

Contents

- 1 About the Book** 1
- 2 Historical Background** 7
 - 2.1 And There Was Light? 7
 - 2.1.1 From Ptolemy to Newton 8
 - 2.1.2 Stars Far – Parallax 9
 - 2.1.3 Stars Bright – Photometry 11
 - 2.1.4 Star Light – Spectroscopy 12
 - 2.2 The Quest to Understand the Formation of Stars 15
 - 2.2.1 The Rise of Star Formation Theory 15
 - 2.2.2 Understanding the Sun 17
 - 2.2.3 What is a Star? 18
 - 2.2.4 Stars Evolve! 19
 - 2.2.5 The Search for Young Stars 20
 - 2.3 Observing Stellar Formation 21
 - 2.3.1 The Conquest of the Electromagnetic Spectrum 21
 - 2.3.2 Instrumentation, Facilities, and Bandpasses 22
 - 2.3.3 Stellar Formation Research from Space 25
- 3 Studies of Interstellar Matter** 33
 - 3.1 The Interstellar Medium 33
 - 3.1.1 The Stuff between the Stars 33
 - 3.1.2 Physical Properties of the ISM 35
 - 3.1.3 The Local ISM 36
 - 3.1.4 Phases of the ISM 37
 - 3.1.5 Interstellar Radiation Fields 38
 - 3.1.6 Heating Rates 40
 - 3.1.7 Cooling Processes in the ISM 43
 - 3.1.8 Heating and Cooling in H II Regions 45
 - 3.1.9 Interstellar Shocks 47
 - 3.1.10 Heating and Ionization by Cosmic Rays 49
 - 3.1.11 The Origins of Cosmic Rays 50

3.2	Interstellar Gas	51
3.2.1	Diagnostics of Neutral Hydrogen	52
3.2.2	Distribution of Neutral and Molecular Hydrogen	54
3.2.3	Distribution of Ionized Hydrogen	56
3.2.4	Distribution of CO and CO ₂	56
3.2.5	Diffuse High-Energy Emissions	58
3.3	Column Densities in the ISM	59
3.3.1	Abundance of Elements	59
3.3.2	Absorption of IR, Optical, and UV Light	61
3.3.3	Absorption of X-Rays	62
3.4	Interstellar Dust	64
3.4.1	Distribution in the Galaxy	64
3.4.2	The Size and Shape of Dust Grains	65
3.4.3	Interstellar Extinction Laws	65
3.4.4	Absorption and Scattering by Dust	68
3.4.5	Emissions from Dust	71
3.5	The ISM in other Galaxies	72
3.5.1	Overview	72
3.5.2	The Initial Mass Function	75
3.5.3	Star-Formation Rates	77
3.5.4	The Local Group and Beyond	81
3.5.5	Evolution with z	83
4	Molecular Clouds and Cores	85
4.1	Global Cloud Properties	86
4.1.1	The Observation of Clouds	87
4.1.2	Relation to H II Regions	90
4.1.3	Molecular Cloud Masses	92
4.1.4	Magnetic Fields in Clouds	93
4.1.5	Clump Mass Functions	96
4.1.6	IR Dark Clouds	98
4.1.7	High-Latitude Clouds	99
4.1.8	Photodissociation Regions	99
4.1.9	Globules	100
4.2	Cloud Dynamics	102
4.2.1	Fragmentation	103
4.2.2	Pressure Balance in Molecular Clouds	104
4.2.3	Non-Zero Magnetic Fields	105
4.2.4	Turbulence	108
4.2.5	Effects from Rotation	112
4.2.6	Ionization Fractions	113
4.2.7	Evaporation	115
4.3	Dynamic Properties of Cores	116
4.3.1	Critical Mass	116
4.3.2	Core Densities	117

4.3.3	Magnetic Braking	118
4.3.4	Ambipolar Diffusion	119
5	Concepts of Stellar Collapse	121
5.1	Classical Collapse Concepts	121
5.1.1	Initial Conditions and Collapse	122
5.1.2	Basic Equations	125
5.2	Stability Considerations	127
5.2.1	Dynamical Stability	127
5.2.2	Dynamical Instabilities	127
5.2.3	Opacity Regions.....	128
5.3	Collapse of Rotating and Magnetized Clouds	130
5.3.1	Collapse of a Slowly Rotating Sphere	130
5.3.2	Collapse of Magnetized Clouds	132
5.4	Cores, Disks and Outflows: the Full Solution?	134
5.4.1	Ambipolar Diffusion Shock	135
5.4.2	Turbulent Outflows.....	136
5.4.3	Formation of Protostellar Disks	138
6	Evolution of Young Stellar Objects	139
6.1	Protostellar Evolution	140
6.1.1	Accretion Rates	141
6.1.2	Matter Flows	142
6.1.3	Deuterium Burning and Convection	142
6.1.4	Lithium Depletion	144
6.1.5	Mass–Radius Relation	145
6.1.6	Protostellar Luminosities	146
6.2	Evolution in the HR-Diagram	147
6.2.1	Hayashi Tracks	148
6.2.2	ZAMS	150
6.2.3	The Birthline	151
6.2.4	PMS Evolutionary Timescales	152
6.2.5	HR-Diagrams and Observations.....	152
6.3	PMS Classifications	154
6.3.1	Class 0 and I Protostars	156
6.3.2	Classical T Tauri Stars	158
6.3.3	Weak-lined T Tauri Stars	162
6.3.4	Herbig–Haro Objects	164
6.3.5	FU Orionis Stars	164
6.3.6	Herbig Ae/Be Stars	165
7	Multiplicity in Star Formation	167
7.1	Observational Account	167
7.1.1	Binary Frequency	167
7.1.2	Binary Separation	169

7.2	PMS Properties of Binaries	170
7.2.1	Hen3-600 (TWA 3)	171
7.2.2	DQ Tau	172
7.2.3	AK Sco	173
7.2.4	θ^1 Ori E	174
7.3	Formation of Binaries	176
7.3.1	Fragmentation and Multiplicity	176
7.3.2	Fragmentation Support	177
7.3.3	Secondary Fragmentation	178
7.4	Mass Transfer in Compact Binaries	179
8	Accretion Phenomena and Magnetic Activity in YSOs	183
8.1	Accretion Disks	183
8.1.1	Mass Flow, Surface Temperature, and SEDs	184
8.1.2	Disk Instabilities	188
8.1.3	Ionization of Disks	190
8.1.4	Layered Accretion	192
8.1.5	Flared Disks and Atmospheres	193
8.1.6	Dispersal of Disks	195
8.1.7	Photoevaporation of Disks	196
8.1.8	MHD Disk Winds and Jets	198
8.2	Stellar Rotation in YSOs	201
8.2.1	Fast or Slow Rotators?	202
8.2.2	Contracting towards the MS	203
8.3	Magnetic Activity in PMS Stars	206
8.3.1	Magnetic Fields in PMS Stars	206
8.3.2	Field Configurations	208
8.3.3	The X-Wind Model	211
8.3.4	Funneled Accretion Streams	213
8.3.5	Magnetic Reconnection and Flares	214
8.3.6	Origins of the Stellar Field	215
9	Massive Star Formation	217
9.1	Properties of Young Massive Stars	218
9.1.1	Basic Parameters	218
9.1.2	Stellar Wind Properties	220
9.2	Distribution of Massive Stars	221
9.2.1	Clusters and Associations	221
9.2.2	Field Stars	223
9.2.3	Mass Biases and Limits	225
9.3	Observations of Early Stages	225
9.3.1	Massive Dark Clouds	226
9.3.2	Role of Maser Emission	228
9.3.3	Massive Core Mass Functions	230
9.3.4	Hot Cores and Outflows	230
9.3.5	Ultracompact H II Regions	233

9.4	Formation Concepts	236
9.4.1	Turbulent Core Model	236
9.4.2	Fragmentation in Massive Cores	238
9.4.3	Monolithic Core Collapse	239
9.4.4	Competitive Accretion in Clusters	241
9.4.5	Accretion Rates	243
9.4.6	Stellar Mergers	245
9.4.7	Impact of Massive Outflows	245
9.5	Multiplicity	247
9.6	The First Stars	248
10	High-energy Signatures in YSOs	253
10.1	The X-ray Account of YSOs	254
10.1.1	Detection of Young Stars	255
10.1.2	Correlations and Identifications	258
10.1.3	Luminosities and Variability	262
10.1.4	X-ray Temperatures	266
10.1.5	X-ray Flares	267
10.1.6	Rotation and Dynamos.....	269
10.1.7	The Search for Brown Dwarfs	270
10.2	X-rays from Protostars	271
10.2.1	The Search for Protostars.....	272
10.2.2	Magnetic Activity in Protostars	275
10.3	X-ray Spectra of PMS Stars	276
10.3.1	Spectral Characteristics.....	277
10.3.2	Modeling X-ray Spectra	277
10.3.3	Coronal Diagnostics	280
10.3.4	CTTS versus WTTS	283
10.3.5	Observations of X-ray Jets	285
10.3.6	X-Rays from Disk Fluorescence	286
10.3.7	Massive Stars in Young Stellar Clusters	287
10.4	γ -Radiation from YSOs	290
11	Star-Forming Regions	293
11.1	Embedded Stellar Clusters	294
11.1.1	The Account of ESCs	295
11.1.2	Formation.....	297
11.1.3	Morphology	298
11.1.4	Cluster Mass Functions	300
11.1.5	General Cluster Properties	302
11.1.6	Cluster Age and HR-diagrams	303
11.1.7	Cluster Distribution	304
11.1.8	Cluster Evolution	305
11.1.9	Super-Clusters	306
11.2	Well-studied Star-forming Regions	307
11.2.1	The Orion Region	308
11.2.2	The Rho Ophiuchus Cloud	311

11.2.3	IC 1396	313
11.2.4	Carina	315
11.3	Formation on Large Scales	318
11.3.1	The Taurus–Auriga Region	318
11.3.2	Turbulent Filaments	320
11.3.3	Observations of OB Associations	321
12	Proto-solar Systems and the Sun	323
12.1	Protoplanetary Disks	323
12.1.1	Proplyds	325
12.1.2	Disks of Dust	327
12.1.3	HAEBE Disks	331
12.2	The Making of the Sun	332
12.2.1	The Sun’s Origins	332
12.2.2	The Solar Nebula	333
12.2.3	The T Tauri Heritage	335
12.2.4	Evolution of the Sun	338
13	Protoplanets and Exoplanets	341
13.1	The Search for Exoplanets	341
13.1.1	Standard Detection Methods	343
13.1.2	The Rossiter–McLaughlin Effect	345
13.1.3	Detection from Ground	347
13.1.4	Detection from Space	348
13.2	The Search for Protoplanets	351
13.2.1	1RXS J160929.1-210524b	352
13.2.2	HR 8799	353
13.2.3	Fomalhaut b	353
13.3	Planet Formation	354
13.3.1	Planetesimals	355
13.3.2	The Snow Line	357
13.3.3	The Condensation Sequence	358
13.3.4	Core (Terrestrial) Planets	360
13.3.5	Giant Planets	363
13.3.6	Resonances and Migration	367
13.3.7	The Making of the Moon	369
A	Gas Dynamics	371
A.1	Temperature Scales	372
A.2	The Adiabatic Index	374
A.3	Polytropes	375
A.4	Thermodynamic Equilibrium	376
A.5	Gravitational Potential and Mass Density	377
A.6	Conservation Laws	379
A.7	Hydrostatic Equilibrium	380
A.8	The Speed of Sound	381

A.9	Timescales	382
A.10	Spherically Symmetric Accretion	383
A.11	Rotation	384
A.12	Ionized Matter	386
A.13	Thermal Ionization	387
A.14	Ionization Balance	388
B	Magnetic Fields and Plasmas	391
B.1	Magnetohydrodynamics	391
B.2	Charged Particles in Magnetic Fields	394
B.3	Bulk and Drift Motions	395
B.4	MHD Waves	397
B.5	Magnetic Reconnection	398
B.6	Dynamos	401
B.7	Magnetic Disk Instabilities	405
B.8	Expressions	407
C	Radiative Interactions with Matter	409
C.1	Radiative Equilibrium	410
C.2	Radiation Flux and Luminosity	411
C.3	Opacities	412
C.4	Mean Opacities	414
C.5	Scattering Opacities	415
C.6	Continuum Opacities	416
C.7	Line Opacities	417
C.8	Molecular Excitations	419
C.9	Dust Opacities	423
D	Spectroscopy	425
D.1	Line Profiles	425
D.2	Zeeman Broadening	426
D.3	Equivalent Widths and Curve of Growth	427
D.4	Spectra from Collisionally Ionized Plasmas	429
D.5	X-ray Line Diagnostics	431
E	Abbreviations	435
F	Institutes, Observatories, and Instruments	443
G	Variables, Constants, and Units	451
	References	457
	Index	499

The Formation and Early Evolution of Stars
From Dust to Stars and Planets

Schulz, N.S.

2012, XXII, 518 p., Hardcover

ISBN: 978-3-642-23925-0
