Part I Experimental Determination of Interfacial Stress Changes in Electrochemical Systems

1	Introduction and Basic Concepts	3
1.1	Issues Related to Electrified Interfaces and Electrocapillarity: Some Introductory Remarks	3
1.2	Selected Concepts and Definitions in Electrochemistry and Surface Science	4
1.2.1	What Is an “Electrode” and What Is a “Solid Electrode”?	5
1.2.2	Surface, Interface, and Interphase	7
1.2.3	Elastic and Plastic Surface Strains	8
1.2.4	“Surface Stress” or “Interfacial Stress”?	10
	References	11
2	Elements of the Thermodynamic Theory of Electrified Interfaces . . .	13
2.1	Introduction	13
2.2	Basic Concepts and Notions	13
2.3	Gibbs and Guggenheim Model of the Interface	14
2.4	Adsorption	17
2.5	The Electrocapillary Equation and the Lippmann Equation	25
2.5.1	Example for the Application of the Electrocapillary Equation	28
2.5.2	The Ideally Polarizable Electrode when There Is no Complete Equilibrium Established Between the Bulk of a Solid and the Interface	30
2.5.3	Additional Remarks	31
	References	32

3	Some Problems Related to the Surface Thermodynamics of “Solid Electrodes”	33
3.1	The “Generalized Lippmann Equation”	33
3.1.1	On the Derivation of the Generalized Lippmann Equation	34
3.1.2	On the Derivation of the Shuttleworth Equation	37
	References	38
4	Experimental Methods for the Measurement of Surface Stress Changes	41
4.1	Introduction	41
4.2	The Piezoelectric Method	43
4.3	The Extensometer Method and Related Techniques	46
4.4	Contact Angle Measurements	55
4.5	Bending Plate and Bending Beam Methods	58
	References	70
5	Optical Detection of the Deformation	75
5.1	Direct Optical Position Sensing	75
5.1.1	Experimental Arrangements	75
5.1.2	Basic Principles	77
5.1.3	Effect of Refraction	80
5.1.4	Effects of Nonnormal Incidence	84
5.1.5	Other Possible Sources of Errors	91
5.2	Interferometric Detection	96
5.2.1	Principles of Interferometry	96
5.2.2	The Kösters Laser Interferometer	98
5.2.3	Electrochemical Application	99
5.2.4	Adjustment of the Interferometer	101
5.2.5	Design of the Electrochemical Cell	102
5.2.6	Calibration	104
5.2.7	Detection of the Light Intensity	107
5.2.8	Fast Kösters Interferometry	107
5.2.9	Measurement of (Surface) Mass Changes	108
5.2.10	Holographic Interferometry	110
	References	111
6	Detection of the Cantilever Deflection by Microscopy	115
6.1	Scanning Tunneling Microscopy	115
6.2	Atomic Force Microscopy	117
	References	118
7	Applications: Selected Experimental Results	121
7.1	Introduction	121
7.2	Platinum and Gold in Contact with Electrolyte Solutions	121
7.3	Stress Changes in Thin Films and Layers on Metals	128

7.3.1	Anodic Films and Passive Layers	128
7.3.2	Monitoring of the Electrochemical Degradation of Polymer Films	129
7.3.3	Insertion of Species into Materials, Absorption, and Intercalation	133
	References	134
8	Mathematical Methods in Interfacial Thermodynamics	137
8.1	Important Mathematical Concepts	137
8.1.1	Homogeneous Functions	137
8.1.2	Legendre Transformation	151
	References	155
Part II Probe Beam Deflection (PBD)		
9	Introduction to Probe Beam Deflection Techniques	159
9.1	Introduction	159
9.2	Importance of the Field	159
9.3	History	160
	References	162
10	Basic Principles of Probe Beam Deflection Techniques	167
10.1	Optical Principles	167
10.2	Theoretical Framework of Probe Beam Deflection	169
10.3	Probe Beam Deflection Techniques	171
10.3.1	Potential Step Chronodeflectometry	171
10.3.2	Pulse Voltadeflectometry (PVD)	180
10.3.3	Current Step Chronodeflectometry	183
10.3.4	Alternating Current Deflectometry (ACD)	185
10.3.5	Cyclic Voltadeflectometry	185
10.3.6	Water Concentration Effects	194
10.3.7	Thermal Effects	194
10.4	Experimental Probe Beam Deflection Setup	194
10.5	Values of the Variation of Refractive Index with Concentration . .	196
	References	196
11	Application of Probe Beam Deflection Techniques to the Study of Surface-Confined Electrochemical Systems	199
11.1	Introduction	199
11.2	Noble Metal Electrode Surfaces	199
11.3	Carbon Materials	201
11.4	Underpotential Deposition	201
11.5	Anion Adsorption on Metals	202
11.6	Electroactive Thin Films	204

11.6.1	Electrochromic Oxides	205
11.6.2	Inorganic Complex Films	209
11.6.3	Electroactive Polymer Films	209
11.6.4	Other Electroactive Polymers	219
11.7	Nanostructured Systems	220
11.7.1	Determination of the Potential of Zero Charge of Porous Carbon	220
11.7.2	Determination of pzc of Nanostructured Pt	222
11.7.3	Double Layer Charging of Monolithic Nanoporous Carbon	224
11.7.4	Hierarchical Porous Carbon Structures	224
11.7.5	CO Oxidation on Nanostructured Pt Electrodes	225
11.7.6	Layer-by-Layer Self-Assembled Monolayers	229
	References	230
12	Application of Probe Beam Deflection to Solution Electrochemical Systems	237
12.1	Introduction	237
12.2	Ferricyanide $[\text{Fe}(\text{CN})_6]^{3-}$ Reduction	237
12.3	Ferric Ion (Fe^{3+}) Reduction	238
12.4	Oxygen Reduction	239
12.5	Oxidation of Small Organic Molecules	240
12.6	Metal Deposition and Corrosion	240
12.7	Silicon Corrosion	240
12.8	Thiophene Polymerization	241
	References	241
13	In Situ Electrochemical Photothermal Deflection Techniques	243
13.1	Basic Principles	243
13.2	Photothermal Deflection Techniques	245
13.2.1	Continuous Excitation	245
13.2.2	Pulsed Excitation	245
13.2.3	Sinusoidal Periodic Perturbation	247
13.3	Probe Beam Deflection Spectroscopy	248
13.3.1	General Principles	248
13.3.2	Square Wave Periodic Perturbation	249
13.4	Photothermal Monitoring of Concentration Gradients	251
13.5	Experimental Setup	251
13.6	Photothermal Deflection: Experimental Results	253
13.6.1	In Situ PDS of Soluble Species	254
13.6.2	In Situ PDS of Surface Films	254
13.6.3	Voltammetric Absorptiometry	256
13.7	Conclusions	259
	References	260

14 Comparison of Probe Beam Deflection Techniques with Other Methods to Monitor Fluxes of Mobile Species	263
14.1 Introduction	263
14.2 Electrochemical Techniques	263
14.2.1 Ring-Disk Voltammetry	264
14.2.2 Scanning Electrochemical Microscopy	265
14.3 Electrochemical Quartz Crystal Microbalance	266
14.4 Spectroelectrochemistry	268
14.4.1 UV–Visible Spectroscopy with Indicator Dyes	268
14.4.2 In Situ FTIR Spectroscopy	269
14.4.3 In Situ Raman Spectroscopy	270
14.5 Radiotracer Detection	270
14.6 Surface Plasmon Resonance	270
14.7 Interferometry	271
14.8 Conclusions	272
References	272
