1	Introduction	1
	References	4
2	Hopping Mechanism	7
2.1	General Methodology	8
2.1.1	Marcus Electron Transfer Rate	8
2.1.2	Transfer Integral	8
2.1.3	Reorganization Energy	11
2.1.4	Mobility Evaluation	12
2.2	Application I: Siloles	14
2.2.1	Computational Details	14
2.2.2	Results and Discussion	15
2.3	Application II: Triphenylamine Dimers	19
2.3.1	Computational Details	20
2.3.2	Results and Discussion	20
2.4	Application III: Oligothiophenes	23
2.4.1	Computational Details	24
2.4.2	Results and Discussion	24
2.5	Incorporate Nuclear Tunneling Effect in the Hopping Picture	27
2.5.1	Fermi's Gold Rule	28
2.5.2	Short-Time Integration in Fermi's Golden Rule	30
2.5.3	From Fermi's Golden Rule to Marcus Rate	31
2.6	Application: Oligoacenes	31
2.6.1	Computational Details	31
2.6.2	Results and Discussion	32
2.7	Incorporate Dynamic Disorder Effect in the Hopping Picture	35
2.7.1	Two-Step Approach	35
2.7.2	Multi-Scale Simulation	35
2.8	Application: Pentacene	36
2.8.1	Computational Details	36

2.8.2	Results and Discussion	37
2.9	Conclusion	39
