Contents

1 Introduction 1
1.1 Motivation 2
1.2 Methodology 4
1.3 Outline of the Dissertation, Major Contributions and Reference to Prior Publications 5
References 9

2 Limiting Obstacles to Success of RFID and the EPCglobal Network in Logistics 11
2.1 Historical Development 12
2.2 Radio-Frequency Identification: Technical Fundamentals 13
2.3 Present and Future RFID Market Development 18
2.3.1 Aberdeen Group 20
2.3.2 ABI Research 24
2.3.3 BMWI: Bundesministerium für Wirtschaft und Technologie 26
2.3.4 Deutsche Bank Research 27
2.3.5 FTK: Forschungsinstitut für Telekommunikation e.V. . 29
2.3.6 Gartner 30
2.3.7 IDTechEx 31
2.3.8 IIG: Institut für Informatik und Gesellschaft 34
2.3.9 Juniper Research 35
2.3.10 Analysis Summary 35
2.4 The EPCglobal Architecture Framework 36
2.5 The Business Model of the EPCglobal Architecture Framework 42
2.6 The Vision of the Internet of Things 44
2.7 Summary of Limiting Obstacles to Success of RFID and the EPCglobal Architecture 51
References 51

3 Electronic Information Sharing in Supply Networks 57
3.1 Similarities and Differences Between EDI, RFID and the EPCglobal Architecture 58
3.2 Growing Complexity in n-to-m Information Sharing 60
3.3 The Agile Internet of Things Enabled Right-Time Enterprise . . 62
3.4 Semiotics and the Internet of Things 63
3.5 Information Deficiencies and Uncertainty in the Internet of Things 66
3.6 Summary of Electronic Information Sharing in Supply Networks 67
References 68

4 Performance Measurement and Cost Benefit Analysis for RFID and Internet of Things Implementations in Logistics 71
4.1 Measuring Costs and Benefits of RFID Implementations 71
4.1.1 Costs of RFID and Internet of Things Adoption 75
4.1.2 Benefits of RFID and the Internet of Things 81
4.2 Example of Uneven Cost Benefit Allocation in the Beverage Supply Chain 90
4.3 Cost Benefit Sharing and Its Limitations 93
4.4 Summary Performance Measuring As Well As Cost Benefit Sharing Approaches and Deduction of an Alternative Market Driven Approach 95
References 96

5 Preconditions for Creating Economic Value Through Market-Driven Information Pricing and Billing in B2B Scenarios 101
5.1 Separating the Value of Information from Other Value Carrying Offerings 101
5.2 Differences in Product and Information Pricing 102
5.3 Requirements for Payment Systems in B2B Information Sharing 105
5.4 Summary of Findings 111
References 111

6 Modelling and Prototyping an Integration of Billing Mechanisms into the EPCglobal Network Architecture 113
6.1 Technical Integration Options of Billing-Solutions 113
6.1.1 Subscriber Identification at Hardware Level 113
6.1.2 Subscriber Identification at Software (EPCIS) Level . . . 114
6.1.3 Comparison and Discussion 115
6.2 Choosing an Appropriate Billing Solution for a Technical Prototype 117
6.3 A Technical Framework for a Billing Integrated EPCglobal Network 118

6.4 Summary of the Technical Solution Model and Its Prototype . . 121
References 122

7 Evaluation of the Technical Billing-Enabled Internet of Things Framework 123
7.1 The Business Model for a Billing-Enabled Internet of Things . . 123
7.2 Verification of the Technical Model in a Lab-based Beverage Supply Chain Scenario 125
7.3 Threats Concerning the Success of the Provided Model 132
7.4 New Opportunities and Improvements Through Billing Integration in the Internet of Things 133
7.5 Summary of Evaluation Research Results 136
References 136

8 Conclusion 139
References 141
