

# Contents

<b>Chapter 1 The Formation of the Sun and Planets</b>	1
The Sun's Protoplanetary Infancy	8
From Disks to Planets	22
 <b>Chapter 2 Formation and Early Infancy of the Earth</b>	37
The Rapid Differentiation of a Metallic Nucleus: The Core	40
Opening a Protective Umbrella:	
the Birth of the Earth's Magnetic Field	46
A Partially Molten Earth:	
the Magma Ocean Assumption	46
The Birth of the Outer Shells: The Atmosphere and the Hydrosphere	53
The Conclusion: a Planet That Was Undoubtedly Uninhabitable	59
 <b>Chapter 3 Water, Continents, and Organic Matter...</b>	61
The Two Faces of the Earth's Crust	63
The Fabulous Story Told by the Jack Hills Zircons	66
The Atmosphere Between 4.4 and 4.0 Ga: An Outline	73
From the Atmosphere to the Bottom of the Oceans:	
Was the Earth Rich in Organic Matter?	79
Was a Niche for Life Available as Early as This?	89
 <b>Chapter 4 Intermezzo: The Gestation of Life and its First Steps</b>	93
From Chemistry to Biology	96
The Unavoidable Question: What is Life?	100
The Origins of Metabolism	103
The Origin of Genetic Systems	110
The Origin of Compartments	121
A Final Word on the Gestation of Life ...	124
The Last Common Ancestor of All Existing Organisms: a Portrait	129
The Earliest Diversification of Life	143
 <b>Chapter 5 The Late Heavy Bombardment</b>	155
In Search of the Lost impacts	156
Late, or Continuous, Bombardment? The Two Competing Scenarios	160
The Late Heavy Bombardment: a Cataclysmic Scenario	161

A Rain of Meteorites: The Consequences of the Late Heavy Bombardment .....	164
<b>Chapter 6 The Messages from the Oldest Terrestrial Rocks .....</b>	<b>167</b>
The Scattered Remnants of One of the Oldest Continents .....	169
3.4 Billion Years Ago, in the Heart of a Vast Archaean Continent ... ..	172
The Saga of the Oldest Archaean Continents .....	174
Modeling the Terrestrial Atmosphere at 3.8 Ga .....	186
The Archaean Oceans: Saline and Hot? .....	190
The Earth's Machinery During the Archaean:	
Plate Tectonics Between 3.8 and 2.5 Ga .....	193
A Newly Habitable and Already Inhabited Planet .....	198
Traces of Ancient Life: Data and Controversies .....	202
<b>Chapter 7 A Planet Where Life Diversifies .....</b>	<b>211</b>
From the Primitive Earth to the Modern Earth .....	212
Birth, Life and Death of an Ocean: the Wilson Cycle .....	213
Ephemeral Giants: the Supercontinents and their Cycle .....	215
The Crucial Consequences of the Supercontinent Cycle for the Earth's	
Environment .....	216
The Appearance of Atmospheric Oxygen: a Revolutionary Event! .....	218
Disruptive Events .....	222
The Evolution of the Prokaryotes .....	229
The Origin and Diversification of the Eukaryotes .....	230
<b>Chapter 8 Other Planets, Other Living Worlds ? .....</b>	<b>241</b>
Life Elsewhere in the Solar System? .....	242
Unexpected Worlds Beyond the Solar System: Exoplanets .....	245
From "Hot Jupiters" to "Super-Earths" .....	247
"Habitable" Exoplanets: Other Earths? .....	249
The "Habitable Zone" .....	251
"Biomarkers" .....	254
<b>Epilogue .....</b>	<b>263</b>
<b>The Main Principles for Rock Classification .....</b>	<b>267</b>
<b>The 14 Chronological Stages in the Origin of the Earth and Life ..</b>	<b>273</b>
<b>Glossary .....</b>	<b>283</b>
<b>Further Reading .....</b>	<b>297</b>
<b>Figure Credits .....</b>	<b>299</b>

Young Sun, Early Earth and the Origins of Life

Lessons for Astrobiology

Gargaud, M.; Martin, H.; López-García, P.; Montmerle, T.;

Pascal, R.

2012, XII, 301 p. 303 illus., 250 illus. in color., Softcover

ISBN: 978-3-642-22551-2
