<b>1</b>	<b>Introduction</b>	1
1.1	Background	1
1.2	Renewable Energies in the European Energy Mix	3
1.3	Aim and Structure of the Study	7
<b>2</b>	<b>Future Perspectives of Electrical Energy Supply</b>	9
2.1	Aims for a Long-Term Viable Development of a Renewable-Based Electricity System	9
2.1.1	Efficient Allocation and Just Distribution	10
2.1.2	An Operative Action Rule	11
2.2	Indicators for the Evaluation of Balancing Strategies	12
2.2.1	Indicators for Environmental Effects	13
2.2.2	Indicators for Resource Availability	14
2.2.3	Indicators for the Design of the Energy Supply System	16
2.3	Political Governance Towards a Renewable Energy Electricity System in Europe	17
2.3.1	Historical Background, Current Status and Development of Europe's Energy System	17
2.3.1.1	Europe's Growing Energy Dependence	17
2.3.1.2	Climate Change Constraints	18
2.3.1.3	Climate Change as a Driving Force Behind the Search for a Low-Carbon Electricity System	18
2.3.1.4	Growing Diversification of the Energy Supply	18
2.3.1.5	Trends in Renewable Energy Production in Europe	19
2.3.2	Political Governance Activities for Organising the Future Energy System	19
2.3.2.1	Regional Cooperation in Developing Renewables	19
2.3.2.2	National Actions Within the EU on Climate Change and Renewable Energy	21
2.3.2.3	European Policies for a Low-Carbon Energy Market	24
2.3.2.4	The European Energy Council of 2011	28
2.3.2.5	Moving Towards Higher Emission Reduction Targets	28

2.3.2.6 Roadmap for a Low-Carbon Economy in 2050 .....	28
2.3.2.7 Supporting Infrastructure Development for Renewable Energy .....	29
2.3.2.8 Public Acceptance .....	29
2.3.3 Challenges Ahead .....	30
2.4 Economics of Storing Values .....	30
2.4.1 Energy Economic Background .....	30
2.4.2 Theory of Storing Values .....	32
2.4.2.1 Storing Values Without Technologies .....	32
2.4.2.2 Storing Values Using Technologies .....	33
2.5 Summary and Conclusions .....	35
<b>3 Existing Energy System Studies .....</b>	<b>37</b>
3.1 Applicability of Existing Future Energy Scenarios as Framework Conditions for the Analysis of Strategies .....	37
3.1.1 Energy System Modelling: A Theoretical Perspective .....	38
3.1.2 Basic Approaches in Energy System Analysis Followed in This Study and Data Requirements .....	41
3.1.3 Comparison of Relevant Energy System Analyses According to Their General Characteristics .....	44
3.2 The Derivation of Future Electricity Supply Parameters as Inputs for the Analysis of Balancing Strategies .....	49
3.2.1 Assumptions in the Political Renewable Energy Sources (RES) Scenario: Intensified Funding .....	51
3.2.2 Assumptions According to the Lead Scenario 2009 .....	51
3.2.3 Effects on the Conventional Power Station Park .....	52
3.2.3.1 Renewable Energy Sources .....	52
3.2.3.2 Fuel Prices .....	53
3.2.3.3 Resulting Power Station Parks .....	55
3.2.4 Evaluation of Development Paths .....	56
3.3 Summary and Conclusions .....	58
<b>4 Demand for Balancing Electrical Energy and Power .....</b>	<b>61</b>
4.1 Assessing the Balancing Demand and Storage Employment Based on Scenarios for Germany .....	61
4.1.1 Assessing the Demand of Balancing Electrical Energy and Power .....	62
4.1.1.1 Effect on the Residual Load and the Available Power Station Power .....	62
4.1.1.2 Characteristics of Possible Wind Calms Lasting Several Days .....	66
4.1.1.3 Dimensioning the Necessary Storage Capacity .....	66
4.1.2 Estimation of the Storage Employment .....	70

4.2 Assessing the Storage Demand Based on an Optimised Pan-European Low-Carbon Electrical Energy Supply Strategy .....	73
4.2.1 General Aspects and Boundary Conditions .....	73
4.2.2 Power Flow Calculation .....	74
4.2.3 System Optimisation .....	76
4.2.4 Cost Data and Other Assumptions .....	77
4.2.5 First Model Results .....	79
4.2.6 Discussion of Results .....	79
4.3 Summary and Conclusions .....	81
<b>5 Technologies for Balancing Electrical Energy and Power .....</b>	<b>83</b>
5.1 Classification of Energy Storage Systems and Systems Offering Positive and Negative Control Power .....	83
5.2 Technical Description of “Electricity to Electricity” Energy Storage Technologies for a Balanced Electrical Energy and Power Supply .....	86
5.2.1 “Mechanical” Storage Systems for Electric Power .....	86
5.2.1.1 Compressed Air Energy Storage (CAES) .....	86
5.2.1.2 Pumped Hydropower Plants .....	90
5.2.1.3 Hydro Storage Systems .....	91
5.2.1.4 Flywheels .....	91
5.2.2 “Electrical” Storage Systems for Electric Power .....	92
5.2.2.1 Electrochemical Double-Layer Capacitors (“Supercaps”) .....	92
5.2.2.2 Superconducting Coils .....	93
5.2.3 “Chemical” Storage Systems for Electric Power .....	93
5.2.3.1 Lead-Acid Batteries .....	93
5.2.3.2 High Temperature Sodium-Based Batteries .....	94
5.2.3.3 Lithium-Ion Batteries .....	95
5.2.3.4 Nickel Cadmium (NiCd) and Nickel-Metal-Hydride (NiMH) Batteries .....	95
5.2.3.5 Redox-Flow Batteries .....	96
5.2.3.6 Hydrogen Storage Systems .....	97
5.3 Technical Description and Potential of “Electricity to Anything” Energy Storage Technologies for a Balanced Electrical Energy and Power Supply .....	99
5.3.1 DSM Industrial Sector .....	100
5.3.2 Balance Provision by Electrical Mobility .....	100
5.3.3 DSM Household Sector .....	101
5.3.3.1 Technical Potential of DSM in the Household Sector .....	101
5.3.3.2 Expected Economic Benefits from DSM in the Household Sector .....	105
5.3.4 Shutdown of Renewable Power Generation .....	108
5.3.5 Generation of Chemical Fuels such as Hydrogen, Methane or Methanol from Electricity .....	108

5.4	Technical Description of “Anything to Electricity” Energy Storage Technologies for a Balanced Electrical Energy and Power Supply .....	109
5.4.1	CHP Plants with Thermal Storage .....	109
5.4.2	Conventional Power Plants Using Fossil, Nuclear, Hydro or Biofuels .....	113
5.5	Conclusions on Options for Demand Response and Demand-Side Management .....	113
5.6	Life Cycle Cost Analysis of Storage Technologies .....	114
5.7	Assessment of Future Viability of the Technologies’ Environmental Issues, Resource Use and System Characteristics ...	119
5.7.1	Methodology and Data Applied for Quantitative Assessment .....	120
5.7.2	Environmental Impacts .....	120
5.7.2.1	Assessment Methodology and Assumptions .....	120
5.7.2.2	Environmental External Costs of Balancing Technologies .....	123
5.7.2.3	Environmental Impacts of Balancing Technologies Differentiated into Categories .....	126
5.7.3	Resource Use .....	128
5.7.3.1	Types and Amounts of Resources Required .....	128
5.7.3.2	Current Availability of Relevant Mineral Resources .....	129
5.7.3.3	Resource Potentials for the Production of Balancing Technologies .....	131
5.7.4	System Characteristics Relevant for Society .....	134
5.7.4.1	Supply Reliability .....	135
5.7.4.2	Risk Avoidance .....	137
5.7.4.3	Openness to Options .....	137
5.7.5	Conclusions on the Future Viability of Various Approaches to Energy Storage .....	138
5.8	Summary and Conclusions .....	138
<b>6</b>	<b>Technology of Electricity Networks and Economical Impacts .....</b>	<b>143</b>
6.1	Assessment of Technical Barriers Considering the Total System Including Network Requirements .....	143
6.1.1	Interaction of Load Control with the Distribution Network .....	143
6.1.2	Transmission Network Expansion .....	149
6.2	Economical Impacts of Balancing Activities at the Daily and Seasonal Scales .....	154
6.2.1	Distribution Network Requirements for Avoiding Restrictions .....	154
6.2.2	Effects of the Transmission Network Expansion Measures .....	158

6.2.3	Conclusions on Economical Impacts of Balancing Activities .....	160
6.3	Summary and Conclusions .....	160
<b>7</b>	<b>Economic Analysis and Policy .....</b>	<b>163</b>
7.1	Problems in a Market Economy without Economic Policy: Weather-Based Supply and Culturally Caused Demand Fluctuations .....	163
7.1.1	The Insurance Function of the Market .....	163
7.1.2	Fluctuations and Smoothing of Electricity Demand: Energy Saving Reduces the Demand for Storage Facilities .....	164
7.1.3	Fluctuations and Smoothing of Supply .....	166
7.1.4	Coordination of Supply and Demand .....	166
7.1.5	Aspects of Long-Run Developments .....	167
7.1.6	Towards a Theory of Location for Storage Facilities .....	168
7.2	Analysis of Economic Framework Conditions .....	169
7.2.1	Introduction: The Theory of Economic Policy .....	169
7.2.2	The Theory of Economic Policy in the Area of Environmental and Technology Problems .....	170
7.2.2.1	Tradable CO <sub>2</sub> Permits, Taxes and Other Instruments .....	170
7.2.2.2	Research and Technical Progress: Trusting Markets Only Versus Support for Complementary Technologies? .....	171
7.2.2.3	Beyond Pigovian Corrections .....	172
7.2.2.4	Policies for Imported Resources and Political Risks .....	172
7.2.3	The Current Practice of Government Support .....	172
7.2.4	Stylised Views on Economic Policy: First Best, Second Best, History and Transition .....	173
7.2.4.1	First Best .....	173
7.2.4.2	Second Best .....	174
7.2.4.3	Historical Heritage .....	175
7.2.4.4	Transition to Science Based Views .....	175
7.2.5	Economic Policy Recommendations .....	176
7.3	Summary and Conclusions .....	177
<b>8</b>	<b>Legal Analysis of Balancing Strategies .....</b>	<b>179</b>
8.1	Introductory Remarks .....	179
8.2	Energy Storage .....	180
8.2.1	Centralised Storage Systems .....	180
8.2.1.1	Planning and Licensing .....	180
8.2.1.2	Regulatory Incentives .....	181
8.2.1.3	Access .....	181
8.2.1.4	Unbundling .....	184

8.2.2 Decentralised Storage Systems, Especially E-mobility .....	185
8.2.2.1 Legal Relationships .....	185
8.2.2.2 Contractual Relationships Within Networks .....	187
8.2.2.3 Questions Concerning Data Protection .....	189
8.3 Balancing Strategies in Distribution Grids .....	190
8.3.1 Smart Meter .....	190
8.3.1.1 Topics Regarding Data Protection .....	191
8.3.1.2 Contractual Relationships in Networks .....	195
8.3.2 Smart Grid/Demand-Side Management .....	195
8.3.2.1 Data Protection .....	196
8.3.2.2 Contractual Relationships in Networks .....	196
8.4 Transmission Network Expansion .....	196
8.4.1 The Status Quo for Planning and Licensing of Network Expansion .....	197
8.4.2 The Status Quo of Investment Regulation as Part of Economic Energy Regulation .....	200
8.4.2.1 Unbundling .....	201
8.4.2.2 Network Investment Duties for TSOs .....	201
8.4.2.3 Investment Planning Duties of TSOs as an Instrument of Reflexive Steering .....	203
8.4.2.4 Investment Incentives and Securing Investments as an Aspect of Price Regulation .....	205
8.4.3 Concepts for a Reform of Planning, Licensing and Regulating of Network Expansion .....	207
8.4.3.1 National Concepts .....	207
8.4.3.2 European Concepts .....	209
8.4.4 Summary and Conclusions .....	211
<b>9 Conclusions and Recommendations .....</b>	<b>213</b>
9.1 Overall Aim and Results .....	213
9.2 Challenges and Recommendations .....	214
9.2.1 Development of Technical Infrastructure .....	215
9.2.2 Framework Conditions and Organisational Aspects .....	217
9.2.2.1 Market Conditions for Balancing Technologies .....	217
9.2.2.2 Specific Support for the Application of Balancing Technologies .....	220
<b>References .....</b>	<b>223</b>
<b>Glossary .....</b>	<b>233</b>
<b>List of Authors .....</b>	<b>241</b>
<b>Appendix .....</b>	<b>245</b>
<b>Further volumes of the series Ethics of Science and Technology Assessment (Wissenschaftsethik und Technikfolgenbeurteilung) .....</b>	<b>251</b>

Balancing Renewable Electricity  
Energy Storage, Demand Side Management, and  
Network Extension from an Interdisciplinary Perspective  
Droste-Franke, B.; Paal, B.; Rehtanz, C.; Sauer, D.U.;  
Schneider, J.-P.; Schreurs, M.; Zieseimer, Th.  
2012, XLVIII, 256 p., Hardcover
