportional Hazard Models	245
10.1	Dynamic Integrated Hazard Processes	246
10.2	The Semiparametric ACPH Model	248
10.3	Properties of the Semiparametric ACPH Model	250
10.3.1	Autocorrelation Structure	250
10.3.2	Estimation Quality	253
10.4	Extended SACPH Models	255
10.4.1	Regime-Switching Baseline Hazard Functions	255
10.4.2	Censoring	258
10.4.3	Unobserved Heterogeneity	259
10.5	Testing the SACPH Model	260
10.6	Estimating Volatility Using the SACPH Model.....	262
10.6.1	Data and the Generation of Price Events	263
10.6.2	Empirical Findings	266
	References	272
11	Univariate Dynamic Intensity Models	273
11.1	The Autoregressive Conditional Intensity Model.....	274
11.2	Generalized ACI Models.....	278
11.2.1	Long-Memory ACI Models	279
11.2.2	An AFT-Type ACI Model	279
11.2.3	A Component ACI Model.....	281
11.2.4	Empirical Application	282
11.3	Hawkes Processes	284
	References	289
12	Multivariate Dynamic Intensity Models	291
12.1	Multivariate ACI Models	291
12.2	Applications of Multivariate ACI Models.....	296
12.2.1	Estimating Simultaneous Buy/Sell Intensities	296
12.2.2	Modelling Order Aggressiveness	302
12.3	Multivariate Hawkes Processes	307
12.3.1	Statistical Properties	307
12.3.2	Estimating Multivariate Price Intensities	309
12.4	Stochastic Conditional Intensity Processes	312
12.4.1	Model Structure	312
12.4.2	Probabilistic Properties of the SCI Model	317
12.4.3	Statistical Inference.....	322
12.5	SCI Modelling of Multivariate Price Intensities	326
	References	330

13 Autoregressive Discrete Processes and Quote Dynamics	331
13.1 Univariate Dynamic Count Data Models.....	332
13.1.1 Autoregressive Conditional Poisson Models	332
13.1.2 Extended ACP Models	334
13.1.3 Empirical Illustrations	337
13.2 Multivariate ACP Models	338
13.3 A Simple Model for Transaction Price Dynamics	340
13.4 Autoregressive Conditional Multinomial Models	342
13.5 Autoregressive Models for Integer-Valued Variables	346
13.6 Modelling Ask and Bid Quote Dynamics	350
13.6.1 Cointegration Models for Ask and Bid Quotes	350
13.6.2 Decomposing Quote Dynamics	352
References	354
A Important Distributions for Positive-Valued Data	357
Index	365
