

Contents

Fibrinolytic Bacterial Enzymes with Thrombolytic Activity

1	Introduction	1
1.1	Thrombus Formation	4
1.2	Thrombolytic Therapy	6
1.3	Sources of Fibrinolytic Enzymes	7
1.4	Production of Bacterial Fibrinolytic Enzyme In Vitro	11
1.5	Enzyme Purification.	13
1.6	Biochemical Characteristics of Purified Microbial Fibrinolytic Enzymes	14
2	Streptokinase	17
2.1	Structure and Mechanism of Action.	18
2.2	Enhancing Streptokinase.	20
2.3	Production of Streptokinase	21
2.4	Assaying Streptokinase.	24
2.5	Recovery and Purification.	26
3	Staphylokinase	28
3.1	Structure of Staphylokinase	28
3.2	Mechanism of Fibrin Selectivity	28
3.3	Pharmacokinetics and Thrombolytic Properties in Patients	28
3.4	Immunogenicity	29
3.5	PEG-Derivatized Cysteine-Substitution Variants for Single Bolus Administration	31
4	Serrapeptase	31
5	Nattokinase.	33
5.1	History of Natto	33

5.2	Discovery of Nattokinase	34
5.3	Structure and Functions	35
5.4	Prolonged Action.	37
5.5	Thrombolytic Effect In Vivo.	37
5.6	Benefits on Blood Pressure.	39
5.7	Preparation of Natto in Japan	39
5.8	Preparation of Natto in Microbiology Laboratories	41
5.9	Contraindications and Precautions	41
6	Assessment of Fibrinolytic Activity	43
6.1	Indirect Assays	44
6.2	Esterolytic Assays	50
6.3	Fluorimetric Assays	50
7	Hemostasis Screening Tests	51
7.1	CBC Assay.	51
7.2	PT Assay	52
7.3	PTT Assay	54
7.4	TT Assay	56
7.5	Fibrinogen Assays	56
7.6	D-dimer Assays.	57
7.7	BT Assay	58
8	Conclusions and Future Research Directions.	58
