

Contents

1	The universality of religious beliefs	1
1.1	The birth of religions and human culture	1
1.2	The evolution of religious beliefs	5
1.3	Western religions	8
1.4	The detachment of the spirit	10
	References	12
2	The contradictions and consequences of religious beliefs	13
2.1	Cultural and religious contradictions	13
2.2	Early spiritual beliefs	16
2.3	The contradictions between science and religion	17
2.4	The fragmentation of culture	20
2.5	Religious atrocities and shared psychotic disorders	21
2.6	The “new” religious movements and their apocalyptic predictions	22
2.7	The tragic consequences of blind faith	23
	References	26
3	The evolution of human ancestors	27
3.1	The veneration of the dead and early supernatural beliefs	27
3.2	The variety of hominids and human ancestors	30
3.3	Human language was also born in Africa	32
3.4	The evolution of the brain: from hominids to <i>Homo sapiens</i>	32
	References	35
4	The most amazing window on human nature	37
4.1	María’s brain was burning her hand	37
4.1.1	Epilepsy shows that sensations and movements are encoded in the brain	39
4.1.2	Consciousness and the mind are functions of the brain	43
4.1.3	It must be great fun to speak to the preparation	45
4.2	The missing arm that hurts	47
4.3	There is a stranger in my bed	48
4.4	Unawareness of lost function	50
4.5	Split-brain patients have a split mind	52
4.6	Alzheimer’s disease destroys the self	54

4.7	Reflections on nature's most amazing window	55
	References	57
5	Why qualia and consciousness seem mysterious	59
5.1	The puzzle of experiences and consciousness	59
5.1.1	The ineffability of experiences	61
5.1.2	The transparency of experiences	63
5.1.3	Conscious processes are maintained by specific activating systems	65
5.2	Sensing and understanding internalized information	67
5.2.1	Sensing the external world	68
5.2.2	Sensing the internal world	70
5.3	Experiences require binding for integration into consciousness	71
5.4	How qualia acquire their meaning	74
5.5	How experiences generate the self	77
	References	79
6	The word-grounding problem and the incompleteness of language	83
6.1	We live in a symbolic universe	83
6.1.1	The evolution of language and symbolism	85
6.1.2	Language is a highly sophisticated social instrument	85
6.2	The word-grounding problem	86
6.2.1	John Searle's Chinese room argument	87
6.2.2	Robots ground words or symbols in sensor data	89
6.2.3	Humans ground words in the verbal-phenomenal lexicon	90
6.3	The incompleteness of language	92
6.4	Propositional knowledge and language	94
6.5	Summary and conclusions	97
	References	97
7	The roots of knowledge	99
7.1	The neurobiology of knowledge	99
7.2	Memory is an essential property of the nervous system	100
7.3	There are different kinds of memory and learning	103
7.3.1	Different types of memory and learning are processed and stored in functionally distinct brain regions	104
7.3.2	Declarative memory can be changed into skills and habits	108
7.3.3	Memories and images are physically encoded in the brain	109
7.4	Implicit learning accounts for the knowledge of skills	112

7.5	Most knowledge results from complex forms of learning	114
7.6	Neurobiological explanations are reductionist	114
7.7	Summary and conclusions	117
	References	118
8	Abstract and imaginary objects	121
8.1	The variety of objects	121
8.2	Frege's views of abstract and mathematical objects	124
8.3	Evidence against the metaphysically abstract nature of mathematics	126
	8.3.1 Anthropological evidence from early arithmetic	127
	8.3.2 The evidence from early geometry	131
8.4	Intuitions and abstractions transport us to a symbolic universe	134
8.5	Subitizing: the implicit perception of numerosity	136
8.6	The neural bases of abstraction	138
8.7	Summary and conclusions	139
	References	140
9	Nature is logical, because logic is natural	143
9.1	The early story of logic	143
9.2	Deductive logic can be formalized	147
9.3	The problem of induction and the emergence of empiricism	149
9.4	The relevance of psychology to logic	150
9.5	The biological roots of induction	152
9.6	The naturalistic approach to inductive inference	153
9.7	The brain encodes models of the world	154
9.8	Reasoning and logical thinking are physical processes	157
9.9	The emergence of different logics	159
9.10	Concluding remarks	160
	References	161
10	Faith and the validation of beliefs	163
10.1	Faith has many meanings	163
10.2	There are inherent contradictions in religious faith	164
10.3	Childhood indoctrination	167
10.4	Mystical and trance-like experiences are delusional	169
10.5	Science and mathematics can be validated	170
10.6	Religious faith cannot be validated	172
10.7	Conclusions	175
	References	175

11	Contradictory beliefs are a poor mechanism of adaptation	177
11.1	Schizodoxia	177
11.2	Schizodoxia contributes to religious tolerance and maintenance of complex societies	180
11.3	Accepting the benefits, but not the implications of science	181
11.4	Supernatural explanations are not logically acceptable	182
11.5	The attribution of biological evolution to god is a sophisticated form of schizodoxia	184
11.6	The grim consequences of certain forms of schizodoxia	185
11.7	Schizodoxia also negates the consistency of truth	186
