## Part I Invited Articles

|  |            |
|--|------------|
| <b>Markov Bridges, Bisection and Variance Reduction .....</b>  | <b>3</b>   |
| Søren Asmussen and Asger Hobolth   |            |
| <b>Upper Bounds in Discrepancy Theory .....</b>  | <b>23</b>  |
| William W.L. Chen  |            |
| <b>Entropy, Randomization, Derandomization, and Discrepancy .....</b>  | <b>43</b>  |
| Michael Gnewuch  |            |
| <b>Asymptotic Equivalence Between Boundary Perturbations and<br/>Discrete Exit Times: Application to Simulation Schemes.....</b> | <b>79</b>  |
| E. Gobet   |            |
| <b>Stochastic Approximation of Functions and Applications.....</b>   | <b>95</b>  |
| Stefan Heinrich  |            |
| <b>On Figures of Merit for Randomly-Shifted Lattice Rules .....</b>  | <b>133</b> |
| Pierre L'Ecuyer and David Munger   |            |
| <b>A Study of the Efficiency of Exact Methods for Diffusion<br/>Simulation.....</b>  | <b>161</b> |
| Stefano Peluchetti, and Gareth O. Roberts  |            |
| <b>Polynomial Lattice Point Sets .....</b>   | <b>189</b> |
| Friedrich Pillichshammer   |            |
| <b>Liberating the Dimension for Function Approximation<br/>and Integration .....</b>   | <b>211</b> |
| G.W. Wasilkowski   |            |

## Part II Contributed Articles

|   |     |
|---|-----|
| <b>A Component-by-Component Construction for the Trigonometric Degree</b> .....   | 235 |
| Nico Achtsis and Dirk Nuyens  |     |
| <b>Scrambled Polynomial Lattice Rules for Infinite-Dimensional Integration</b> .....  | 255 |
| Jan Baldeaux  |     |
| <b>Geometric and Statistical Properties of Pseudorandom Number Generators Based on Multiple Recursive Transformations</b> .....   | 265 |
| L. Yu. Barash   |     |
| <b>Computing Greeks Using Multilevel Path Simulation</b> .....  | 281 |
| Sylvestre Burgos and Michael B. Giles   |     |
| <b>Weight Monte Carlo Method Applied to Acceleration Oriented Traffic Flow Model</b> .....  | 297 |
| Aleksandr Burmistrov and Mariya Korotchenko   |     |
| <b>New Inputs and Methods for Markov Chain Quasi-Monte Carlo</b> .....  | 313 |
| Su Chen, Makoto Matsumoto, Takuji Nishimura, and Art B. Owen  |     |
| <b>Average Case Approximation: Convergence and Tractability of Gaussian Kernels</b> .....   | 329 |
| G.E. Fasshauer, F.J. Hickernell, and H. Woźniakowski  |     |
| <b>Extensions of Atanassov's Methods for Halton Sequences</b> .....   | 345 |
| Henri Faure, Christiane Lemieux, and Xiaoheng Wang  |     |
| <b>Applicability of Subsampling Bootstrap Methods in Markov Chain Monte Carlo</b> .....   | 363 |
| James M. Flegal   |     |
| <b>QMC Computation of Confidence Intervals for a Sleep Performance Model</b> .....  | 373 |
| Alan Genz and Amber Smith   |     |
| <b>Options Pricing for Several Maturities in a Jump-Diffusion Model</b> .....   | 385 |
| Anatoly Gormin and Yuri Kashtanov   |     |
| <b>Enumerating Quasi-Monte Carlo Point Sequences in Elementary Intervals</b> .....  | 399 |
| Leonhard Grünschoß, Matthias Raab, and Alexander Keller   |     |
| <b>Importance Sampling Estimation of Joint Default Probability under Structural-Form Models with Stochastic Correlation</b> ..... | 409 |
| Chuan-Hsiang Han  |     |

|   |     |
|---|-----|
| <b>Spatial/Angular Contribution Maps for Improved Adaptive Monte Carlo Algorithms</b> .....   | 419 |
| Carole Kay Hayakawa, Rong Kong, and Jerome Spanier  |     |
| <b>Hybrid Function Systems in the Theory of Uniform Distribution of Sequences</b> .....   | 435 |
| Peter Hellekalek  |     |
| <b>An Intermediate Bound on the Star Discrepancy</b> .....  | 451 |
| Stephen Joe   |     |
| <b>On Monte Carlo and Quasi-Monte Carlo Methods for Series Representation of Infinitely Divisible Laws</b> .....                      | 471 |
| Reiichiro Kawai and Junichi Imai  |     |
| <b>Parallel Quasi-Monte Carlo Integration by Partitioning Low Discrepancy Sequences</b> .....   | 487 |
| Alexander Keller and Leonhard Grünschloß  |     |
| <b>Quasi-Monte Carlo Progressive Photon Mapping</b> .....   | 499 |
| Alexander Keller, Leonhard Grünschloß, and Marc Droske  |     |
| <b>Value Monte Carlo Algorithms for Estimating the Solution to the Coagulation Equation</b> .....                                     | 511 |
| Mariya Korotchenko  |     |
| <b>Numerical Simulation of the Drop Size Distribution in a Spray</b> .....  | 523 |
| Christian Lécot, Moussa Tembely, Arthur Soucemarianadin, and Ali Tarhini  |     |
| <b>Nonasymptotic Bounds on the Mean Square Error for MCMC Estimates via Renewal Techniques</b> .....                                  | 539 |
| Krzysztof Łatuszyński, Błażej Miasojedow, and Wojciech Niemiro  |     |
| <b>Accelerating the Convergence of Lattice Methods by Importance Sampling-Based Transformations</b> .....                             | 557 |
| Earl Maize, John Sepikas, and Jerome Spanier  |     |
| <b>Exact Simulation of Occupation Times</b> .....   | 573 |
| Roman N. Makarov and Karl Wouterloot  |     |
| <b>A Global Adaptive Quasi-Monte Carlo Algorithm for Functions of Low Truncation Dimension Applied to Problems from Finance</b> ..... | 589 |
| Dirk Nuyens and Benjamin J. Waterhouse  |     |
| <b>Random and Deterministic Digit Permutations of the Halton Sequence*</b> .....  | 609 |
| Giray Ökten, Manan Shah, and Yevgeny Goncharov  |     |

|  |            |
|--|------------|
| <b>A Quasi Monte Carlo Method for Large-Scale Inverse Problems .....</b>   | <b>623</b> |
| Nick Polydorides, Mengdi Wang, and Dimitri P. Bertsekas  |            |
| <b>In Search for Good Chebyshev Lattices .....</b>   | <b>639</b> |
| Koen Poppe and Ronald Cools  |            |
| <b>Approximation of Functions from a Hilbert Space Using<br/>Function Values or General Linear Information .....</b> | <b>655</b> |
| Ralph Tandetzky  |            |
| <b>High Order Weak Approximation Schemes for Lévy-Driven SDEs .....</b>  | <b>667</b> |

Monte Carlo and Quasi-Monte Carlo Methods 2010

Plaskota, L.; Woźniakowski, H. (Eds.)

2012, XII, 732 p. 103 illus., 40 illus. in color., Hardcover

ISBN: 978-3-642-27439-8
