

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Need for a PCS Engineering Framework	1
1.2	Suitable Industrial Context for Application	2
1.3	Structure of the Book	3
<b>2</b>	<b>Production Control Strategies (PCS)</b>	7
2.1	Fundamental Concepts and Coherences	7
2.1.1	PCS in the Broader Context of Production Planning and Control	7
2.1.2	The Push/Pull Enigma and Their Basic Implementations	8
2.1.3	The Order Penetration Point	12
2.1.4	The Influence of the PCS on Operational Performance	12
2.2	Review of Current Research on PCS	15
2.2.1	Segmentation of Literature	15
2.2.2	PCS Method Development	16
2.2.3	PCS Selection	27
2.2.4	PCS Implementation	32
2.2.5	Related Design Questions	33
2.3	Synthesis and Positioning of the Following Work	35
<b>3</b>	<b>A Queuing Network Based Framework for PCS Engineering</b>	37
3.1	Design Drivers and Initial Complexity Reduction	37
3.1.1	Structuring Design Drivers	37
3.1.2	Complexity Reduction by Defining Planning Segments	38
3.2	Generic Model Formulation	41
3.2.1	Notation	41
3.2.2	Queuing Network Representation of Planning Segments	41
3.2.3	Basic Properties	44
3.2.4	Analysis of the Resulting Solution Space	46

3.3 Mapping Production System Variability .....	48
3.3.1 An Integrated Approach to Stochastic Modeling of Production System Variability .....	48
3.3.2 Definition of a Measure for Production System Variability ...	51
3.4 Mapping of Demand Variability .....	53
3.4.1 Stochastic Modeling of Demand Variability .....	53
3.4.2 Excursion: Possible Involvement of Customers .....	57
<b>4 Numerical Optimization of Control Parameters Along a PCS Engineering Process .....</b>	<b>59</b>
4.1 Objective Function Design .....	59
4.1.1 Selection of Valuation Measures .....	59
4.1.2 Value Analysis .....	60
4.2 Implementation of a Supporting Simulation Framework .....	65
4.2.1 Introduction to Discrete-Event Simulation and the Platform ‘AnyLogic’ .....	65
4.2.2 Implementation of Planning Segments .....	67
4.2.3 Implementation of the Demand Model .....	69
4.2.4 Implementation of the Production System Model .....	70
4.3 A PCS Engineering Process to Optimize Production Control Parameters .....	72
4.3.1 Approach and Process Overview .....	72
4.3.2 Step 1 – $K_i$ Determination .....	75
4.3.3 Step 2 – $OPP_j$ Determination .....	78
4.3.4 Step 3 – $FCT_j$ and $S_{ij}$ Determination .....	79
<b>5 Investigation of the Push/Pull Integration .....</b>	<b>85</b>
5.1 Influencing Factors and Rules for the Decision among Push and Pull .....	85
5.1.1 Hypothesis and Experiment Design .....	85
5.1.2 Determination of Relevant Factors and Derivation of Decision Rules .....	88
5.2 Closed-Form Determination of the Push/Pull Integration Parameters $FCT^*$ and $S\%^*$ .....	90
5.2.1 Hypothesis and Experiment Design .....	90
5.2.2 Derivation of a Closed-Form Parameterization for Hybrid Control .....	92
5.2.3 Extension to the Multi-Product Case .....	95
5.3 Analysis of the Performance Increase Achievable with the Hybrid Strategy .....	96
5.3.1 Drivers for the Relevance of the Decision among Hybrid and Pure Strategies .....	96
5.3.2 Derivation of a Demand Variability Measure to Characterize Environments That Favor Hybrid Strategies .....	99
5.4 Summary of Insights .....	101

<b>6 Case Study from the Electronics Manufacturing Industry</b>	103
6.1 Case Introduction and Specific Challenges	103
6.1.1 Introduction to the Business and Manufacturing Process	103
6.1.2 Identification of the Improvement Need and Specific Challenges	104
6.2 Model Development and Parameterization	106
6.2.1 Production System Model	106
6.2.2 Parameterization of Planning Segments	107
6.2.3 Parameterization of the Demand Model	108
6.3 PCS Design	109
6.3.1 Strategy Derivation	109
6.3.2 Impact Evaluation	111
6.4 Implications and Implementation Hints	114
<b>7 Conclusion and Further Research</b>	117
7.1 Research Summary	117
7.2 Limitations and Further Research Directions	119
<b>8 Appendix</b>	121
8.1 List of Figures	121
8.2 List of Tables	123
8.3 List of Abbreviations	124
8.4 List of Notations	125
8.5 Complex Production Systems	128
8.6 Literature Review	128
8.7 Delimitation against Other Generic PCS	133
8.8 Evolution of the Maximum Size Reduction of the Solution Space	134
8.9 Simulation Model Implementation	135
8.9.1 Planning Segment Graphical Representation	135
8.9.2 Demand Model: Graphical Representation	135
8.9.3 Java Code Executed at Forecast Arrival (Event ' <i>FCarrival</i> ')	137
8.10 PCS Engineering Process: Numerical Optimization of Model Parameters	138
8.10.1 Setups for Experiments and Illustrations	138
8.10.2 Influence of Over-Capacity on the MTF Versus MTS Decision	139
8.10.3 Converting Utility Improvements into WIP Reductions	141
8.11 Investigation of the Push/Pull Integration	142
8.11.1 Graphical Representation of Experimental Setup in Anylogic	142

8.11.2 Experiments and Results to Determine Influencing Factors for Upstream Control .....	147
8.11.3 Experiments and Results to Determine Closed-Form Solutions for $FCT^*$ and $S\%^*$ .....	148
8.11.4 Extension to Arbitrary Forecast Error Distributions .....	157
8.11.5 Experimental Setup for the Extension to the Multi-Product Case .....	161
8.11.6 Analysis of Drivers for the Impact Magnitude .....	161
8.12 Anylogic Model of Case Study .....	165
8.13 Used Software Products .....	169
8.14 About the Author .....	170
<b>References</b> .....	171

Engineering Production Control Strategies  
A Guide to Tailor Strategies that Unite the Merits of  
Push and Pull

Karrer, C.

2012, X, 178 p., Hardcover

ISBN: 978-3-642-24141-3
