1	Introduction	1
	References	10
2	Quantum Theory of Gravitational-Wave Detectors	13
2.1	Preface	13
2.2	Introduction	13
2.3	An Order-of-Magnitude Estimate	14
2.4	Basics for Analyzing Quantum Noise	15
	2.4.1 Quantization of the Optical Field and the Dynamics.	15
	2.4.2 Quantum States of the Optical Field	17
	2.4.3 Dynamics of the Test-Mass	19
	2.4.4 Homodyne Detection	20
2.5	Examples.	20
	2.5.1 Example I: Free Space	21
	2.5.2 Example II: A Tuned Fabry-Pérot Cavity	23
	2.5.3 Example III: A Detuned Fabry-Pérot Cavity	25
2.6	Quantum Noise in an Advanced GW Detector	26
	2.6.1 Input-Output Relation of a Simple Michelson Interferometer	26
	2.6.2 Interferometer With Power-Recycling Mirror and Arm Cavities	29
	2.6.3 Interferometer With Signal-Recycling	31
2.7	Derivation of the SQL: A General Argument.	34
2.8	Beating the SQL by Building Correlations.	36
	2.8.1 Signal-Recycling	36
	2.8.2 Squeezed Input.	37
	2.8.3 Variational Readout: Back-Action Evasion	38
	2.8.4 Optical Losses	39

2.9	Optical Spring: Modification of Test-Mass Dynamics	41
2.9.1	Qualitative Understanding of Optical-Spring Effect . . .	41
2.10	Continuous State Demolition: Another Viewpoint on the SQL	42
2.11	Speed Meters	44
2.11.1	Realization I: Coupled Cavities	44
2.11.2	Realization II: Zero-Area Sagnac	47
2.12	Conclusions	48
	References	48
3	Modifying Input Optics: Double Squeezed-Input	51
3.1	Preface	51
3.2	Introduction	51
3.3	Quantum Noise Calculation	54
3.3.1	Filter Cavity	54
3.3.2	Quantum Noise of the Interferometer	56
3.4	Numerical Optimizations	58
3.5	Conclusions	61
	References	61
4	Modifying Test-Mass Dynamics: Double Optical Spring.	65
4.1	Preface	65
4.2	Introduction	65
4.3	General Considerations	67
4.4	Further Considerations: Removing the Friction Term	69
4.5	“Speed-Meter” Type of Response	70
4.6	Conclusions and Future Work	72
	References	72
5	Measuring a Conserved Quantity: Variational Quadrature Readout.	75
5.1	Preface	75
5.2	Introduction	75
5.3	Dynamics	77
5.4	Variational Quadrature Readout	78
5.5	Stroboscopic Variational Measurement	81
5.6	Conclusions	82
	References	82
6	MQM With Three-Mode Optomechanical Interactions	85
6.1	Preface	85
6.2	Introduction	86
6.3	Quantization of Three-Mode Parametric Interactions.	88
6.4	Quantum Limit for Three-Mode Cooling	90

6.5	Stationary Tripartite Optomechanical Quantum Entanglement	95
6.6	Three-Mode Interactions With a Coupled Cavity	99
6.7	Conclusions	104
	References	104
7	Achieving the Ground State and Enhancing Optomechanical Entanglement	107
7.1	Preface	107
7.2	Introduction	107
7.3	Dynamics and Spectral Densities	110
	7.3.1 Dynamics	110
	7.3.2 Spectral Densities	112
7.4	Unconditional Quantum State and Resolved-Sideband Limit. . .	114
7.5	Conditional Quantum State and Wiener Filtering	115
7.6	Optimal Feedback Control	118
7.7	Conditional Optomechanical Entanglement and Quantum Eraser	119
7.8	Effects of Imperfections and Thermal Noise	122
7.9	Conclusions	123
	References	123
8	Universal Entanglement Between an Oscillator and Continuous Fields	127
8.1	Preface	127
8.2	Introduction	127
8.3	Dynamics and Covariance Matrix	129
8.4	Universal Entanglement	131
8.5	Entanglement Survival Duration	133
8.6	Maximally-Entangled Mode	133
8.7	Numerical Estimates	136
8.8	Conclusions	137
	References	137
9	Nonlinear Optomechanical System for Probing Mechanical Energy Quantization.	141
9.1	Preface	141
9.2	Introduction	141
9.3	Coupled Cavities	142
9.4	General Systems	147
9.5	Conclusions	148
	References	148

10	State Preparation: Non-Gaussian Quantum State	151
10.1	Preface	151
10.2	Introduction	151
10.3	Order-of-Magnitude Estimate	153
10.4	General Formalism	155
10.5	Single-Photon Case	157
10.6	Conclusions	159
10.7	Appendix	159
10.7.1	Optomechanical Dynamics	159
10.7.2	Causal Whitening and Wiener Filter	160
10.7.3	State Transfer Fidelity	162
	References	163
11	Probing Macroscopic Quantum States	165
11.1	Preface	165
11.2	Introduction	165
11.3	Model and Equations of Motion	171
11.4	Outline of the Experiment With Order-of-Magnitude Estimate	174
11.4.1	Timeline of Proposed Experiment	174
11.4.2	Order-of-Magnitude Estimate of the Conditional Variance	175
11.4.3	Order-of-Magnitude Estimate of State Evolution	176
11.4.4	Order-of-Magnitude Estimate of the Verification Accuracy	178
11.5	The Conditional Quantum State and its Evolution	179
11.5.1	The Conditional Quantum State Obtained From Wiener Filtering	180
11.5.2	Evolution of the Conditional Quantum State	180
11.6	State Verification in the Presence of Markovian Noises	182
11.6.1	A Time-Dependent Homodyne Detection and Back-Action-Evasion	182
11.6.2	Optimal Verification Scheme and Covariance Matrix for the Added Noise: Formal Derivation	186
11.6.3	Optimal Verification Scheme With Markovian Noise	188
11.7	Verification of Macroscopic Quantum Entanglement	190
11.7.1	Entanglement Survival Time	191
11.7.2	Entanglement Survival as a Test of Gravity Decoherence	192
11.8	Conclusions	193

11.9	Appendix	193
11.9.1	Necessity of a Sub-Heisenberg Accuracy for Revealing Non-Classicality	193
11.9.2	Wiener-Hopf Method for Solving Integral Equations	195
11.9.3	Solving Integral Equations in Section 11.6	198
	References	200
12	Conclusions and Future Work	203
12.1	Conclusions	203
12.2	Future Work	205

Exploring Macroscopic Quantum Mechanics in
Optomechanical Devices

Miao, H.

2012, XXII, 206 p., Hardcover
