

Contents

1	Mathematical Tools	1
1.1	Banach Spaces, Norms and Linear Operators	1
1.2	Exponential of an Operator	2
1.3	Semigroups of Operators	5
1.3.1	Contraction Semigroups	7
1.4	Evolution Families	11
2	Time Evolution in Closed Quantum Systems	15
3	Time Evolution in Open Quantum Systems	19
3.1	Dynamical Maps	21
3.2	Universal Dynamical Maps	24
3.3	Universal Dynamical Maps as Contractions	26
3.4	The Inverse of a Universal Dynamical Map	28
3.5	Temporal Continuity: Markovian Evolutions	30
4	Quantum Markov Process: Mathematical Structure	33
4.1	Classical Markovian Processes	33
4.2	Quantum Markov Evolution as a Differential Equation	35
4.3	Kossakowski Conditions	39
4.4	Steady States of Homogeneous Markov Processes	42
5	Microscopic Description: Markovian Case	49
5.1	Nakajima–Zwanzig Equation	50
5.2	Weak Coupling Limit	54
5.2.1	Decomposition of V	55
5.2.2	Correlation Functions	59
5.2.3	Davies’ Theorem	60
5.2.4	Explicit Expressions for $\gamma_{k\ell}$ and $S_{k\ell}$	63

5.2.5	Typical Examples	65
5.2.6	Some Remarks on the Secular Approximation and Positivity Preserving Requirement.	70
5.2.7	Failure of the Assumption of Factorized Dynamics.	70
5.2.8	Steady State Properties	71
5.3	Singular Coupling Limit.	73
5.4	Extensions of the Weak Coupling Limit.	76
5.4.1	Weak Coupling for Multipartite Systems	76
5.4.2	Weak Coupling under External Driving	78
6	Microscopic Description: Non-Markovian Case	81
6.1	Integro-Differential Models.	82
6.2	Time-Convolutionless Forms.	83
6.3	Dynamical Coarse Graining Method	85
	References	89
	Index	95
