

Contents

A Cutting Hyperplane Method for Generalized Monotone Nonlipschitzian Multivalued Variational Inequalities	1
Pham Ngoc Anh and Takahito Kuno	
Robust Parameter Estimation Based on Huber Estimator in Systems of Differential Equations	13
Tanja Binder and Ekaterina Kostina	
Comparing MIQCP Solvers to a Specialised Algorithm for Mine Production Scheduling	25
Andreas Bley, Ambros M. Gleixner, Thorsten Koch, and Stefan Vigerske	
A Binary Quadratic Programming Approach to the Vehicle Positioning Problem.....	41
Ralf Borndörfer and Carlos Cardonha	
Determining Fair Ticket Prices in Public Transport by Solving a Cost Allocation Problem	53
Ralf Borndörfer and Nam-Dũng Hoàng	
A Domain Decomposition Method for Strongly Mixed Boundary Value Problems for the Poisson Equation	65
Dang Quang A and Vu Vinh Quang	
Detecting, Monitoring and Preventing Database Security Breaches in a Housing-Based Outsourcing Model.....	77
Tran Khanh Dang, Tran Thi Que Nguyet, and Truong Quynh Chi	
Real-Time Sequential Convex Programming for Optimal Control Applications	91
Tran Dinh Quoc, Carlo Savorgnan, and Moritz Diehl	

SuperQuant Financial Benchmark Suite for Performance Analysis of Grid Middlewares	103
Abhijeet Gaikwad, Viet Dung Doan, Mireille Bossy, Françoise Baude, and Frédéric Abergel	
A Dimension Adaptive Combination Technique Using Localised Adaptation Criteria	115
Jochen Garcke	
Haralick's Texture Features Computation Accelerated by GPUs for Biological Applications	127
Markus Gipp, Guillermo Marcus, Nathalie Harder, Apichat Suratane, Karl Rohr, Rainer König, and Reinhard Männer	
Free-Surface Flows over an Obstacle: Problem Revisited	139
Pamat Guayjarernpanishk and Jack Asavanant	
The Relation Between the Gene Network and the Physical Structure of Chromosomes	153
Dieter W. Heermann, Manfred Bohn, and Philipp M. Diesinger	
Generalized Bilinear System Identification with Coupling Force Variables	169
Jer-Nan Juang	
Reduced-Order Wave-Propagation Modeling Using the Eigensystem Realization Algorithm	183
Stephen A. Ketcham, Minh Q. Phan, and Harley H. Cudney	
Complementary Condensing for the Direct Multiple Shooting Method	195
Christian Kirches, Hans Georg Bock, Johannes P. Schlöder, and Sebastian Sager	
Some Inverse Problem for the Polarized-Radiation Transfer Equation	207
A.E. Kovtanyuk and I.V. Prokhorov	
Finite and Boundary Element Energy Approximations of Dirichlet Control Problems	219
Günther Of, Thanh Xuan Phan, and Olaf Steinbach	
Application of High Performance Computational Fluid Dynamics to Nose Flow	233
I. Pantle and M. Gabi	
MaxNet and TCP Reno/RED on Mice Traffic	247
Khoa T. Phan, Tuan T. Tran, Duc D. Nguyen, and Nam Thoai	

Superstable Models for Short-Duration Large-Domain Wave Propagation	257
Minh Q. Phan, Stephen A. Ketcham, Richard S. Darling, and Harley H. Cudney	
Discontinuous Galerkin as Time-Stepping Scheme for the Navier–Stokes Equations	271
Th. Richter	
Development of a Three Dimensional Euler Solver Using the Finite Volume Method on a Multiblock Structured Grid.....	283
Tran Thanh Tinh, Dang Thai Son, and Nguyen Anh Thi	
Hybrid Algorithm for Risk Conscious Chemical Batch Planning Under Uncertainty	293
Thomas Tometzki and Sebastian Engell	
On Isogeometric Analysis and Its Usage for Stress Calculation	305
Anh-Vu Vuong and B. Simeon	
On the Efficient Evaluation of Higher-Order Derivatives of Real-Valued Functions Composed of Matrix Operations.....	315
Sebastian F. Walter	
Modeling of Non-ideal Variable Pitch Valve Springs for Use in Automotive Cam Optimization	325
Henry Yau and Richard W. Longman	

Modeling, Simulation and Optimization of Complex
Processes

Proceedings of the Fourth International Conference on
High Performance Scientific Computing, March 2-6,
2009, Hanoi, Vietnam

Bock, H.G.; Phu, H.X.; Rannacher, R.; Schlöder, J. (Eds.)

2012, X, 338 p., Hardcover

ISBN: 978-3-642-25706-3
