

Contents

| | |
|---|-----------|
| Preface | v |
| 1 Scheduling Models | 1 |
| 1.1 The RCPSP and some Generalizations | 1 |
| 1.2 Machine Scheduling | 14 |
| 1.2.1 Single-machine scheduling | 14 |
| 1.2.2 Parallel machine scheduling | 14 |
| 1.2.3 Shop scheduling | 15 |
| 1.2.4 Multi-processor task scheduling | 17 |
| 1.3 Applications of the RCPSP | 18 |
| 1.4 Reference Notes | 28 |
| 2 Algorithms and Complexity | 29 |
| 2.1 Easy and Hard Problems | 29 |
| 2.1.1 Polynomially solvable problems | 30 |
| 2.1.2 NP-hard problems | 30 |
| 2.2 Shortest Path Algorithms | 35 |
| 2.2.1 Dijkstra's algorithm | 35 |
| 2.2.2 Label-correcting algorithms | 39 |
| 2.2.3 Detection of negative cycles | 42 |
| 2.2.4 Floyd-Warshall algorithm | 42 |
| 2.3 Linear Programming | 44 |
| 2.3.1 Linear programs and the simplex algorithm | 44 |
| 2.3.2 Duality | 52 |
| 2.3.3 The revised simplex method | 56 |
| 2.3.4 Delayed column generation techniques | 58 |
| 2.4 Lagrangian Relaxation | 62 |
| | vii |

| | | |
|----------|---|------------|
| 2.5 | Network Flow Algorithms | 65 |
| 2.5.1 | The minimum cost flow problem | 65 |
| 2.5.2 | The residual network and decomposition of flows | 67 |
| 2.5.3 | The maximum flow problem | 72 |
| 2.5.4 | Flows and cuts | 73 |
| 2.5.5 | Algorithms for the maximum flow problem | 76 |
| 2.5.6 | Algorithms for the minimum cost flow problem | 80 |
| 2.6 | Branch-and-Bound Algorithms | 82 |
| 2.6.1 | Basic concepts | 82 |
| 2.6.2 | The knapsack problem | 84 |
| 2.6.3 | Integer linear programs | 88 |
| 2.7 | Constraint Programming | 91 |
| 2.8 | The Satisfiability Problem (SAT) | 97 |
| 2.9 | Dynamic Programming | 100 |
| 2.10 | Heuristic Methods | 103 |
| 2.10.1 | Local search algorithms | 103 |
| 2.10.2 | Genetic algorithms | 110 |
| 2.10.3 | Ant colony optimization | 113 |
| 2.11 | Reference Notes | 115 |
| 3 | Resource-Constrained Project Scheduling | 117 |
| 3.1 | Basics | 117 |
| 3.1.1 | Temporal analysis | 117 |
| 3.1.2 | A classification of schedules | 119 |
| 3.1.3 | Reference notes | 121 |
| 3.2 | Heuristic Methods | 122 |
| 3.2.1 | Schedule generation schemes | 122 |
| 3.2.2 | Priority-based heuristics | 128 |
| 3.2.3 | Local search algorithms | 130 |
| 3.2.4 | Genetic algorithms | 132 |
| 3.2.5 | Ant colony optimization | 136 |
| 3.2.6 | Heuristics for the multi-mode case | 137 |
| 3.2.7 | Reference notes | 137 |
| 3.3 | MIP Formulations of the RCPSP | 138 |

| | | |
|-------|--|-----|
| 3.3.1 | Discrete time formulations | 138 |
| 3.3.2 | Continuous time formulations | 140 |
| 3.3.3 | Event-based formulations | 142 |
| 3.3.4 | Project scheduling with labor constraints | 148 |
| 3.3.5 | Reference notes | 150 |
| 3.4 | A SAT Formulation of the RCPSP | 150 |
| 3.5 | General Objective Functions | 151 |
| 3.5.1 | Regular functions | 152 |
| 3.5.2 | Linear functions | 152 |
| 3.5.3 | Convex piecewise linear functions | 154 |
| 3.5.4 | General sum functions | 157 |
| 3.5.5 | Reference notes | 161 |
| 3.6 | Constraint Propagation | 162 |
| 3.6.1 | Basic relations | 162 |
| 3.6.2 | Start-start distance matrix | 163 |
| 3.6.3 | Symmetric triples and extensions | 165 |
| 3.6.4 | Disjunctive sets | 168 |
| 3.6.5 | Cumulative resources | 186 |
| 3.6.6 | Constraint propagation for the multi-mode case | 186 |
| 3.6.7 | Reference notes | 192 |
| 3.7 | Lower Bounds | 193 |
| 3.7.1 | Combinatorial constructive lower bounds | 194 |
| 3.7.2 | Lower bounds based on Lagrangian relaxation | 196 |
| 3.7.3 | An LP-based constructive lower bound | 197 |
| 3.7.4 | An LP-based destructive method | 203 |
| 3.7.5 | A destructive method for the multi-mode case | 211 |
| 3.7.6 | Reference notes | 216 |
| 3.8 | Branch-and-Bound Algorithms | 217 |
| 3.8.1 | An algorithm based on precedence trees | 217 |
| 3.8.2 | An algorithm based on extension alternatives | 221 |
| 3.8.3 | An algorithm based on delaying alternatives | 225 |
| 3.8.4 | An algorithm based on schedule schemes | 231 |
| 3.8.5 | Algorithms for the multi-mode case | 237 |
| 3.8.6 | Reference notes | 238 |

| | | |
|----------|--|------------|
| 4 | Complex Job-Shop Scheduling | 239 |
| 4.1 | The Job-Shop Problem | 239 |
| 4.1.1 | Problem formulation | 239 |
| 4.1.2 | The disjunctive graph model | 240 |
| 4.2 | Heuristic Methods | 244 |
| 4.3 | Branch-and-Bound Algorithms | 252 |
| 4.4 | Generalizations | 253 |
| 4.5 | Job-Shop Problems with Flexible Machines | 259 |
| 4.5.1 | Problem formulation | 259 |
| 4.5.2 | Heuristic methods | 260 |
| 4.6 | Job-Shop Problems with Transport Robots | 267 |
| 4.6.1 | Problem formulation | 267 |
| 4.6.2 | Problems without transportation conflicts | 268 |
| 4.6.3 | Problems with transportation conflicts | 271 |
| 4.6.4 | Constraint propagation | 279 |
| 4.6.5 | Lower bounds | 285 |
| 4.6.6 | Heuristic methods | 296 |
| 4.7 | Job-Shop Problems with Limited Buffers | 300 |
| 4.7.1 | Problem formulation | 300 |
| 4.7.2 | Representation of solutions | 301 |
| 4.7.3 | Flow-shop problems with intermediate buffers | 306 |
| 4.7.4 | Job-shop problems with pairwise buffers | 308 |
| 4.7.5 | Job-shop problems with output buffers | 308 |
| 4.7.6 | Job-shop problems with input buffers | 314 |
| 4.7.7 | Job-shop problems with job-dependent buffers | 315 |
| 4.8 | Reference Notes | 316 |
| | Bibliography | 319 |
| | Index | 335 |
