1	Introduction	1
1.1	Nomenclature	1
1.2	A Brief Overview of Audio Presentation Methods	3
1.2.1	Audio Presentation Based on Head-related Transfer Functions	3
1.2.2	Stereophony and Surround Sound	4
1.2.3	The Acoustic Curtain	8
1.2.4	Ambisonics	10
1.2.5	Sound Field Synthesis	12
1.2.6	Directional Audio Coding	13
1.2.7	Radiation Synthesis	13
1.2.8	Summary	13
1.3	Problem Formulation	15
1.4	Numeric Approaches	17
	References	17
2	Physical Fundamentals of Sound Fields	21
2.1	The Wave Equation	21
2.1.1	General	21
2.1.2	Solutions in Cartesian Coordinates	23
2.1.3	Solutions in Spherical Coordinates	24
2.2	Representations of Sound Fields	29
2.2.1	Representation of Sound Fields as Series of Spherical Harmonics	29
2.2.2	Selected Properties of Bandlimited Spherical Harmonics Series	33
2.2.3	Multipoles	41
2.2.4	The Signature Function	41
2.2.5	Far-Field Radiation	42
2.2.6	The Wavenumber Domain	43

2.2.7	The Angular Spectrum Representation	46
2.2.8	Spatial Spectra and Spatial Bandlimitation	48
2.3	Boundary Conditions	49
2.3.1	Dirichlet Boundary Condition	49
2.3.2	Neumann Boundary Condition	49
2.3.3	Sommerfeld Radiation Condition	50
2.4	Green's Functions	51
2.5	The Rayleigh Integrals	52
2.6	The Kirchhoff-Helmholtz Integral	53
	References	54
3	Continuous Secondary Source Distributions	57
3.1	Introduction	57
3.2	Explicit Solution for Arbitrarily-Shaped Simply Connected Secondary Source Distributions	58
3.3	Explicit Solution for Spherical Secondary Source Distributions	61
3.3.1	Derivation of the Driving Function	62
3.3.2	Synthesized Sound Field	64
3.3.3	Incorporation of Secondary Sources With Complex Radiation Properties	66
3.3.4	Near-Field Compensated Higher Order Ambisonics	70
3.3.5	Higher Order Ambisonics	71
3.4	Simple Source Formulation and Equivalent Scattering Problem	73
3.5	Explicit Solution for Circular Secondary Source Distributions	75
3.5.1	Derivation of the Driving Function	76
3.5.2	Synthesized Sound Field	78
3.5.3	Incorporation of Secondary Sources With Complex Radiation Properties	79
3.6	Explicit Solution for Planar Secondary Source Distributions	83
3.6.1	Derivation of the Driving Function	83
3.6.2	Physical Interpretation of SDM	86
3.6.3	Synthesized Sound Field and Example Driving Function	86
3.7	Explicit Solution for Linear Secondary Source Distributions	87
3.7.1	Derivation of the Driving Function	87
3.7.2	Synthesized Sound Field and Example Driving Function	88
3.7.3	Incorporation of Secondary Sources With Complex Radiation Properties	92
3.7.4	Truncated Linear Secondary Source Distributions	93

3.8	Approximate Explicit Solution for Arbitrary Convex Secondary Source Distributions	95
3.8.1	Outline	95
3.8.2	Accuracy and Examples	98
3.9	Wave Field Synthesis	101
3.9.1	Planar Secondary Source Distributions	102
3.9.2	Arbitrarily Shaped Convex Secondary Source Distributions	102
3.9.3	2.5-Dimensional WFS.	103
3.9.4	A Note on Wave Field Synthesis Employing Linear Secondary Source Distributions	106
3.9.5	Summary	107
3.10	On the Scattering of Synthetic Sound Fields	107
3.10.1	Three-Dimensional Synthesis.	107
3.10.2	2.5-Dimensional Synthesis	110
3.10.3	Conclusions.	111
	References	111
4	Discrete Secondary Source Distributions.	115

4.3	Spherical Secondary Source Distributions	120
4.3.1	Discretization of the Sphere	120
4.3.2	Discretization of the Driving Function	121
4.3.3	Properties of the Synthesized Sound Field in Time-Frequency Domain.	127
4.4	Circular Secondary Source Distributions.	129
4.4.1	Discretization of the Driving Function	130
4.4.2	On the Spatial Bandwidth of Wave Field Synthesis With Circular Secondary Source Distributions.	133
4.4.3	Properties of the Synthesized Sound Field in Time-Frequency Domain.	135
4.4.4	Properties of the Synthesized Sound Field in Time Domain	140
4.4.5	Achieving a Local Increase of Accuracy.	145
4.4.6	Spatially Lowpass Secondary Sources	148
4.5	Planar Secondary Source Distributions	151
4.6	Linear Secondary Source Distributions	155
4.6.1	Discretization of the Driving Function	155
4.6.2	Properties of the Synthesized Sound Field in Time-Frequency Domain.	158
4.6.3	Properties of the Synthesized Sound Field in Time Domain	158

4.6.4	Spatial Discretization in Wave Field Synthesis Employing Linear Secondary Source Distributions	161
4.6.5	Achieving a Local Increase of Accuracy.	161
4.6.6	Spatially Lowpass Secondary Sources	164
4.7	Further Aspects of Discretization and Spatial Truncation With Planar Linear Secondary Source Distributions	168
4.8	On the Spatial Bandwidth of Numeric Solutions	169
4.9	Summary	170
	References	171
5	Applications of Sound Field Synthesis.	175
5.1	Introduction.	175
5.2	Storage and Transmission of Audio Scenes.	176
5.2.1	Representations of Audio Scenes	176
5.2.2	Audio Objects	177
5.2.3	Storage Formats.	178
5.3	Simple Virtual Sound Fields	179
5.3.1	Plane Waves	180
5.3.2	Spherical Waves	185
5.3.3	Spatial Discretization Artifacts	192
5.3.4	A Note on the Amplitude Decay	192
5.4	Virtual Sound Sources With Complex Radiation Properties.	195
5.4.1	Explicit Solution for Spherical and Circular Secondary Source Distributions (NFC-HOA)	195
5.4.2	Explicit Solution for Planar and Linear Secondary Source Distributions (SDM)	196
5.4.3	Wave Field Synthesis	196
5.4.4	Limitations	197
5.5	Spatially Extended Virtual Sound Sources	198
5.5.1	Plates Vibrating in Higher Modes	200
5.5.2	Spheres Vibrating in Higher Modes	202
5.5.3	Emitted Sound Fields	204
5.5.4	Interaural Coherence	207
5.5.5	Synthesis of Spatially Extended Virtual Sound Sources.	209
5.6	Focused Virtual Sound Sources	210
5.6.1	The Time-Reversal Approach	211
5.6.2	Angular Weighting.	214
5.6.3	Explicit Modeling	219
5.6.4	Explicit Synthesis of the Diverging Part of the Sound Field	223
5.6.5	Properties of Focused Virtual Sound Sources With Respect to Spatial Discretization	224

5.7	Moving Virtual Sound Sources	229
5.7.1	The Sound Field of a Moving Monopole Source	230
5.7.2	Wave Field Synthesis of a Moving Virtual Monopole Source.	235
5.7.3	Properties of Moving Virtual Sound Sources With Respect to Discretization and Truncation of the Secondary Source Distribution.	240
5.7.4	The Sound Field of a Moving Sound Source With Complex Radiation Properties	244
5.7.5	Wave Field Synthesis of a Moving Virtual Sound Source With Complex Radiation Properties.	246
5.7.6	Synthesis of Moving Virtual Sources Without Doppler Effect.	248
5.8	Virtual Sound Field Synthesis	249
5.9	Spatial Encoding and Decoding	250
5.9.1	Spatial Encoding	251
5.9.2	Properties of Spatially Encoded Sound Fields	252
5.9.3	Spatial Decoding in the Ambisonics Context.	253
5.9.4	Spatial Decoding Using Wave Field Synthesis.	253
5.9.5	Spatial Decoding Using the Spectral Division Method	258
5.10	Stereophony-like Techniques	259
5.10.1	Virtual Panning Spots.	259
5.10.2	Other Stereophony-like Techniques	259
5.11	Subwoofers	261
5.12	A Note on the Timing of the Source Signals.	262
5.13	Reverberation for Sound Field Synthesis.	263
5.13.1	Perceptual Properties of Reverberation	263
5.13.2	Literature Review	264
5.13.3	Unexplored Aspects	265
